RARE AND DESIRABLE, VINTAGE SWBC ITEMS FOR YOUR SHACK!

a.) THE DX EDGE!!! Totally cool 1970s DX tool for determining daylight/darkness terminator's path at any time. Consists of 12 hard clear plastic sheets with terminator drawn, plus a large map plastic guide within which the terminator plastics slide back and forth, depending on month/time. Very effective. Grayline Dxers NEED one of these. $25

b.) QSLER'S DELIGHT: Four books to make you a better verie hunter. "LA Commercials" by Klemetz/Ingelstrong of DSWCI; "Secrets of Successful QSLing" both small and large versions and "QSL Address Book" by Dexter. $32.

1. DXER'S LIBRARY: Some great reading in this lot: "Shortwave Receivers, Past & Present" by Osterman; "Low-Band Dxing" (ham band 160, 80, 40, but some great takeaway knowledge for SWBC Dxers, too); and "1934 Official SW Manual (reprint). $35 for these three bound books, in super condition.

2. STOCKPILE OF PREPARED SPANISH & INDONESIAN QSL CARDS! Here's a stack, about 6 inches high, of multicolored prepared QSL cards in SS and Indo, handy for verifying those out-of-the-way stations. Spanish cards are in the famed "Certificado de Sintonia" format (the originals). Probably more than 600 cards, ready to go. $30 takes 'em all.

3. COMPREHENSIVE FOREIGN LANGUAGE REPORTING GUIDES: Full set, like new, of Tiare's "Language Lab" bound reporting manuals for Spanish (2 copies), French, Indonesia, Portuguese. Each lang guide more than 50 pages long and contains everything needed to send a proper reception report in that language. $25 for 5 books!

4. RARE! 2 INDONESIAN ATLASES: Purchased in Jakarta, invaluable to the Indo Dxer. "Atlas Ganaco" a 9"x14" softcover book, 32 color pages, covering Indonesia by region, plus the world. A solid reference, but the REAL PRIZE, is "Peta Buta", an 8.5x11.5-inch 64-page line drawing style atlas for schools. Shows detailed local political boundaries within Indonesia, including provincial boundaries for all of the country, plus all the teensy RPDK cities. Invaluable to understanding the "Tingkat Dua" (second level) radio stations. $25.

5. DSWCI TROPICAL BAND SURVEYS, 1977-85: Nine years of the famous survey, all here. $20 for all.

6. DX LIBRARY GRAB BAG: "Radio Database Internationall" (Winter/Spring 84) (2 copies); Tiare's "Limited Space Antenna Solutions" and "Clandestine Confidential"; "Time Service Publication" by the U.S. Naval Observatory, covering world's time signal stations; and "So You Bought a Shortwave Radio"

by Gerry Dexter.
$18 for all of this!

7. WORLD RADIO TV HANDBOOKS!!! Complete your collection's gaps now!
 1984 thru 1988 - fine to near mint condition, $12 each
-- 1990 thru 1992 - near mint condition, $11 each

8. "NUMERO UNO" weekly private DX newsletter: Complete 1972-84 run from the heyday of Don Jensen's legendary DX weekly in three fat binders, each jammed with DX news, pioneering reports on rare DX stations, feature articles, controversy, you name it! Full-sized 8.5 x 11 sheets, a stack of paper 9-nches thick, 600 issues. Won't break this up, to be sold as one lot. $225 firm.

9. FINE TUNING: Another mother lode, early issues from late 1970s / early 1980s. Dan Ferguson's private circulation DX every-couple-weekly: issues 1-70, 113-140, 172-239. One fat binder, stuffed! $45.

10. "THE RADIO BOYS SEARCH FOR THE INCA'S TREASURE": 1922 hardbound "Hardy Boys" type of radio fan's novel for kids, super condition. No diehard LA Dxer's shack is complete without this! $40.

11. SOUTH AMERICAN HANDBOOK (2): Classic reference, and the historical stuff doesn't age. Maps and geographic info make this a shack library must-have. Save $20 and buy a used copy! 1983 - $8. 1976 - $6.

12. BROADCASTING STATIONS NS OF THE WORLD (FBIS), I & II, 1974. Nice condition, 500 pgs of data from the US govt's listening posts. $10.

13. REVIEW OF INT'L BCSTG: 1983-84 Issues No. 75-87, $3.

14. GRAB BAG OF RADIO REFERENCE BOOKS: Japan's "BCL"; "DXing According to NASWA"; Radio Amateur's Handbook 1973; The ARRL Antenna Book. Take "em all for only $12

15. DANISH SW CLUB INTL BULLETINS: 3/73 TO 7/80, three fat binders chock full of info. Also, bulletins from the Finnish DX Club, 1967/68/71/72. Only $20 for all of it!

16. VINTAGE FRENDX!!!!!!! A lonnnnnnng run of the monthly publication of the North American Shortwave Association, FRENDX, from Jan 1971 through May 1984! That's 160 issues of nostalgia, news, radio information and feature articles, old names and faces, history of stations, etc. Virtually priceless! ..... but for you, the entire lot goes for $250, just a shade over a lousy buck-fifty an issue. You'll never buy such great reading, so cheaply, again in your life ! (Bonus: a free year of SPEEDX, just for fun.)

17. ANDES FOLKLORICO MUSIC ALBUMS!!!!!!!! For Latin DX specialists: Imported LP albums from Ecuador, Peru, Bolivia, featuring the hauntingly beautiful music from the Andes. Finally, learn the difference between a huayno and a passacalle! Assortments of 3 albums for $20 per lot, or lot of 10 albums for $50. Total of 50 albums available to sell and I will

assemble balanced assortments (HC/OA/CP). Also, these are 20 years old and look to be in tremendous condition, but I can't guarantee that they will all play like new and some warping is probable.

IN ADDITION TO ALL PRICES ABOVE, BUYER PAYS SHIPPING/HANDLING.

Here's the deal you have been waiting for.

I have for sale a Kenwood TS-940SAT 9 mil serial no.plus. It comes with the following options: SP-940 Speaker, Built in antenna tuner, VS-1 voice synthesizer, YK-88S SSB filter, YK-88A AM filter, YK-88C CW filter, YG-455C-1 CW Xtal filter, Hand Mic, Service Manual,Instruction Manual, and the original box. Asking $ 1000..00 + shipping. Condition is excellent/good.It does have a scratch on the top center front. That is the only flaw. The front of the radio is mint.
Electrically excellent.
Non-smoker.
What more could you ask for in a radio.....
Please e-mail for inquires.
Mike N2OZO

There is an artical in the Sept 1996 issue of QST. Page 78.

It states they are special slected 1N21 for operation in the square law area. There is a Struthers part number given as an example SS-13154-1-n where the n is a digit that identifies the diode to a specific plugin. The artical sujusts that if you have a number of the diodes, you can try them and probably find one that will work. Test in the range so that 50 mv across the 2 K ohm meter movement gives full scale. If the diode operates in the square law region at this power level and is sensitive for the low power level, it should work.

Probably most of the diodes will work, but will not be accurate.

Guess that you know that you can take the knob off the top and there is a seperate adjusting screw for each power range under the cover plate.

Here's what I got. No price is set in stone, I'm sure I'm probably off base with some of it :) If I am, I'm sure you'll be more than happy to "inform" me otherwise :)

Computer (most of it): Cyrix P200+, Otto mainboard (specs on request), 3.5 floppy, Enlight Mid-Tower AT 250W case, new ATI Xpert98 3D/2D accelerator card, new 16bit/3D Yamaha 719 sound card, new 3 button mouse. No harddrive, CD-Rom or ram. $400.00

R/S HTX-212 2m mobile (I think most are familiar with this one :) $150.00
TrippLite PR-12 12A Power Supply 9ACont.-12A ICS. Used for above radio. $65.00
Cushcraft AR-2 2m Ringo Vertical antenna, great for attics only 3.9' tall $30.00
Arrow Antenna 2m 3 element beam w/ Magnavox LD rotor. In attic too. $70.00
Yaesu FT-2500M 2m mobile w/ optional CTCSS board. $225.00 Nice radio!
Diamond SG-7500NMO 2m/70cm 3.5/6.0 dB mobile antenna with nmo large magnet mount. $55.00 This antenna rocks!
Bencher BY1 Iambic paddle with MFJ 407C keyer, I purchased both as demos from HRO less than 6 months ago. $65.00 for paddles, $50.00 for keyer or $105.00 for both.
R.L.Drake TV3300LP 1kw filter. $15.00
R/S Digital Sound Level Meter. $40.00 This ones for the audiophiles :)
R/S Gordon West Learning Morse Code cassettes $10.00
R/S Benchtop Digital Multimeter (new from warranty replacement) $75.00 Specs on request.
Lowrance X-65 fishfinder with speed/temp sensor (still shrinkwrapped). $250.00
Oh almost forgot, a 486SX25 (yes pathetic I know) processor only. $15.00 obo

Still digging around so keep an eye out :)

For Sale:

(1) Motorola P100 UHF portable radio. 6 channel, 4 watt. Excellent physical condition and operating condition. All factory tags intact. Needs new battery, the one on the radio will not hold charge for long.

Includes whip antenna, standard rate desk charger, speaker-mic which is also in excellent condition. Would be a great addition to someone already using P100's and who wants to add another practically new model. $135/ offer.

will e-mail photos to those interested.

Jim

2476. anti-muting tuning mod for Sony 2010

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-27 00:00:00 UTC
From: Will White <wcw@asu.uswest.net>
Message-ID: <36D80ECB.A2833303@asu.uswest.net>
Source record: 115588

I read somewhere a while back that there is a mod for the Sony 2010 SWL receiver that allows tuning without the receiver muting in between 100 Hz steps. Allegedly, it really improves tuning weak stations and tuning under heavy QRM. Sounds sensible to me. I'd be happy if it just removed the "thumping" between tuning steps and the accompanying flicker of the S-meter and rapid peaking/nulling of the audio.

Can someone point me to a net-based or print source for this mod? I have

the Sony service manual, schematics included, so if someone can guide me to the info I need to perform this mod, or describe even just the general principle (if such things can be safely generalized, hi, hi) I'd

be forever in your debt. Well, OK, for a few hours anyway. . .

2495. FS: Tube Power Supply

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-27 00:00:00 UTC
From: yulius@shay.ecn.purdue.edu
Message-ID: <7b9ffb$2lp$1@mozo.cc.purdue.edu>
Source record: 115607

Hello,

I have a high voltage tube power supply forsale. This tube power supply uses the UTC S42 power transformer. The 1962 Allied catalog lists it as their highest price power transformer, with the following specs at 115V, 50-60 Hz: 1200/1050@300 ma VCT; Rect. Fil. 5V, 6A; Fil. 1 = 7.5V tapped 6.3V, 3A; Fil. 2 = 6.3V, 3A. Large choke (unknown manufacturer), Gudeman 10 uF/600V oil cap. All on black metal chassis with ceramic tube sockets, umbilical cords, power switch. Picture of the power supply:

http://expert.cc.purdue.edu/~yulius/utc.html

Transformers is guaranteed. Two 5R4G rectifier tubes are tested strong. Otherwise, it is sold as is due to its age. I am asking for $65 + UPS shipping.

If you are interested, please send email to yulius@ecn.purdue.edu.

Best regards,

Aristo Yulius

No reason to "work" Yaesu...just find yourself a knowledgable, honest dealer.

Current production models of the VX-5R contain the "8C03" coding in
their serial numbers. This is at least the 3rd production run (8N01 and 8N02
were previous production runs).

SOURCE: Dale at HRO, Anaheim (whose Manager's significant other is a
big-wig at Yaesu).

These suckers are so darn cheap, it's getting real tempting. Any pros or cons?

I've read the QST review, but wonder what the practical experience has been out there.

I'm planning to use them mostly for the FRS equivalent, i.e. use with other hams at hamfests and while travelling to communicate from car to car with other hams (and maybe, just maybe to get my wife interested enough to get a license).

For the above use, I'm betting that the 440 actually might be better than the 2 meter unit.

2513. WANTED ICOM- TRADE YEASU ****

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-27 00:00:00 UTC
From: dbbadge@aol.com
Message-ID: <19990226194441.11202.00000705@ng-cc1.aol.com>
Source record: 115639

Wanted ICOM< Kenwood, handheld, or even mobile that has been modded to TX RX 140-160 Mhz. I have for trade a Yaesu FT-50R like new TX-RX about everywhere UHF to 490, VHV from Air to 210 Mhz, Receives air, CELL. Comes with two batteries, charger,manual. Email me with what you have to trade. HAMS from Maryland please do not reply, one of your own, Dennis Weal has already cheated me.

2514. cb equipment

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-27 00:00:00 UTC
From: davew@wizzards.net
Message-ID: <N.022699.164544.93@davew.wizzards.net>
Source record: 115640

It's been difficult getting an answer to this.

Please don't refer me to a web page as I don't know what I need to begin with.

I want my two cars and home to all be tied in together with cb's so we can all communicate back and forth.

What exactly will I need to accomplish this?

2515. < FS - Ameritron ALS-500M HF Amp >

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-27 00:00:00 UTC

2521. Help, manual needed Atlas 215

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-27 00:00:00 UTC
From: k3fh@aol.com
Message-ID: <19990226215111.26585.00000977@ng152.aol.com>
Source record: 115647

A friend of mine needs a manual for an Atlas 215 (I think that's the correct model number). He has a problem connecting a straight key and operating CW. When going into CW mode for tuning-up purposes the rig works ok but his key will not key the rig. He got this rig from a Silent Key a year or 2 back and just upgraded so he would like to find a manual with a schematic. He has no packet or e-mail capability so please respond to my e-mail address or to the newsgroup.

Thanks and 73 de Mike K3FH

I have one if you don't find any out there. I had purchased it 2 yrs ago and only used it in the house a few times and have never had it mobile. It is not mint, but I do have both supplies for it and the manual. I am really not sure of what it may be worth as I really had forgotten about it as i just moved and haven't had a chance to put up an antenna as yet. Maybe you have an Idea of the value??? Source record: 115661

Menu functions can be assigned to the 4 controll buttons on the mic.
Power, mode, filter, mic gain, etc. Good for CW, nice sidetone and QSK.
Used mine at home and mobile. With the AT-50 tuner it's a wonderfull
package and the prices are right. For a little more money the IC-706 has
many more capabilities. If you don't like menu systems you might not
like the 706. Traded my TS-50 for a TS-940 and kept the 706. I'm talkin
used here. GL

except for the need

2543. Help with diode in wattmeter (URM-120)

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-27 00:00:00 UTC
From: nw2m@qsl.net
Message-ID: <7b8oso$8s0$1@nnrp1.dejanews.com>
Source record: 115669
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.botanchors,rec.radio.amateur.homebrew

Greetings,

I have a Struthers URM-120 wattmeter from the 1960's. I blew one of the diodes in the 2-30MHz slug. :-(The diode has a marking of:

ALPHA D4190-A 8703

It is about 3/4 of an inch long and looks like a 22 bullet with a point.

Are these special diodes, or simply in this form factor to be simply "dropped-in"? I have access to a hobby lathe and can make a plastic "shell" where a conventional diode can be placed inside. Are the diodes typically your off the shelf items, silicon, germanium, schottky, etc?

Need help with a direct replacement, or equivalent that I can make into the form factor.

Any thoughts or recommendations on diode performance over the HF band (3-30MHz) would also be helpful. Something tells me that a high performance switching diode would work just fine.... as the military stuff is over engineered for good reasons. I will look in the ARRL books to see what they use in their 2-30MHz watt meters.

Thanks in advance,

Al, NW2M

I have a Struthers URM-120 wattmeter from the 1960's. I blew one of the diodes in the 2-30MHz slug. :-(The diode has a marking of:

ALPHA D4190-A 8703

It is about 3/4 of an inch long and looks like a 22 bullet with a point.

Are these special diodes, or simply in this form factor to be simply "dropped-in"? I have access to a hobby lathe and can make a plastic "shell" where a conventional diode can be placed inside. Are the diodes typically your off the shelf items, silicon, germanium, schottky, etc?

Need help with a direct replacement, or equivalent that I can make into the form factor.

Any thoughts or recommendations on diode performance over the HF band (3-30MHz) would also be helpful. Something tells me that a high performance switching diode would work just fine.... as the military stuff is over engineered for good reasons. I will look in the ARRL books to see what they use in their 2-30MHz watt meters.

Thanks in advance,

Al, NW2M

Ya... I access this ng from my house, which has a ham-radio in one room, and
my house is sitting on dirt, and the dirt's on a planet called Earth and
cars drive in front of my house, and there's 3 cats in it, and my neighbors
are retired, and......
I guess just about everything's appropriate for this ng...

Jim, VR3 is the Dev. Adj and VR-1 is the S-Meter adjustment
inbetween these two are two VR adjusters that are attached to each
other. The one on the left is the Mid Pwr adjustment VR-5. You might be
able to turn up your mid power to 30, if not, try the varriable resistor
next to VR-5 I think that is high power adjustment.

Is it just me or are all new radios these days
prone to more and more bugs? I admit I have
only been in amateur radio since March, 1993,
but almost every new radio toy I purchase these
days has bugs. You have to wait a year until the
product stabilizes.

Amateur radio rigs (and scanners) are now almost
"Microsoft-like" : release the product and let the
customer debug it!

2559. Drake R8B Sound Enhancement

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-28 00:00:00 UTC
From: Michael <MKlevickis@worldnet.att.net>
Message-ID: <36D9BF5C.7631@worldnet.att.net>
Source record: 115427

I operate a Drake R8B primarily to receive commercial voice transmissions. Although this is a decent radio, the sound quality from the internal speaker leaves something to be desired. I have considered adding either a Grove SP 200-B Sound Enhancer or a JPS or MFJ Digital Signal Processor to improve the sound quality and readability.

Has anyone had any experience with any of these units? I would appreciate suggestions and reasons for choosing one over the other. I have read that some DSP's distort voice transmissions because of a signal processing delay. Is this a problem with either the JPS of MFJ units?

Any comments would be appreciated.

Michael

Well of course you get what you pay for but I've been very happy with
my 949E. It's not a top of the line tuner by any means but it tunes
my 260' wire loop from 10-80 meters just fine. I would recommend it
without hesitation.

Larry Benko a crit dans le message <36D981E6.D2747FEC@aztek-eng.com>...
|I too have a VX-5R, S/N 8N02--- and side by side tone squelch
|comparisons with my W32A (1 HT held to each ear) show that the
|VX-5R opens the squelch later than the W32A but just by a fraction
|of a second, no where near the 1-3 sec. that some experience.
|General scanning seems to indicate that the VX-5R does stop at
|repeaters with a subaudible tone (and the VX-5R set to tone squelch).
|However if it sometimes did not stop, I'm not sure that I would
|know. I mainly bought the VX-5R to use for foxhunts and the
|all metal case works well when close in. Also being able to tune
|to the other side of the 1st IF (e.g. 146MHz + 2*47.5MHz) with
|about 30 db. of signal attn. again works well. All in all, I like
|the VX-5R but I too wish the tone decoding was a little faster. By
|the way when I got the VX-5R I received several comments about weak
|audio. However after turning up the audio pots. (for all 3 bands)
|this comment has gone away. The pots. are located under the
|sticky label in the battery compartment that covers the temp./
|barometric pressure unit.

In practically mint condition. Has a microscopic ding near the meter, rear panel still shiny as new, covers show normal use, near new. True 9.7 out of 10. Was obtained from a divorce sale, used only a few months when new, has been boxed since. Includes D-104 non-amplified mike in excellent working condition, chrome still good, base was poorly repainted and felt replaced poorly. Will throw in spare set of new 6146W matched final tubes. The ones in it don't need replacing now, but might some day. Have original box and copy of owners manual in binder/folder. $335 plus shipping and overboxing from Myrtle Beach, SC 29577. The original box is cheap chinese cardboard, and won't hold up to the rigors of shipping, so it MUST be overboxed prior to shipment. 73, -Web

Hi Mark,

The mods for the 930 to provide full frequency xmit are in the "mods" archive
on QRZ.COM, it is a relatively
simple fix (one jumper wire to solder in if I remember correctly). That will
get you the WARC and MARS,
18M, 30M, etc.. just be careful not to transmit out of legal bands :)

Source record: 115443

The Kenwood mics that were "designed" for the rig should be in the "options" section in the back of your manual, although any good mic will do. The 930 has a jumper inside to switch between high/low impedance mic's. I used a nice Johnson mic with my 930 as long as I had it and I got great reports. The 930 has excellent audio... so any good mic will do... if you just want to keep it all Kenwood, then the MC-60 is nice :)

2576. FS: rack-mount military 2m amp (4CX250B) for conversion

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-28 00:00:00 UTC
From: kr4wmNO@SPAMbigfoot.com
Message-ID: <MPG.1143bdffe540ace9896b0@news.infoave.net>
Source record: 115444

4CX250B rack-mount military amp for conversion to 2m amateur service. Tuned cavity, tube, metering, power supply. Needs wiring and connection work done by competent RF engineer (all needed info is in ARRL handbook). Don't expect much. $50 plus packing and shipping. This one is probably a picker-upper, as shipping outside South Carolina will likely cost more than what you're paying for the amp! Looks OK, but I don't have the time to put into it. Will be nice when wired and operating. It's not beat all to pieces. Don't ask me any questions about it- for this price, I'm not even going to walk out to my shed to get the model number off of it. Tube is worth more than what I'm selling the amp for (RF Parts catalog-119.95). I guarantee tube to be in working condition- I just tested it in my other VHF amp. Shipping about 75+ lbs. from Myrtle Beach, SC 29577

Source record: 115445

Needs high voltage supply, otherwise appears all there. Nice homebrew amp, classic aluminum chassis with angle aluminum corner re-inforcement. 1/2 inch copper tubing plate circuit with full neutralization. Bullet-proof construction, all wires sheilded, metering compartment boxed off from rest of amp. Top-notch professional construction. $30 plus shipping and packaging from Myrtle Beach, SC 29577, about 40 pounds. No instructions available.

WARNING!!! Remove NO and SPAM from my e-mail address prior to replying or your e-mail will bounce!!!

>theirs?

It might be something as simple as the case buzzing. I had a supply that
did this once. Under no load, it was quiet. Under full load, there
seemed to be more magnetic leakage from the transformer and this caused
the nearby steel cover to vibrate and buzz. Once I removed the cover,
it was nearly silent again. I eventually found a position for the cover
where, with the mounting screws all tight, it was quiet again.

Source record: 115449

Just being able to work the Condor connection is worth the price of
a 220 radio. I have 2 220 radios, so when I travel around
California my older boy, Michael (KF6LJA), and I enjoy being in
touch. I also get a chance to say Hi to several Ham friends of mine
who also have 220 equipment.

Alinco now makes a 220 HT that sells for about $200. It may not
have all the "deluxe" features, but it sure works great.

I have a 45 watt Motorola Micor converted to a repeater and currently on 444.025rx / 449.025tx. Just resently tune and working great. Asking $100.00 dollars or trade of what you may have preferably vhf/uhf related unit. Please reply to dx_ing@hotmail.com

thanks,
de john

2583. Re: Alinco DJ-S11T or DJ-S41T, are they worth buying?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-28 00:00:00 UTC
From: Bob <bdiaz@my-dejanews.com>
Message-ID: <36DA2BF9.FEEB55BF@my-dejanews.com>
Source record: 115451

I own both the S11T and the S41T. Considering the low cost, $88 in
some places, their great little radios.

DJ-S41T: I do receive a lot of intermod with the unit; other than
that, the radio works great. I own 3 of these units. Both
my sons have their license. On the road, we operate in
simplex mode. But if there's an open repeater within
range, we use it. If we get a clear shot at the repeater,
we can be miles and miles from the repeater and still work
it. Assume flat ground, we can work in simplex mode up
to about 1/2 to 1 mile.

DJ-S11T: This unit does not seem to have the intermod problems that
the DJ-S41T has. I've never tried to see how far I could
take the radio to. However, I know that if I have a clear
shot at the repeater and it's close (within a few miles),
I can hit it without problems.

When I go on business trips, I like to take these radios along.
The small size makes them easy to pack along.

73,

Bob

The ONLY way the year 2000 could cause a problem with your radio is
if it had a real time clock in it and knew the date and time.

Assume that there was such a radio with a Y2K bug, why not lie to the
radio and set its real time clock to the year 1972 or any other year?

>please email me at KA1W@QSL.NET
> thanks and 73
>Dave

My memory may be flawed here so take this with a grain of salt...but beware your radio if it's
not capable of handling these voltages and current.

Relay---> 120V or 125V
Current may be around 200 mils.

ALC ---> negative 8 volts.

Since you don't have a manual, a couple of caveats...

NEVER tune in the ssb mode...tuning is only to be done in the CW mode.

Kenwood doesn't want you to exceed 650 mils Ip...750 Ip MAX in the CW mode. Plate current should
not exceed 400 Mils on voice peaks in the ssb mode.

Ig should NEVER exceed 200 Mils.

Also, don't use vox with your 746, the amp tends to hot switch and you'll end up replacing the
TR relay in the amp. Also, no QSK unless it has bee modified for it.

Sooo... if you baby this amp, it'll last a long time. It has a few flaws, but you will be very
happy with it as long as you operate it conservatively. I truly like mine and I once thought
about selling it, but I cleared the glue out of the shack and after a few good breaths, decided
to keep it.

I pulled the eimac tubes out and put in the RF graphite tubes. I wanted to save the eimacs. I
found a little more drive needed, but if I drive it with 45 watts or 55 watts, who cares (I usually don't push mine past 800 watts but I only ragchew) . If you need new tubes, don't heasitate to put the RF tubes in.

If you knew all of this stuff already, I apologize for the bandwidth and hope you have a great
time with the 746.

73 and good luck with the new radio

> or Watkins-Johnson on the front panel.

Hi, Gary,

Don't get me wrong -- I appreciate your response and respect your knowledge you display in r.r.a.e, but I could use specifics. I've only had one other response, endorsing the 8500. I happen to like it, too, but it's an excellent consumer grade piece of gear.

I wouldn't even know where to _look_ for W-J equipment (other than the HF1000, which isn't what I need!) or R&S. Who do I contact? Do you know dealers that will do single-unit sales? What models? Given the current regulatory environment -- H. R. 514 passed the House -- I need to move pretty quickly while such equipment is still legal in the U. S.

Thanks again,

Eric

I am sorry to hear that you have bad experiences with the IC-2100H. I have 2 of them. One in each car. They have been reliable and full quality for the 6 months I have owned them. What exactly were they doing that dissatisfied you? I am curious. All I use mine for is repeater/simplex use, and every once in a while using a autopatch. Nothing special. QSL

My Astron RS35M is starting to make a buzzing or vibrating sound when I draw more than a minimum amount of current through it..voltage remains stable, it just makes this "vibration-sound" which gets louder as I increase the load on it. I suspect the bridge rectifier maybe about shot but I wonder if anyone else has had a similiar problem with theirs?
Thanks...Mike

They did no such thing. I walked up to their table at a hamfest and exchanged Federal Reserve Notes for a small cardboard box that contained: a diskette and a 2 to 3 converter. The software is the entire new version because this is how they do it. They gave me no special or wonderful service in fact sold me yet another adapter that I did not want or need. Their copy protection is a nightmare the only thing worse is how they treat recent customers when a new version comes out.

Look at the mounting of the transformer..Astron is known for this noise.
Some guys have had to rubber mount the transformer to get rid of the
noise(of course make sure to reconnect some sort of "good" ground, but
usually just a good twist of a screw driver will take care of most of the
noise..also putting the supply on a towel will cut the vibration noise some
what.

Good Luck de Tim K0FL

Yep, I've seen plenty of info on converting Master 2's and Motorola's
into repeaters, but I've got 2 Uniden programmable 25W mobiles that
I'd like to make into a repeater(Rx: 462, Tx: 467MHz).

A few questions, please.
What's needed to be done to the mobiles?
What's needed for the radios so they don't get desensitized (quickly)
in a crowded tower site?
Can a tone-panel be used with this setup for 2 PL's, 1DPL operation?

I really appreciate any and all help you folks could give.

Actually, Consumer Reports did a comparison of Priority Mail, and
similar services offered by the Post Office, UPS, FedEx, Airborne
Express, etc. Consumer Reports found that Priority Mail by USPS was
faster on "longer" delivery situations. One of their tests involved a
Priority Mail 8.5"x11" envelope from an east coast address to a west
coast address. One of the comparisons was to USPS First Class Mail. The
Priority Mail envelope arrived in two days and the First Class envelope
arrived in five days. You still have to insure it if it has value.
For what it's worth...

Very nice set of Browning Golden Eagle MK IV's. Would rate them as a solid 8+ or 9 on a 1-10 scale.Has a very small scratch on the cover of the transmitter. This set has the 99 ch. kit that goes in 5 kc. steps.Also has tuneable transmit "slider".Just replaced the burned out lamps for the "On-The-Air" sign and the LSB lite.Comes with a Astatic Gold Eagle D104 mic that is in ex.cond. Set has just been aligned and works great! Price is $500.00 + shipping and packing. If you need more info feel free to call or email me.

Take care,
Stan (530)241-0843

2622. Re: ANYONE HAVE A WORKING VX-5R ??????

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-28 00:00:00 UTC
From: Larry Benko <benko@aztek-eng.com>
Message-ID: <36D981E6.D2747FEC@aztek-eng.com>
Source record: 115490

I too have a VX-5R, S/N 8N02--- and side by side tone squelch
comparisons with my W32A (1 HT held to each ear) show that the
VX-5R opens the squelch later than the W32A but just by a fraction
of a second, no where near the 1-3 sec. that some experience.
General scanning seems to indicate that the VX-5R does stop at
repeaters with a subaudible tone (and the VX-5R set to tone squelch).
However if it sometimes did not stop, I'm not sure that I would
know. I mainly bought the VX-5R to use for foxhunts and the
all metal case works well when close in. Also being able to tune
to the other side of the 1st IF (e.g. 146MHz + 2*47.5MHz) with
about 30 db. of signal attn. again works well. All in all, I like
the VX-5R but I too wish the tone decoding was a little faster. By
the way when I got the VX-5R I received several comments about weak
audio. However after turning up the audio pots. (for all 3 bands)
this comment has gone away. The pots. are located under the
sticky label in the battery compartment that covers the temp./
barometric pressure unit.

Source record: 115491

I like the TS-50 over the IC-706 only because of the Noise Blanker. We took a 706 to two Dayton Hamvention trips. We could not get rid of ignition noise from my van. With the TS-50 (on our 3rd trip to Dayton) we simply hit the NB and the noise was gone. The TS-50 is mine, the 706 belonged to another ham. Yes the 706 has more features and bands....

I used shields, caps, and ferrites on igniition wires/coil/cap to reduce the ignition from an S7 to an S3. The TS-50 did the rest. Fuel pump noise is next...

Dennis,

The S41 is a good radio. I have two of them and use them mainly for cross banding to a higher power crossband rig. Also, the S41 can be modified to cover the FRS frequencies. The audio is good and strong for such a small rig.

I recommend it for a good micro-power HT.

2628. Help modify FT-8100

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-28 00:00:00 UTC
From: Bob Stadtherr <bstadtherr@tcsn.net>
Message-ID: <7bc24p$t1a$1@news.ncal.verio.com>
Source record: 115496

I am trying to modify an FT8100 for a pilot friend.

I removed the resistor as instructed in the CAP/MARS mod, and reset the radio. I was able to access the desired frequencies no problem. When I download the radio from the ADMS software, the radio shows "err" on those frequencies.

Any fixes for this?

2629. Yaesu VX-5R New User Comments

Source record: 115497

Purchased a VX-5R from HRO last week and received it Friday. So far, so good. A few items right out of the chute:
1. As an earlier poster to this NG mentioned, there is no way described in the manual for deleting a memory. It can be overwritten, of course, but you can't delete it like with the Bearcats, etc., by simply writing a "zero" to it.
2. Same with editing or moving Memory Group freqs. I hope the software application will make a lot of this easier. I suppose I'll have to break down and order it.
3. The charger. I don't think you're supposed to transmit when the charger is plugged in. When I key the xmt, mine blanks the screen, then goes to scanning a memory group, even when I transmitted from the VFO positon. The book's heading on charging has "receiving only" in parenthesis, but nothing further in the following text, or anywhere else in the book, as far as I can tell. That's kind of a bummer, especially when in the car.
3a. I went ahead and purchased the AA-battery case as an option, (along with the car DC cable and the overpriced SMA-BNC adapter).
4. It's great so far. Tough to program manually (and we could use a few more Memory Groups rather than the 5 that can be programmed.
5. Nice receive audio and sensitivity. There is a bit of speaker rattle at moderate to high output -- I don't know if this is normal. I lot of it has to do with the dynamic range of the received signal.
6. Of course, HF reception is marginal, but I can receive WWV (barely) with the duckie. I plan to do some experimentation with long wire dipoles, verticals, etc. just for the hell of it.
7. I like the switchable TX power output feature. I can cruise at 2.5 or 1 watts just fine around my area.

>Thanks...Mike

That's just transformer lamination buzz. Try tightening up the transformer screws. In some cases, the top cover is being vibrated by the transformer magnetic field, a non-conductive wedge between the transformer and the top cover generally stops it. Power transformers often loosen up as they get older. The varnish on the laminations often cooks out if they've been at all hot, and lets the laminations "sing". It won't hurt anything.

Generally, the base radios are rated for longer tx times, higher
power, and made more for home use.. Most likely the mobile radio will
advise you to refrain from long conversations.

Bill,

As the saying goes, there are no stupid questions....

As for a 10 meter mobile antenna, there are plenty of options, depending on your budget. If you check out "QST" and look through the advertisements, you can check their websites and scope out available types and costs. A quick and esy solution to your situation may be to visit your local "Radio Shack" and check out the mobile antennas they sell. (Normally, "Radio Shack" is not my first choice for amateur radio items). They sell a 10 meter/CB mobile mount with a magnetic base and a length of RG-58 cable that can easily be placed on top of your van and connected to your rig by running the cable through an open window (Then roll the window up :^)) and attach to your rig. Voila! You are on the air. (Of course, you have to adjust the length of the antenna to the 10 meter frequency with an included allen wrench - it take about 1 minute) Does it work?

I just worked a station in Brazil with the same antenna and a 25W mobile rig and I routinely QSO/DX with European stations on my way to work in the morning. I think their mobile mount costs about $40-50, tops. Their are other antennas out there, and I'm sure you'll receive additional suggestions.

But always ask questions...that's the good thing about this group.

Hope to hear you on the air soon.

Not yet? Why? Surely I can call first-hand sources and report my findings without actually owning one...right?

Nope - but one is on my personal "hit list" for next purchase. Thanks to Yaesu for making my speaker/mikes and earpieces compatible between my FT-50, VX-1R, Vertex VX-10, and now the new VX-5R...THAT sure saves a lot of money on what I consider to be necessary acessories!

Also - the ADMS software can be used for all three of those amateur HTs...and RT Systems is EXTREMELY CLOSE to releasing the new version that will program the VX-5R....

2647. Heath Power Supply and misc items FS

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-28 00:00:00 UTC
From: Ken Simpson <W8EK@usa.net>
Message-ID: <S3iC2.1811$rA.4459@monger.newsread.com>
Source record: 115515

For Sale:

Heath IP-27. It is a low voltage power supply, fully adjustable from about 0.5 Volts to 50 Volts. It also has current limiting that is built in and adjustable from a couple ma up to 1.5 amps. There is also a nice large meter for measuring current or voltage. The supply is "floating", so can be used for either plus or minus supplies. It is the "Heath Brown" color. Manual included. $100 plus shipping from Florida.

Top louvered cover. Gray color. I think this is off of the SB-104 power supply, and is typically removed when the supply is put inside the speaker cabinet. My memory may be wrong. It could easily be for something else. The top of the cover is about 9 1/4 inches wide, and 8 3/8 inches deep. It is about 5 inches tall. $ 6

After getting all of the pieces of the SB-101 that I parted out a couple of months ago taken care of, I find that I have just a couple of parts left. I should add that all of these were "spoken for" originally, but the people have not followed through, so I am again offering them for sale.

Actual LMO itself. This is the tube type, and can be used in almost all of the SB / HW series that uses the tube type (includes SB-100,101, 300, 301, 400, 401, HW-100, etc.). $ 20

The black dial portion that goes on the front of the LMO, and holds the 2 lamps. This is not the actual dial part, but the black background for the 100 kHz part of the dial. It includes the bracket that attaches this mechanism to the top of the LMO. $ 5

The lever arm in the dial mechanism, that goes behind the circular dial, and has a lever arm that moves the 100 kHz portion of the dial across its scale. Includes the little nylon thing that goes in the groove of the circular dial. $ 6

Prices do not include shipping from Florida.

E-mail to W8EK@usa.net

Thanks.

73,

Ken, W8EK

Hello,
I've been studying for my Technician license for 2 weeks or so and I'm confident that I can pass it. What I'm thinking about now is a first radio. I need advice as to what radio would let me take advantage of all bands and frequencies allowed Techs. I'm looking for something that will give access to all modes on 6m, 2m, and 70cm. What are your recommendations? What about price? How much would a radio like this cost? I will probably be working from home, so portability isn't much of an issue. If you recommend a base or mobile, what kind of antenna would you recommend? Any advice would be greatly appreciated.

Thank you,
Brandon Nedwek

2656. Re: Query: Experience with Kenwood TS50s

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-28 00:00:00 UTC
From: kb6luc@aol.com
Message-ID: <19990227193312.13175.00001071@ng-cr1.aol.com>
Source record: 115550

Over the last few years I have been pondering letting go of my TS-50 and getting an IC-706. I am mainly attracted by the 6 meter all-mode section of the 706. But every time I hear both radios on the air, I stop thinking about it. Just listen to both on SSB. The IC-706 has high-pitched, thin, constricted, weak transmit audio. Other than that it is a fine radio with many desirable features. When I switch back and forth between my TS-50 and my TS-850, listeners can not tell the difference between the two. The TS-50 delivers a good clean mobile signal that packs some punch.

2665. Icom 32at audio

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-28 00:00:00 UTC
From: scherbe6@airmail.net
Message-ID: <63752C89FA7B8A5F.2E5ECBEAAC9ABA07.AB0E61841FE1C41A@library-proxy.airnews.net>
Source record: 115559

I have a 32at that has developed a low audio signal. I have the schematic, but do not see any audio gain control. Is there anyone who knows this radio and is there a control there someplace?

It is a rather old dual band talkie...

Thanks, Ted

2666. VX-5R and 800 Meg RX

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-28 00:00:00 UTC
From: smc@Blaze.wrdsb.edu.on.ca
Message-ID: <7bae84$j7f$1@nnrp1.dejanews.com>
Source record: 115560

Hi Folks,

I picked up a new VX-5R today. I am very impressed, but with one exception. Yaesu seems to think that 863.9875-868.9875 is cellular. In my area, our local public safety agencies use radio systems in this range. I thought I would just use the image frequencies, and whammo- they are blocked out too.

Does anyone else have a VX-5 that doesn't include this range? Are there any modifications that will open up this range? I don't care about cellular, just 866-869.

Cheers
Scott

2667. Problems with new Kenwood 2M Mobile mikes??

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-28 00:00:00 UTC
From: ny4t@home.com
Message-ID: <36dbb1b5.1454511@news.nash1.tn.home.com>
Source record: 115561

I was wondering if anyone was having problems with the large backlit mikes now featured on Kenwood 2M and dual-band mobiles, particularly the TM-261A. I have heard of about a dozen cases around here but Kenwood doesn't admit there is a problem. The mikes have a tendency to intermittently unkey or not key up at all. Please post here if you are having the same problem. Several of these folks locally are highly steamed at Kenwood and wanted me to put out this query on the NG. BTW, I have a late '80's vintage TM221A and it works just fine. Think I'll keep it.

73,
Lee Hall

I'm looking for opinions on the DJ-S11t. I'm looking to pick up a small 2M ht for downtown chicago use. 300mW of output should be fine since i'll be close to all the repeaters I'll want to hit. Here are some questions I have and if anyone has anything else to add please send me an email.

Is this a good radio for the money?

How does it sound both in and out?

Any intermod problems?

How is the battery life? How much Talk-Time? (I assume it's good with out 300mW of output.)

2674. mobile vs base radio?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-28 00:00:00 UTC
From: KD5GEH <kd5geh@arrl.net>
Message-ID: <7bb1g1pva1@newnews.startext.net>
Source record: 115568
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

What's the difference? Why would I buy a 'base station' radio if it costs much more than the mobile 'version'?
As-in... Two radios from the same company with the same features (to my 'tech' eyes) usually have a much different price-tag. It'd seem that the mobile, being much smaller, would cost more to build, but... usually costs less than the comparable base-radio...

Thanks.

Do not worry, you are not the only one having troubles wiht the 2100. I have 2 of them. I personally like the units and have only had one problem with the 2. It was the pl scan could not lock on the pl. It took 3-4 cycles to finally lock on the correct pl tone. To remidy this problem, I take my HT and when I start the pl scan on teh 2100, I key up my HT that has the pl already and that locks the correct tone on the 2100. What a pain!!! Especally since most machines around me have a pl.

I am have been looking at 920s over the past six months ... Why are you
selling this one ... And yes I am interested ... Have they made any changes
to the 920s since they time you purchased this one ???

Hi

I'm looking for a manual (or just a schematic) for the Heathkit IP-12
power supply.

Thanks
Reed

I just bought both of them and I think they are a good deal for the money.
I live in a large city, so I get a little intermod at times, I usually fold
down
the antennas and this usually fixes it. If you live in a area with not as much
RF, you
shouldn't experience any problems, They are perfect for Hamfests,
Swapmeets, car to car etc. and they seem to really good on batteries.
Just my opinion....

I'm looking to purchase a multi-band mobile radio for a trip I'm making this Summer and someone had a pretty good price on a Kenwood TS0120s. Does anyone know where I can get more info on this rig, a picture perhaps? The guy wants $275 + Shipping, is that a good price?

Opinions are welcome...

From: Shanon Lee Herron KA8SPW <sherron@takeout.visteon.com>
Message-ID: <36DAE5DD.64D866F9@takeout.visteon.com>
Source record: 115335

My PTT switch quit working too, you could hear it click but no Xmit. I found a bad solder connection in the common ground circuit on the board in the mic. Try and resolder yours. I used the print in the service manual to figure which lead to trace. I resoldered most of the connections to be safe. I have also replaced the modular connector twice. I think the next time I am going to just cut it off and put on one of the old reliable 8 pin round connectors. I use mine remote mounted in my van. The modular plug is nice and small but the tab was not ment to be used twice a day. 73 Shanon KA8SPW

Source record: 115336

For Sale:
Brand new in the box Icom IC-706MKII HF/VHF Transceiver (with DSP)
(powered up for 20 minutes to test and that's it)
comes with AH-4 automatic antenna tuner (never opened box)
and 500Hz CW Filter (uninstalled and in original box)
Must sell due to financial hardship.

Price: $1275 + shipping

If interested, please email: k4msw@qsl.net

Thanks and 73,

Todd, K4MSW

2693. ***For Sale*** Icom IC-T8A Tri-band HT. $280

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-01 00:00:00 UTC
From: John Alley <chia@korrnet.org>
Message-ID: <Pine.GSO.3.95.990301152816.25432A-100000@georgia.korrnet.org>
Source record: 115337

I have a brand new (only 10 days old) Icom IC-T8A that I would
like to sale for $280 shipped to CONUS. This is a GREAT Tri-band HT that
covers 6 meters, 2 meters, and 70cms. I have the HT the box all paperwork,
and the manual, and the BP-197 AA alkaline battery case. This HT is as new
there have been NO MODS done to it! The features are as follows:

RX: 50-75.995MHz
76-107.95MHz wide FM GREAT broadcast recieve
108-135.95MHz AM Aircraft Band
136-229.95MHz
300-399.99MHz
400-599.99MHz
600-999.99MHz (with NORMAL Cell blocked freqs. NOT part of public
service 800MHz band like the VX-5R!)

TX: 50-54.000MHz
140-150.00MHz
430-450.00MHz

This is a GREAT HT! I really love the HT, but here in my area the
6 meter coverage is pretty low, unless you have a great 6 meter base antenna.
And here my wife and I live in an apartment so there is no chance for an
external antenna until we get a house. I kinda need some cash right now also.
This HT is great, I am asking $280 for it shipped via. UPS ground, or USPS
standard to the CONUS. Please if anyone is interested let me know. I'll even
ship overseas if you can make up a little in the shipping. Thanks and E-Mail
me at one of the below addresses for info, or with questions or if you want
the HT. Thanks....

I have the 969 and love it. One thing though, MFJ isn't know for their quality control as far as cold solder joints go, mine had one and a dirty roller inductor. Took it to my local ham shop (Ham Central - Thanks Eric!) and in 5 minutes good as new. Works great. MFJ makes good stuff but they need to be more careful with quality control and testing. If they tested mine they would have seen a problem right away.

2702. Re: Questions about MFJ Tuners

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-01 00:00:00 UTC
From: "Tom C. Brown, Jr." <mmc@netdoor.com>
Message-ID: <oLEC2.1956$gU1.8523@axe.netdoor.com>
Source record: 115346

Kinda like my MFJ 971 QRP tuner: DOA and when I opened the cabinet, the problem was obvious.....one of the wires was pressing quite firmly against the aluminum top cover! Bent it down a bit and it's worked fine ever since.

Or like my old 411 code generator: DOA with a defective power switch. Cross wired it to the other [unused] terminals on the switch and it worked until the headphone jack failed. Snaked a dental tool up into the headphone jack and fixed that and it worked until I retired it in favor of the 418, which is far far better built.

Or like my first 407C keyer. Quit very quickly after I first used it and I found out that there was a pad on the main PC board that had never seen solder! Soldered it and it's still working.

Or like my other 407C keyer. Quit very quickly after first use, and I found that the xtal was bad. Got one out of an old modem and replaced it and it still works.

Or like my MFJ 422B keyer. The battery clip fell out as soon as I put the first battery in it, and I had to re-mount it. And later it developed an added "feature" of making continuous dashes whenever it felt like it should..... Probably a bad joint but I've not had the time nor inclination to put any more time on it as of yet.....

You get the idea.

They really do fill a niche in the ham equipment market: very useful stuff that is very affordable. The only caveat is that you will have to fix a lot of it at some time during its life. Sometimes *VERY* early in its life! ;-) Which is not necessarily a bad trade when the price is cheap enough.

Interestingly enough, the quality of construction level seems to vary widely.....it's not universally low. I have a 493 keyer that has worked perfectly ever since I got it, and my 418 code generator has performed flawlessly for over a year. That's one I'd recommend to any CW op....

Concerning their tuners, though: pay no attention to the built-in RF wattmeter when operating SSB. I have measured 50+ percent error [low] which would have you running SERIOUS power if you were using a behemoth amp and using the PEP indication on the wattmeter as your guide! :-) The "Peak" function is OK for watching your power while running CW, but the crest factor of SSB is too great and the meter just can't make it.

But, the long and short of it is that you can't go anywhere and buy anything better for the same money.....

From: paul wise <n3ngo@prodigy.net>
Message-ID: <7bf5je$75cm$1@newssvr03-int.news.prodigy.com>
Source record: 115348

good point dave, i too agree that y2k will pass without major inconvenience.
i believe the bottom line is that alot of people are making alot of money
pushing y2k products and services.
business firms are paying hundreds of thousands of dollars to 'consultants',
basically someone who will validate your hardware and software for y2k
compliance.
i work for one of these businesses. my company paid a consulting firm over
$200 per-item just to take an inventory of what hardware we had that might
be affected. then my job became testing of all these systems, even though
they have no date or time capabilities
of course the 'consultants' included every meter and gauge to increase thier
cost.
then there are merchants pushing things like generators, flashlights, what
have you for when the lights go out (in case the power comany experiences
rollover problems)
have you priced or tried to buy a generator lately? most suppliers are
backordered for months...
the champaign industry is even trying to capatalize on this by stating that
there is no way they could produce enough to supply the demand for millenium
parties.
but they have had no problem supplying enough for any other new years
celebration?
i am suprised doctors are not cashing in by telling heart patients that
pacemakers installed before 1994 will not work in a 2000 environment, can
you imagine the implications if something like that broke?
i think alot of people are making as much as they can now, because they are
going to have to find some other way to make money in 9 more months...

Source record: 115349

Hi Paul:

I owned a TS-120 some time ago. $275 doesn't sound too bad if the rig is in good condition. I've seen some at hamfests that were pretty beat.

The rig is big for a mobile by today's standards. It only covers 10 to 80 meters and does not cover WARC bands.

I guess it depends on what you want to do with it. If it covers the bands you want to work, then it will do a good job for you.

2706. Trio-Kenwood 820 Transceiver and remote VFO 820

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-01 00:00:00 UTC
From: Darwin <downwind_sailor@yahoo.com>
Message-ID: <36DB1B05.759B248F@yahoo.com>
Source record: 115350

I just put them up on e-bay - http:..www.ebay.com

TS-820 Tanseiver. Note that this is the TRIO-Kenwood TS820 and is the same as the
Kenwood TS820. It is absolutely identical except that it has a TRIO label (even the
Kenwood leaf logo is the same). The case is in excellent condition and so is the
electronics. The power supply is built in. Works on 10/15/20/40/80/160 meters, 160
watts dc CW, 100 watts dc FSK, 200 Watts pep SSB.
Has Magicon RF processor module installed to convert RF compressor to RF clipper.
Has switch modification to allow using SSB 2400hz filter in parallel with 500hz CW filter.
Service update #13 completed to remove 'rubbery' feel to RIT tuning.

Remote VFO-820. Note that this is the TRIO-Kenwood VFO and is the same as the
Kenwood VFO. It is absolutely identical except that it has a TRIO label (even the
Kenwood leaf logo is the same). The VFO allows split operation of the transmit and
receive frequencies (good for DX work.)

Microphone is the Kenwood MC-50 desk mike but an Astatic UGB microphone and stand
are also included.

Original (Japanese) manuals for both units. Original Kenwood TS820 Manual and extra
photocopy. Potocopy of Kenwood VFO820 manual. Also includes the oringinal Kenwood
MC-50 manual and assorted other publications. The transiever has it's original shipping
carten.

Please buy them from me, I'm going cruising (8 years by sailboat) in about 6months and I
bought an Icom 735 for onboard use. These guys have got to go.
Thanx

Message-ID: <36DB5EEC.6DE2@spindle.net>
Source record: 115366

I Aquired a TH77a from a friend that had purchased it second hand and not working properly. It seems someone in the past has done a modification on it but has lost the capacitor and its jumper wire that is glued to the board near the chip diodes that are removed during the mod. The capacitor is labeled C-124. Has anyone performed this particular mod and happen to remember the value of C-124? Also a schematic would be very helpful as they severely butchered the board in that area and it is hard to tell exactly which points the capacitor leads solder to.

Thanks in advance.

Most folks just don't know how to properly package an item to
survive the rigors of UPS. I have shipped hundreds of electronic
related items and have just had one lost shipment. None lost to
damage. I have bought items from individuals that assured me they
would pack it well and when it arrived it was trashed! Used properly,
UPS is the cheapest and most reliable shipping source we have.
However, Fedex is better than UPS if cost is of no concern. Thanks
for letting me get my 2 cents in! ...Joe

Source record: 115369

Greetings:
Is anyone familiar as to the possiblity of adding tones to my old Kenwood TM201B? Has anyone tried to add sub-audible tones, or is there anyone on the newsgroup that knows a technician that has accomplished this.
I was told that it is not possible to do, but I have noticed add-ons in QST and some other magazines that assure the addition to tones to any rig. I would really like to make full use of the 2 meter band and the repeaters in my area with this old rig.
Any help would be appreciated. Please send information to KD7KR@arrl.net
Thanks, 73
Mike

From: cslc82@email.mot.com
Message-ID: <36d9df13.253985712@netnews.worldnet.att.net>
Source record: 115382

Before you spend a lot of money on a DSP, or even the companion Drake external speaker, I would urge you try to locate a big, old Public Address speaker (like the ones that were in school classrooms in a big brown box), maybe 8"-10" speaker. Sometimes these can be found at Salvation Army, Goodwill Industries, and other thrift shops as well as hamfests. Similarly, these same places often have "junk" stereo systems which have decent speakers for the application you're describing. Even if you buy a $25 stereo and throw out all but one speaker, you're doing well.

I say this from experience, as the speaker makes so much difference in the sound! The Drake can drive a 4 or 8 ohm speaker to decent levels and you'll be amazed how good it sounds. In my case I got a pair of cheap Radio Shhck bookshelf speakers and rescued a small stereo amp (about 10 watts) from my junk room. My transceiver output feeds the left channel and my Drake R8A feeds the right channel. Both rigs sound fantastic, with the Drake having the best audio by far.

DSP and audio filters can be helpful with bad interference, but they both take away from the audio, they don't add to it.

Good luck!

73

It is a Yaesu product, first manufactured as the FT200 in 1969 and
sold mostly overseas. I bought mine directly from the Yaesu factory
while in the service in Japan. A year later, Henry Radio imported them
as the Tempo One, and Yaesu moved manufacturing to China or somewhere.

>ASTRO option a whole different radio or an optional module?

I believe the Astro has a greater split capability, digital & analog
Tx/Rx ability, and maybe a few more bells and whistles than the
regular Saber. I think the main difference between the regular
Sabers(1/2/3) are the keypad/DTMF and certain functions obtainable
through the keypads. If you can afford the Astro, get it. It's a
great radio, but I think the Motorola MT2000 is a better deal.

Hi, All!
I have two National NC-173 receivers for sale. Really
hate to get rid of these, but finances force sale.
First receiver is in very nice shape, works fine, with just a few
minor scratches. Has original speaker and mint owners manual.
Second receiver is complete but does not receive. Very minor
damage to lower front panel. Will fix up nicely.
Will sell all for $250 plus shipping. Will not seperate.

2742. ICOM 2100H minor problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-01 00:00:00 UTC
From: Joe Mehaffey <joe@mehaffey.com>
Message-ID: <36DA1B7A.F3B8816A@mehaffey.com>
Source record: 115397
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

Last year, I got rid of all the family's older 2M radios and installed three IC-2100H units in the vehicles and one additional unit in the house. The House unit runs on 13.6volt DC battery power float charged continuously. These units have been VERY satisfactory once I solved the following problem.

The problem that I have seen on ALL FOUR radios is as follows:
1) If the TONE SQUELCH is set to anything but the default of 100 hz,
AND
2) You set the frequency to <say> 186.2 hz tone squelch
AND
3) You LEAVE THE OPTIONS MENU SITTING ON EITHER THE 186HZ RX OR 186HZ TX set frequency (as opposed to say the .600mhz offset or the dimmer setting or the color setting) when you push the MEMORY WRITE button,
THEN
3) Within a day or two you will notice that your radio does not work and when you LOOK AT THE TONE SQUELCH FREQUENCIES, you find they are BOTH (tx and rx) at the default 100hz setting instead of 186.2 where they should be.

This has routinely happened on all four radios, EVEN the one connected to the unterruptable battery power source.

Icom says they never heard of this problem.

The workaround is to be sure to have your OPTIONS MENU sitting on <say> the color selection option when you push the MEMORY WRITE key. When I do this, I have never had the tone squelch settings change.

Does anybody have a fix for this problem? I am SURE if all four of my IC-2100H radios have this problem, I am not the only one having the problem despite Icom's story.

Thanks
Joe Mehaffey

yaesu ft100 $???, yaesu ft847 $1700, icom706mkIIG $1200?. expensive rigs with all those bands, but available. you might want to start out with a single band rig for now and get other bands going later, after you get your feet wet. go to a hamfest or two.

any old antenna will do for six meters and will get you all the e skip you want this spring. if you want tropo on 6, youll need much more $$ and a big antenna and tower(also applies to tropo on 2m and 70cm). use good coax no matter what(anything above mini8). if you only want fm thru repeaters, and you live close to town, again, any old vertial antenna will work for that. get a ringo ranger or beam if youre in the sticks. hope this helps and good luck with the test!

2747. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-01 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7bdc0l$kus@news.Hawaii.Edu>
Source record: 115402
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman, WH6U
(rec.radio.amateur working-group)

I asked the same thing a few mnths back. I finally wound up with 4 seperate radios. One advantage's you can usually find used single-band radios CHEAP.. Another's that if something goes wrong with one, you're not "up a creek without a radio".. And yet another's my favorite.. I just like having lotsa 'junk'.....
As for antennas (you didn't ask, but)... I got the el-cheapo Cushcraft AR270 2m/440 for about $65 (the other 2 were used).. You can pay much more for one, but it sure works for me. I can usually 'hit' one repeater 200miles away and a few others 80-100 miles off, and there seems to be atleast several hundred (I know there's not actually that many) right here in the dfw area that I can 'get to' with only 5watts on the HT.
Hmm...

Message-ID: <36DA549F.235F@parg.org>
Source record: 115409
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

What is a "Base Station"? Some people insist if it doesn't have a built in power supply then it's a mobile. So to them I say 10-4 Good Buddy. If you don't have to impress anyone with the size of your "RIG", get the cheaper (smaller) one. The bigger radios have more room for knobs and buttons so you can access controll functions manually without having to go into a menu system to make the radio do what you want. The newer and bigger the radio, the more menu options it is likely to have. IMHO.

Message-ID: <01be63e2$f55b1b60$148592d0@Bit-Net.bit-net.com>
Source record: 115412

I have been telling folks for over a year that Y2K will be
a mere blip on the screen compared to the field day
hacker-terrorists will have in 2000.

Hackers are terrorists and terrorists thrive on fear and
the perception of calamity. With all of the profit and
politicallly-opportunistic fear-hype surrounding Y2K these
purveyors of fear have created the perfect environment
for the hacker-terrorists.

This story (below) only begins to illustrate what is in store.

Sure wish someone would confront the Y2K fearmongers
with the consequences of their selfish actions and begin
the process of taking away from the hacker-terrorists this
field-of-fear that has been manufactured.

Anyone seen other hushed-up stories like this?

Hackers Seize UK Military Satellite - Report

February 28, 1999 6:42am
Reuters

LONDON (Reuters) - Hackers have seized control of one of Britain's military
communication satellites and issued blackmail threats, The Sunday Business
newspaper reported.

The paper, quoting security sources, said the intruders altered the course
of one of Britain's four satellites which are used by defense planners and
military forces around the world.

The sources said the satellite's course was changed just over two weeks
ago. The hackers then issued a blackmail threat, demanding money to stop
interfering with the satellite.

``This is a nightmare scenario,'' said one intelligence source. Military
strategists said that if Britain were to come under nuclear attack, an
aggressor would first interfere with military communications systems.

``This is not just a case of computer nerds mucking about. This is very,
very serious and the blackmail threat has made it even more serious,'' one
security source said.

Police said they would not comment as the investigation was at too sensitive a stage. The Ministry of Defense made no comment.

I have done many that were in the 450-470 range to the 440 Ham but not sure about yours. That might be too much of a stretch for the 403-418. It involves a Rx preselector which would go there with about a 3-6 DB loss of sensitivity and the TX side has a Driver and PA module tuned for that band, it many not make it that far. Hope this helps.

Does anyone have any experience with the software mods for the FT50? I've seen Goran Vlaski's page (http://www2.crosswinds.net/frankfurt/~vlaski/) and was wondering if this really works (I'm not so hot with the soldering iron).

Thanks

2769. Wanted: Opinion on dual band mobile..

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-02 00:00:00 UTC
From: seebody@toreply.com
Message-ID: <36dc4031.20358679@news.ncal.verio.com>
Source record: 115224

I'm looking for a dual band mobile radio, basic requirements are remote mount, alpha tags, and preferably wide band RX (UHF would be nice to get to 488, VHF 160 is about as high, with AM air reception). Anyone have any mods for the Kenwood V7A to open it up to 488? The Yaesu 8100 looks nice, but lacks Alpha. I do news photography on the side, and our fire departments are on 488, so would like to listen to both.. Please reply here and to eplatt at wco dot com please.

Thanks.
To reply via e-mail, please use eplatt at wco period com. Sorry, but this is the only way to despam my address.

2770. FT-Manager CAT for Yaesu

Hello

I am pleased to announce the last version of FT-Manager.
FT-manager is a program under Windows 95/98/NT which allows the
control of practically all the transceivers Yaesu even oldest.

Last version 1.9.5 includes new functions especially relative to
the Logbook (QSLs printing, DXCC award...)

To see on http://ourworld.compuserve.com/homepages/f6dex/FTMane.htm

Since you apparently do not have the computer skills to determine this for yourself I'll help you. Every time you defrag the disk you have to reinstall the software. You cannot easily make a backup copy of the floppy disk. If you backup and restore your hard disk you have to reinstall ADMS. This is abusive copy protection. I got so fed up with it I hacked the copy protection in self defense. But naturally since Clint is satisfied all this crap is just fine. Give it break Clint I'll send you a buck buy a clue.

Operates alone or with your laptop. Great for hamfests or field days on the spot testing of electronics circuits. View waveforms or voltages readout on backlit 16x32-pixel LCD or trough your computer screen. Includes Windows/Windows 95/
MS DOS compatible software with complete on-screen help.Use your computer system to record and print waveforms. Made in Europe model.
First $60 takes it shipped to your door with the manual box and included PC software. e mail at CVelasco@aol.com

2777. Commercial HF AMP for sale

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-02 00:00:00 UTC
From: Chris <ck5@ix.netcom.com>
Message-ID: <36DC5506.6A4E@ix.netcom.com>
Source record: 115232
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap.rec.amateur.radio.homebrew

I have a beautifully built Sailor HF AMP. This one has two RCA 8122
ceramics tetrodes which checked out full output. 1.8MHz to 30MHz
All the tuning is done with servos and the band settings are set with
brass slugs. Built under high standards, rackmount, very high quality
components including a large cooling fan. It was removed and fully
functional from a cruise ship that went to solid state. This amp puts
out about 800watts with very little input. It has a built on solid
state pre-driver stage which can be bypassed if need to. It's complete
and in excellent condition. It requires a power supply and controls or
the servos. No manual but can be found at marine electronics shops.
Sailor is still the leader in Marine and satelitte communication
networks. I will send jpgs by request to anyone interested. I want
$400+shipping for it. The tubes alone cost that! Roughly 45 lbs

Source record: 115249

If the SWR is higher at the top of the band than it is at the bottom,
turn both rings 1/4 to 1/2 turn counter-clockwise to raise them.
To lock the rings, turn the upper ring clockwise and the lower ring
counter-clockwise so they rest tightly against each other.

Tuning to exact freqs. requires cutting off pieces of the top section;
there is a length table with the instructions. BTW, it is tuned (out
of the box) for 11 meters. You could use a tuner for 10 meters if
you don't want to cut sections off; I'm using an MFJ 941E tuner and
I'm getting excellent DX results.

Hi,

I have a Kenwood TH78 European version and I want to use it in the american amateur radio bands.

Is is possible to configure it to work in those bands as the TH78A?

Thanks in advance,

Pierre.

I have a quantity of RF and other parts in excess of my personal needs.
Some items are available in large (>50) quantities.

Here's what I have and asking price:

ITEM PRICE
(each)

Johanson 8054 1.5 to 20 pf Capacitors $1.50
(Piston Style)

Piston Style 0.7 to 15 pf Capacitors $1.25

0.01 ufd Monolithic Ceramic Capacitors (Bag of 50) $2.50/bag

MCL TFM-150 Mixers $5.50
(LO/RF: 10-2000MHz, IF: DC-1000MHz, +10dBm LO)

MCL LPS-109 Power Dividers $2.50
(2 way, 0 degree, 10-500MHz)

MCL MAT-3 3dB Attenuators $1.25
(DC-1500MHz)

MCL MAT-9 9dB Attenuators $1.25
(DC-1500MHz)

AVANTEK VTO-8090 0.9 to 1.6 GHz Voltage $10.00
Controlled Oscillator, 50 ohm, +13dBm output,
TO-8 Case, with mounting hardware.

Cablewave Systems FXA 12-50 NM N Male $15.00
Coax Connector for 1/2" Hard Line
New, In the box!

2N918 Transistor $0.35

2N4924 Transistor $0.20

MRF5174 Transistor $0.50

USD935 Diode $0.15

Push Button Switch $0.15

Pictures and specifications (where available) on the above items may be
found on my web page at:

http://www.qsl.net/wb9anq/ or http://members.tripod.com/~wb9anq/

All parts are unused. Shipping is extra (typically $3.20)

Hi, i just bought a vx-5r and i d like to know what do i need to use it to communicate by modem with someone? (cheap hardware...could i use a sound modem in linux? if so how does it key the PTT on and off? a special cable?)

also how do i communicate with satellite at 5Watts? is there a special antenna for that?

Any suggestion for having more fun with this radio is appreciated thanks :)

Thanks, Plum. Appreciate your comments, and happy it brought back good memories for you too. It really had nothing to do with eBay as I have no interest in the SALE of any of those items. (I'm bidding, but they are probably too pricey for me, and this post will only raise the price. I maybe should have left the links out as some invariably took it wrong, but they seemed quite relevant.

The only Heathkit I built that didn't work the first time was the fairly complex and tightly wired first SSB mobile transmitter (HX-20 ???). Turns out I had touched and burned into a small electrolytic audio coupling capacitor, and the damage was hidden from view. Took lots of troubleshooting, logic and hunting to find it. But then it worked so well, with a Hammurland HQ-110C for receiving. Great sport!

73 Dave W6OVP

P.S. I hate to see those high prices and the frenzy on eBay, but it sure is cleaning out the basements and garages!

Absolutely, the problem is packing. Look at some heavy equipment shipped by Hewlett-Packard or Tektronix. They use foam corner supports, triple cardboard boxes where necessary, front panel protectors,etc. I get the impression that most people (hams particularly) have NEVER seen anything heavy and delicate packed properly for shipping. Remember that the typical boat anchor is a lot denser and heavier than anything manufactured today, and packing for smaller and/or lighter stuff is entirely different. nevermind the newspaper stuffing atrocities. Most packing efforts I have seen are appropriate for anvils, and not much else.

You can't (easily) find unbuilt SB102s and the like, but what you can do
is look through old ARRL Handbooks for fun projects that can be built
using parts from places like http://www.tubesandmore.com. The old
Handbooks are a dime a dozen on EBay and elsewhere, and surprisingly a
lot of the older parts are still available without much scrounging at
all.

ok and how much does this cost? (not the WinCE but the modem ;) i still
need to make my home made cable work for the vx-5 to PC interface...so i
think i wont be able to build this... :)

> Well... for Mir a simple ground plane antenna is all the is needed. It's
> quite easy to work with a ground plane, I do it mobile from a patrol car
> with a mag mount antenna and at home with a homebrew J-pole.

ok my english vocabulary surrounding ham radio isnt very good...what is a
ground plane antenna? how does it look like?

> You can work AO-27 with the rig with just a simple whip antenna. I use my
> FT50 and a MFJ-1715S to work the bird almost daily. The Arrow antenna will
> work much better, but it costs a bit more than the whip. The price of the
> Arrow is not very expensive and you'll have an excellent antenna!

same here (:) what is an arrow antenna? the whip antenna is a metal antena
like on most car? :) (ill have to learn my ham-vocabulary soon =)

i wont do packet on the road but i ll probably try to do sats
though...(while walking i dont have a car :)

this is pretty new stuff to me, at what altitude are those sats? can you
be multiple people on 1 sat using ctcss tones?(or dcs) and are there
packet sats? how does it work? hehe :) (i m too much curious :)

also, if i try to build an atenna myself how do i calculate its impedance?
(is that the right word in english ?:/)

thanks a lot!

Great story, Dave. Bet there are lots of other "stories" reading this and wondering whether to tell. We hope so.

Here's another Heathkit Memory:

It is the summer of 1953. After a year in college and exposure to other electronics types, mostly "hi-fi" and "stereo" freaks, I had to try and build something from a kit. Decided on a Heathkit VTVM, because, well, you have to be able to measure things, don't you?

It was a hard-earned $24.95 (??? Help me, I don't have the old catalogs here) that went to Benton Harbor, but it was my summer fun project after sweating hard on Iowa farms at $5/day to make next years tuition. The VTVM was such fun to build, those cool evenings in the damp basement, using the big new 250 watt 2-speed Weller soldering gun (another $10 or so) and the big soldering iron. (Still have 'em).

Dad thought I was nuts. He asked dumb questions like "what are you going to measure"? Well, um, how about the voltage at the wall outlet? It got a lot of measuring that summer. "Do you really need one of those?" Of course I needed one of those. "Well, then, why don't you use this acid core solder? We have lots of it."

I built lots of Popular Mechanics electronics projects in the late '40s and early '50s, but never met a ham. The local TV mechanic gouged this 12 year old $3.50 for a 20/20/150v electrolytic capacitor when that was a full days laborers pay, and he could easily have clipped one out of an old TV set and given it away. I finally met hams in college, and that Heathkit VTVM became the first piece of test gear at WN0ZSR. I still have it, and it works just fine.

Dad later became the very active W0LTB/W0KD, and built his own Heathkits. (1899-1986. RIP). So did a Son who built Heathkits, and a Daughter, and that VTVM played an important role.

2818. ALINCO web page price warning!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-02 00:00:00 UTC
From: rsdeputy@aol.com
Message-ID: <19990301205817.18429.00000845@ng17.aol.com>
Source record: 115276

I thought I better post this as a service to any others who might be using ALINCO's web page to purchase manuals and accessories for their radios. About a week ago, I purchased from their web page (http://www.alinco.com/usa.html) a owners manual for the DR-110 and a service manual for the DR-130. The web page showed (and as of this writing still shows) the DR-110 manual to be $5.95 and the DR-130 service manual to be $14.95. When my manuals arrived today, I was charged $7.95 for the DR-110 manual and $19.95 for the DR-130 manual. This is a 33.4% markup over what the web page shows. So, I called them and disputed the overcharge. The first two people I talked to told me that they had a price increase and the web page was out of date and that the price I was charged was the "correct" price. I told them it was not good business to jack up the price without telling me they were doing it. And I pointed out that the order confirmation email I got from them also had the old prices on it! When I finally got passed to a third person, I was told they will credit me for the difference. Too bad they won't pay me for the long distance phone call I made to correct their mistake!

So, in closing, if you are planning to order anything from ALINCO's web page, you better call them for current pricing before you press the send button. You just might end up getting charged 33% more than you thought!

It would be really cool, for nostalgia purposes, if I could find an unbuilt SB102 and build it. Does anyone still have and sell things like this?

And that's just my opinion, I could be wrong. :)

- Melissa <http://www.dimensional.com/~melissa/>

By the way, if anyone's interested in a brand new
Windows 98 upgrade CDROM, in a sealed sleeve with
key, I have an extra and can sell it for $70.
I'll even pay postage. Email me.

Basic personal or small business web page design:

Hello,

I have a HM-103 hand mic for sale. It is the one that came with my ICOM 706MKII. I am purchasing a different mic with DTMF for my 706MKII and will no longer need this mic.

The HM-103 is clean, near new... works great, haven't experienced the low audio characteristic that some complain about... Great simple mic...

$40.00 I'll ship

Get rid of your predjudices (however that's spelled)....
Anyway.. I use ham-radio (well, not much yet.. mostly just 2meters/440) and
I use computers, but I build & program computers as a hobby.. I'm about
ready to build an interface (A dumb tnc, I guess) and write a terminal prog
for the ham-radio, but I don't plan on ever 'tinkering' with the radio, so
am I still an 'appliance-operator'?....

Jeffrey Herman <jeffreyh@Hawaii.Edu> wrote in message >

I have the 41T that I bought about a year ago, last year prior to Dayton.....

I think it is a great rig for it's size and cost. At the "valley of intermod",
the
Dayton flea market last year I had no problem with intermod. Never missed
a call and never needed to change the battery.

Hard to beat for $88!

73,
Bob

Hello, I sold a gentleman a TURNER MODEL 80 crystal mike, and the element did not arrive intact. I want to find another element for this gentleman , i've already reduced the charge for it, but want to help get him another. This is a shame, because the mike was so clean when it left. If you can help w/ the hardware or any suggestions, please let me know.
Thank you,
Joe Pratt, Tubecntral@aol.com

Sure... you can find 'em on eBay, at swap meets, in magazine ads,
and so forth. But be prepared to spend ALL of your life's saving
on them! Unbuilt Heathkits make Collins gear seem cheap.

2852. Icom IC-201 questions

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-02 00:00:00 UTC
From: "Caitlyn M. Martin" <cait.martin@ibm.net>
Message-ID: <36DC08E6.6143B880@ibm.net>
Source record: 115310

Hi, everyone,

As some of you may have gathered from my requests for a manual, I recently acquired an old (as in maybe 25 years old) Icom IC-201 2 meter (144-146 mhz) all mode base rig. I purchased it from a ham in Kansas, and it has a serial number of 0023. Yes, 23! It's also in absolutely beautiful condition, and got me a very nice report in a local SSB QSO. I'm tickled to have it, but I do have questions.

First, though I was able to buy a copy of the schematic, I have been unable to find a manual for it. My experience with Icom in the past is that they are no help whatsoever with really old rigs. If anyone has either an owners or service manual, I would gladly pay to have it copied and mailed to me.

If not, maybe some other present or former IC-201 owners can answer some questions for me. First, the FM duplex function is not working, and I understand that required an add on crystal and/or mod. Can someone fill me in on the details, since we do have repeaters in the 145 mhz band segment here, and it would be nice to add that capability.

The rig has four crystal slots for fixed frequency operation. Is the formula for the crystals the same as Icom's FM rigs of the period, the "Series 20" crystals used in everything from the IC-20 and IC-21 forward?
If not, does anyone know the specs for the crystals?

I would be interested in any other information y'all might be able to share.

Thanks and 73,
Caity

I couldn't afford much then either. Mostly lots of catalog looking. Had them memorized. But I did get to built several inexpensive transmitters for myself, and some stereo gear, then LOTS of lab equipment for schools. It was all lots of fun.

I agree with this. Packed properly, all shipments to me have arrived intact. I have, however received heavy items in old grocery store boxes, haphazardly stuffed with loose newspapers.

The damage was clearly caused by inept packaging.

Twice, I have asked for the sender to properly package something, you know buy a shipping carton, use foam peanuts, etc., even offering to pay all the costs. The shipper is hesitant, whining about the time to get the PROPER materials, time to use the proper materials, what a waste of money it is, etc.

I always end up telling him to FORGET IT!

It probably would be really cool to build one from the box, but
they are rare and very expensive. You might find just as much
satisfaction from finding one that doesn't work (or work well) in good
cosmetic condition and then rebuilding it. After all, most of the old
carbon composition resistors will be out of value, the electrolytics
could be bad, etc. I am reworking a SB-300 now, and it is close enough
to building it new to suit my tastes.

> And that's just my opinion, I could be wrong. :)

And then again, you might be right.

I have a beautifully built Sailor HF AMP. This one has two RCA 8122
ceramics tetrodes which checked out full output.
All the tuning is done with servos and the band settings are set with
brass slugs. Built under high standards, rackmount, very high quality
components including a large cooling fan. It was removed and fully
functional from a cruise ship that went to solid state. This amp puts
out about 800watts with very little input. It has a built on solid
state pre-driver stage which can be bypassed if need to. It's complete
and in excellent condition. It requires a power supply and controls for
the servos. No manual but can be found at marine electronics shops.
Sailor is still the leader in Marine and satelitte communication
networks. I will send jpgs by request to anyone interested. I want
$400+shipping for it. The tubes alone cost that! Roughly 45 lbs

I have a TH77A. The best $35 I spent was for a service manual from East Coast transistor. They are KW's parts asnd service vendor in the east. There is a fairly complete set of mods out there on the web with text and ascii diagrams. Do a web search for th77a and mods. I haven't done them because I'm just not that interested in the bands opened up. If I was still attending airshows as I once did, I'd probably do the 108 - 135 AM mod, but as a 2M/70CM HT it does me just fine.

Hi OM,

Open up the radio. Under the top plastic over you will find a metal shield covering the entire main chassis (not the amp portion). Remove it. Under this, you will find a second, smaller cover over the VCO. The two coils at teh back of the radio are the TX and RX VCO; there is a larger coil in the front section. Only adjust the back, small coils and keep track of the number of turns. They generally have ferrite slugs and these must be backed out or removed completely to get the VCO to lock above 50 MHz. Some people replace the slugs with aluminum slugs since the aluminum core will decrease the inductance of the coil. You should find that the radios will lock up once you extract the slugs a few turns or remove them entirely. Noise figure above 52.525 will be degraded since the front end low pass is generally not tuneable. (Some older units had adjustable coils, but most do not). Good luck - I have amde a dozen of these radios go on six and they work well.

Walter:

Mine has been modified. This disables the "automatic offset" feature. In order to put an offset, you must enter the offset amount in KHz(00600 on mine for 600 khz, I think) in addition to the + or -. Mine uses tones in those channels just fine, so I don't know what could be wrong there. You have to enter the two-digit tone "code". I taped a chart (from the manual) on the back of my battery that shows what frequency goes with which code. Of course, you can always try them until the repeater opens ;-).

Mine is 15 years old, has had a few minor repairs, and I replaced the finals a couple years ago. Still ticking!

The ARRL repeater handbook lists the tones which are publicized. Otherwise,
you need a tone reader on the receiver. Usually there is enough
bleedthrough, even when it is not intentionally repeated, to read the code.
If the skip is right, listen on the input with the tone reader.

If there are no frequency related spurious (harmonics and the like) then a simple band split combiner will be adequate. If, on the other hand for example, some particular harmonic of, say the 2 meter transmitter falls within the passband of the 6 meter receiver, there ain't no way you're gonna make it work anyway. Suggestion: Try the two repeaters through a combiner into a dummy load and see what happens. Band reject duplexers, the kind we can afford, do not suppress out of band emissions very much. A transmitter suck out cavity on each opposite receiver may be necessary, depending on the specific hardware. The old tube type boat anchors were better in this regard. We all had to relearn the isolation curves when solid state came along.

There had been discussions about how some of the programmers
hired to "fix" the Y2K problems may be planting future problems in
the form of viruses and time bombs. Also there is concern that many
of the foreign programmers may be doing industrial espionage This
may lead to many companies not using contractors in the future due to
fear of those that are not under company control.

:Hackers Seize UK Military Satellite - Report
:
:February 28, 1999 6:42am
:Reuters
:
:LONDON (Reuters) - Hackers have seized control of one of Britain's military
:communication satellites and issued blackmail threats, The Sunday Business
:newspaper reported.
:
:The paper, quoting security sources, said the intruders altered the course
:of one of Britain's four satellites which are used by defense planners and

:military forces around the world.
:
:The sources said the satellite's course was changed just over two weeks
:ago. The hackers then issued a blackmail threat, demanding money to stop
:interfering with the satellite.
:
:``This is a nightmare scenario,'' said one intelligence source. Military
:strategists said that if Britain were to come under nuclear attack, an
:aggressor would first interfere with military communications systems.
:
:``This is not just a case of computer nerds mucking about. This is very,
:very serious and the blackmail threat has made it even more serious,'' one
:security source said.
:
:Police said they would not comment as the investigation was at too
:sensitive a stage. The Ministry of Defense made no comment.

Hi Folks,
I have for sale a VERY nice condition Ten Tec Century 21 "digital"
HF radio. For those that don't know, this is an all solid state
HF radio covering 80/40/20/15/10 meter bands. Power input is
60 to 70 watts. Has a built in power supply. Had a digital red LED
frequency read out. Is CW only with full break in (QSK).
The PTO is very smooth, only some dust here and there. All switches
working well. Output is 40-50W on all bands. Has three filter
selections (2.5Khz, 1.0 Khz, and 0.5 Khz selectivity).

For those that collect Ten Tec gear, or just like using it, this
one's for you. A great rig. Was my novice "dream radio" back in the
late 1970's --- now I upgraded to running the Collins S-line in
split configuration so it's time to pass this on to someone
else. I can't seem to find the owners manual, but, will get
a copy if you so desire.

Would like $250 + shipping/insurance for this radio.
thanks,
Joe K7JOE

From: Raymond Hutchinson <rdhutch@earthlink.net>
Message-ID: <36DE24F6.73FA@earthlink.net>
Source record: 115092

A few weeks ago I posted a question here asking if others had
experienced erratic tunung/ function of the "multi-Function" control on
Alinco DX70's. I recieved many e-mails stating that a number of these
radios had this problem.

I am very happy to report that I took my radio to Alinco USA in
Torrence CA, and they cheerfully fixed it for FREE, while I waited, even
though the radio was long out of warranty! They only need the control
head to do the repair. Told me that two capacitors linked to the
control have too small a value, hence not enough time delay constant,
causing the erratic operation. They replaced the caps and now the contol
is rock solid. Otherwise. I really like the radio.

Thought I should pass along this info!

Well I use em all at various times. I've shipped or received around 30 items via UPS in the last year or so and still have not had a problem. I have received some stuff that was poorly packed that survived anyway.

The PO Priority service is good for small items but gets pricey as size goes up.

I use FEDEX at work for overnite shipments, but they are also too high priced for ham stuff or anything else that can stand a few days in route.

I tend to avoid buying from individuals who want me to pay for professional packing for typical ham items. Would be OK for things that need to be crated, like say a R390 or a 77SX. Bubble wrap, plastic peanuts, and cardboard boxes are easy to come by. I recycle packing materials and rarely have to actually buy any. I sort of assume that folks that can't handle routine packing are questionable and best avoided.

Jack,

Interesting correlation, which after thinking on past deals like
that, I tend to agree with. Often, too, these folks don't tell
you about the 3rd party packing being part of the shipping costs
and now I ask about that specifically, since being burned once or
twice by those substantially extra costs.

He was asking for mods for the new FT50's, the old FreeBand
mod is not working, goto my page and download the FT50 Software
the normal mods and the second generation mods for all FT50's
are implemented in the Software.

Read the manual by the way.

On the same page is the Software with the Software mods for
the VX1R also.

No need for the ADMS in both cases.

Greetings, ...

The LF head with coils and UHF head can't be all that rare... I picked up a set with the 3 heads, all coils, power supply/meter, all manuals in excellent condition in a fitted wooden case for $40 , at which point I sold an LF with incomplete coil set, a spare UHF, and a couple of standard heads. All were bought over the years for trivial cash. I probably would not want to sell the set for as little as $295, although that would be a fair price for it. The performance of the 59 in all frequency ranges is outstanding compared to other brands, and well worth having if one has a need for such an instrument.

I need 4 small knobs for a SX99 with the silver inserts.
I think the knobs from a 38 would also work.
I could use knobs that the plastic is in bad shape as long as the
metal inserts are good.
I have 4 knobs without inserts.
Thanks Port

I have an unbuilt HW-101 that my wife bought and did nothing with
years ago. It's still on my list of projects to do, juggling with
my other hobbies such as woodworking, and remodeling my 114 year old
house. No, the HW-101 isn't for sale, so don't ask...

From: lcoe@convex.com
Message-ID: <7bk8c6$enj@phoenix.rsn.hp.com>
Source record: 115146

i have always assumed that the signal was xfmr coupled, 1 input, two
outputs and that was the source of about a 3db loss.

but i measure continuity on all legs. what inside this thing?
what would a schematic symbol look like?

can i take it apart without destroying it? will i be able to
see the actual components? or is it all potted full? is a 1x4
splitter built the same way?

thanks,

loren respond to lcoe@rsn.hp.com

p.s.

this subject has come up in TVRO, folks say you can use a standard
splitter w/an added cap on one leg instead of having to order a
special "dc-pass" splitter from a BUD dealer/supplier.

Message-ID: <7bkd24tni1@nnrp1.dejanews.com>
Source record: 115151
Body handling: HTML body converted to readable text

Here's what I found on the ARRL WEB Extra Pages:

Alinco DR-M03SX 10-Meter FM Mobile

Alinco has announced a new 10-meter FM mobile, the
DR-M03SX just in time to take advantage of the
improved band conditions. It's so new the Alinco
Web site hasn't added it to its pages yet.

The M03SX offers 10 W and 100 memories, CTCSS
encode standard with a decode option, adjustable
repeater offsets, and a DTMF mike.

Alinco says the new radio, which has a suggested
retail price of $260, is smaller than a standard
2-meter mobile and it has begun shipping units to
dealers.

Manufacturer: Alinco, 438 Amapola Ave, Suite 130,
Torrance CA 90501; http://www.alinco.com/; tel;
310-618-8616

By the way, join the ARRL, and you can sign-up
for the extra information like this. :-)

73,
Bob

Universal Radio in Reynoldsburg Ohio has them. They have an address and phone in most the Ham magazines or you can call them at 800-431-3939. This board is very easy to put in and instructions come with it. I put one in my TS-450S which uses the same board. It screws down to the main board and has a pigtail that plugs in to a socket.

<< I put one in my
TS-450S>>

I read in a previous post that you installed a tu-8. I think I bought one of these to put in my kw 440 so that I could hit 10-m fm repeaters, To my dismay, I cant find any advice on which tone to set so that I can access diferent repeaters when 10m is hot. Its kinda catch-22, without the right tone, I cant hit a "toned" repeater and without talking on the repeater, I dont know what tone to use. Does anyone here heve advice/experience on what would be the best tone to set to hit 10m fm repeaters? (its rather inconvient to repeatedly change the tone frequency when the board is installed)

Brass wrote:

> A cabinet is a cabinet the transformer will take on two more tubes without
> even thinking about

The stock transformer has a hard time handling just the two tubes that
are in it (the JB10-80 model).

The JB2000 does not have enough drive from the built-in driver to 'tax'
the transformer...

> The one knob wonder w/ a bypassed driver

And the smaller transformer!

> Sounds like he may have had the driver circuit hooked back up

That means even LESS output!

Paul-

I purchased my TS-120S with the intention of using it mobile. Then I found it worked so much better than the old rig, and never got around to putting it into the car. I used it as a base station until I got a TS-430S several years later.

If you get a good one, it will serve you well. That doesn't mean they don't have problems, however. I had two problems worth mentioning. One was a frequency drift, since it uses a VFO rather than a crystal-controlled synthesizer. That one you can live with.

The other problem is a show-stopper. It seems that some of the radios exhibit a problem where the transmitter output continues, even though you have gone back to receive. Something oscillates on a frequency determined by fate, putting out a carrier at full transmit power. Mine was repaired, and wasn't doing it when I finally sold it.

I understand that the repair includes incorporation of some factory mods. There are also notes to be found on the web, on how to fix it by improving the grounding scheme among the various circuit boards. Because of this potential problem, I would not recommend the radio unless you could verify that all the factory mods had been incorporated. The price is good, but any additional cost for repair might make it a bad deal.

On the other hand, I would highly recommend the TS-430S. It is old enough that the price should be reasonable. It has the crystal-controlled synthesizer for good frequency stability. It has an internal jumper that will activate the WARC bands when disconnected. It also has an option available for Ten Meter Narrow Band FM. I never had any trouble with mine, and only replaced it because the newer TS-690S has more memory channels and operates on Six Meters.

This sounds familiar.
Except in my case its the Icom M127 Marine vhf rigs we've sold...
They all fail in a few different ways in the first month (or less)
and sometimes make up to 3 trips back (and counting)
BUT Icoms Offical Word is 'there is no problem'. <G>

Guess what brand we now refuse to sell.

Hi George
I ended up with four complete units over the years. All in excellent
condition and all with brand new tubes. By the way they are the only
four I have ever seen anywhere. These instruments got bought up very
quickly about 2 years ago after some article that was written about
them. They are by far the very best there is in an instrument that does
so much and should be part of everyone bench. At $295 it's a steal.

I use a BayPac modem and HP200LX Paltop PC running BayCom software.

> also how do i communicate with satellite at 5Watts? is there a special
> antenna for that?

Well... for Mir a simple ground plane antenna is all the is needed. It's
quite easy to work with a ground plane, I do it mobile from a patrol car
with a mag mount antenna and at home with a homebrew J-pole.

> Any suggestion for having more fun with this radio is appreciated thanks :)

You can work AO-27 with the rig with just a simple whip antenna. I use my
FT50 and a MFJ-1715S to work the bird almost daily. The Arrow antenna will
work much better, but it costs a bit more than the whip. The price of the
Arrow is not very expensive and you'll have an excellent antenna!

2950. Trade Mac Performa 6200 for good HF rig

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-03 00:00:00 UTC
From: rpemers@aol.com.alt.edu
Message-ID: <19990302235831.20410.00002359@ng-fz1.aol.com>
Source record: 115183

I am currently getting back into Ham radio and need an HF rig. Since I got a nice new PC for Christmas, I have a Macintosh Performa 6200 that we don't use any more and I would like to trade it for a good late mode HF rig with WARC bands and general coverage receiver. Something like the Kenwood TS-140S I used to own. The Performa 6200 CD is approx. 3 years old and comes with 1.2 gig HD, 40 megs of RAM, 15" multiscan monitor, internal CD ROM drive, an Iomega zip drive with 10 zip disks, a connectix QuickCam, USRobotics 56k X2 modem, an Epson Sytlus 500 printer(only prints in B/W for some reason), microphone, joystick, all cables and some software. I am the original owner of this computer and it is in excellent condition. A stated earlier, I would be interested in trading for a late model HF rig in like condition and value, which I would say is between $450-$550.
If interested please email me at:

From: wardseward@yahoo.com
Message-ID: <7bij2faae1@nnrp1.dejanews.com>
Source record: 115185

I am getting a VX-5R soon and I really want to be able to program it with my computer, but I'm a Macintosh user (BTW, PC vs Mac isn't the point here.) So, I'm wondering if anyone has ever homebrewed a cord, and used the Yaesu software or Eve (shareware), and Virtual PC (running Windows95) to program there VX-5R or VX-1R? I'm sure it can be done, but I have no idea what pin does what when i would convert from com plug to mac serial plug. Any help?

BTW...I currently have a copy of EVE and have ran it on VirtualPC...on radio yet though.

TR (and others): Seems to me that there should be some commercial
outfits out there that would be able to do the packing better than I
would be able to do it myself. Does anyone have any experience with
taking BAs to these outfits?

You can buy it in Japan for $1250 (does not include the free Tuner). I ordered one from a
Store called the T-Zone licated in the Akihabara. All English Speaking Salesman

and Used my Platinum MasterCard (2 Year Warranty) plus shipping $35. Very Happy with the service. Hey If you Order from HRO
or AES and the unit breaks after 10 days they say to send it to Icom/Kenwood/Yaesu and will not exchange it anyway. Why deal with them if they won't back up the product. I got a 30 day NO QUESTIONS ASKED return policy from the T-ZONE.

This Saturday, March 6, is the Split Rock Amateur Radio Assn Hamfest, in Parsippany NJ, Route 46 and Baldwin Road. This is the first hamfest of the season in the Northern NJ area and is well attended by vendors and buyers with cabin fever. Easy access from Interstate 80 and 287, talk in on 146.985, PL 131.8 and on 146.52 simplex. Short drive from anywhere in NY metropolitan area and Eastern Pennsylvania. VE session for getting/upgrading the license. League speaker is Ed Hare, W1RFI, from ARRL Hq. Tailgating if weather permits.

Vendors, 6:30 AM, buyers 8:00 AM. VE Registration at 8:30 AM for examinations to begin at 9 AM.

Well, the "mailbox etc" stuff Ive gotten was really bad!! I suspect there may be better ones....but I suppose it will take an education....first off they should outlaw "peanuts" for anything over 3 pounds...they are a radio and amp killers!! The problem is incoming...one time shippers will act like they know the ropes and do not...OH well, I give up...there is no good answer except Fed Ex...which means as ususal, the answer is MONEY>>> 73 Murray

I have had problems wih two of them. Mostly the keying switch doesn't hold up. In one case, the
switch gave up entirely, the other switch had to be mashed hard and then it was intermittent. I
didn't know others were having problems also.

"Mailboxes, Etc." does both packing and shipping. Be prepared to pay the price, however. Charges will be approximately twice what buying your own new materials elsewhere would cost, with shipping charges and service fees running almost twice what UPS would charge if you brought the box to their customer counter yourself for shipping.

First point Clint cross posting is very declasse' one group
is enough for this or don't you understand how to set up
Dejanews? That's what I thought.

As to your comments frankly I don't believe you. Your credibility
while never high has continued to slip with such claims as:
1. "I got a free upgrade" later denied by you but we all saw it.
2. RT Systems "free tech support phone number" absolutely not true.
The list goes one but you get the idea.

I guess being right and putting people down is more important than
truth and honor to you, that being the case I withdraw. In the future
I'll just refute your BS on an as needed basis so you don't mislead
those who are not yet wise to you.

Yes. Mail Boxes Etc will pack items for you. I sold a couple of R390s (80 lbs each) and at the buyers suggestions I had them pack it. They did a good job but I stood and watched them do it.

Hello from Vienna!

Today I've got a Plessey R 2250 HF receiver; was used in the past for air control as a remote
receiver; looks like new.
Does anybody know this receiver and has some information about it. Fine would be if anybody knows an URL dealing with this one (f.i. the URL of Plessey). Does anybody know what was the price of this receiver back in 1978 (or so) ?
Would be nice to send me an answer to my questions.

2986. Re: FT50 Software Mods

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-03 00:00:00 UTC
From: Vito Villamor <vovillamor@yahoo.com>
Message-ID: <36DD5EF3.3E0000B8@yahoo.com>
Source record: 115219

Try this page for Yaesu FT-50 software mods:

http://members.aol.com/aeimn/ft50/index.htm

There's some good documentation and pictures here.

The MARS/CAP mod is fairly simple, even if you're a little
rusty with a soldering iron. The solder balls are pretty
big and easy to get to. I used an iron and solder wick to
soak up the solder. The Freeband mod, on the other hand,
involves removing a small resistor in a tighter space than
the solder balls. You can do it, if that's what you need or
want. MARS/CAP is all I really needed.

By the way, there are software mods available that do the same
thing as the hardware mod. If you have the ADMS software, you
use the programming cable that it came with, and download the
software from the Internet, and you can modify the FT-50
for MARS/CAP or Freeband without taking the radio apart. The
only drawback is that the radio resets back to factory settings
(standard unmodified tx and rx), if you have to reset the
radio (but when was the last time you had to do that with anything?).

I've had success with software mods on my VX-1R (took some time, but
got Freeband mod), and on my VX-5R (worked on the first try). The
software for these mods were very well written and documented (Thanks
to the amateur radio hobbyists that took the time to create these
programs...). There are instructions on the Internet about how to
modify the file that ADMS creates for the FT-50, and then in turn, the
modified file is downloaded to the radio and modifies the radio. The
instructions were clear enough as I read them, but I had some problems
and needed to get my FT-50 modified for the next day, so I ended up
doing the hardware mod for MARS/CAP.

The key to the software mods is the cable, and as of now the cable is
only
available with the ADMS software. Or, you can build an interface cable
if you really want to (it's not a simple adapter cable; it's a 4
conductor
plug from the FT-50, to internal circuitry in the interface, to a serial
connector on your computer).

Good luck with your mods, let me know which one you do...
---Vito

Hello Group,

Purchased a very clean FR-101 and would like to obtain a users manual as well as service manual. I would also like to find out about the 6meter and 2meter modules that fit inside the FR-101. There is also a slot for a FM board. In short want to purchase all the options including the matching transmitter and all the xtals for the FR-101 can anyone on this group give or direct me to were I might find this info?

Thanks and 73

2990. HUMOR: SSB and the Y2K Bug

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-03 00:00:00 UTC
From: bdiaz@my-dejanews.com
Message-ID: <7bhulepfa1@nnrp1.dejanews.com>
Source record: 115270
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.dx

While the press has said a lot of the upcoming things that
can go wrong with computers, come the year 2000, little
has been said regarding something VERY important to Hams.
Who cares if the world comes to an end, if you can't work DX?

When SSB was developed, it was a means of compressing more
usable frequencies in a given Band. Thus, rather than take
6 kHz for voice with DSB, a SSB signal takes about 3 kHz.
While we like SSB for not taking up as much space on the Band,
it was never designed to handle the extra digits found in the
year 2000.

No one know for sure what will happen, but some fear that all
the SSB radios will read the year 2000 as the year 1900. This
could be a real problem, because we all know that in the year
1900 SSB didn't exist. Not only that, the AM and FM modes
didn't exist!!!!

It could be, that come January 1, 2000, all radios will only
operate in CW mode; the only mode that existed in 1900.
This could be a major problem for the "No Code" Hams and
those who learned the code "just to pass the test" and
forgot it after that.

It's believed that the year 2000 will cause a major shutdown
of all electrical power in the world when the computers at
the power companies crash. If so, this would be a MAJOR
reduction of QRM. Add to the fact, that we're in a good
position in the Sun Spot Cycle and we have a super chance
to work some great DX before the world comes to an end!!!

I pity the poor Hams who haven't worked on their CW skills
when this happens. Still, they have about 9 or 10 months
to build up their CW skills, before the whole world comes
to a "This Program Has Performed An Illegal Operation And
Will Be Shut Down" end!!!

SB-300/SB-400 are amateur band single sideband and cw
receiver/transmitter
combination. Know as the Heathkit twins. The price of $70 each is
good,
especially if the speaker and power supply for the transmitter is
included. Make
sure you have manuals and a microphone would also be a plus. 73 de
Fred.
PS. It is vacuum tube equipment.

I never use this thing anymore since the Computer/Sound card
revolution. It comes with all the cables, manual, orginal box, and a
nice little switching interface unit which allows you to switch between
packet, rtty and voice without disconnecting the mic cable on FM 2 meter
rigs. This switching unit is for Kenwood rigs using 8 pin mic jacks.
The cables I have were used on a 440s and a KNWD 2 meter rig.
$75 if interested e-mail jstanisi@isd.net ......Jim WG0D

I would look for an alternitive, I bought mine with my 847 (before they
gave them away). I find it to be extremely SWR sensitive, my autotuner in
my 920 tunes better than the FC20 into the same antenna. Just not enough
fine tuning.

good luck, K1SWR

Try www.batlabs.com for the cable and rib and then goto www.mot.com for the
software.
The local Motorola shop didn't want to sell you a the software because the
software must be purchased from the Big M and a user site license agreed to.
Only problem is the software is about $300.
Maybe cheaper to just have the local shop program it for you.

From: take2@my-dejanews.com
Message-ID: <7bm93vgee1@nnrp1.dejanews.com>
Source record: 115036

I've been reading the posts on the VX-5R since they first appeared in the news servers. Anyone know what the current status on the CTCSS is? Does it still have that bug? If it has been fixed, starting with what serial # would it be considered fixed?

Should the ICT8A be considered instead of the VX5R? I'd like to get some more information before I put some $300 dollars into an HT.

Gerry,

Started on licenses from scratch last July, bought a 418 and "Ham University" in July, took tests in August, received General class ticket in September. I am NOT a rocket scientist. The 418 works very well, has good battery life, provides enough options to keep you from getting bored, and is very helpful at code drill. Negatives? LCD screen kinda dim. That's it. Buy a cheap earphone at Radio Shack so you can use it in public without irritating people or use it at home without conflicting with someone else's TV, sleep, etc. I'm using my 418 now to head toward Extra which I hope to get before the end of the year. Starting from scratch with the code, I recommend you get a program like Ham University to learn the characters and drill with them, then use it and the 418 to build up speed. Ham University, by the way, has all of the written exam questions and presents them in drill or exam form. Even has a morse code game. Good luck.

> are implemented in the Software.

Maybe that's why I couldn't successfully software modify my FT-50, and ended up doing the hardware mod. Once again, though, the hardware mod for
MARS/CAP was fairly easy for me to do. If it wasn't, I would've spent more time with the software mod. My FT-50 was fairly new; purchased late last December from HRO, Anaheim, so I pretty sure I was using mod software that was incompatible with my radio.

A good round of applause and appreciation needs to go to you, Mr. Goran, and to others who have helped us software modify our radios.

All in all, though, I sold my FT-50 (after owning it for only 2 months) and bought a VX-5R. And the first thing I did with it was software modify it...

Thanks again for all your efforts,
---Vito

Gerry,

I echo the other response. I picked up a 418 a few weeks ago and I am pretty confident that I will make the jump from my prior plateau of 14 or 15 wpm and pass the Extra code test on 13 March. I use headphones and study on the bus for 20 minutes each morning and evening. It helped me get past the stage of visualizing dots and dashes to reach the stage of recognizing them by sound alone. One last thing, I recommend changing the factory settings so that the character is only displayed after it has sounded. This change seemed to help me learn to copy a character behind the actual code.

Good luck. You can do it.

i posted this one a while back and not too many people seemed concerned. guess its time to post again...
i have a close ham buddy that works at miami international airport. when a package falls off the UPS conveyor belt it goes in the dumpster. the employees and supervisors both do it. this individual works nights and has witnessed it many times. i wont ship UPS, period. if its too heavy for USPS then i take the trnsfrmr out to meet weight limits. i have had usps only loose one and break one. i dont think thats all that bad considering i've sent over 60+ packages with them. priority mail is handled by a vendor. lots of the goof ups i hear people complain about are related to priority mail, not parcel post.

fed-ex is nice but their prices are out the roof. i'll stick with usps for now. havent filed an insurance claim yet so dont know what thats like. robert ke4mcl miami fl

3036. Opinions on Yaesu FT757 variants

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-04 00:00:00 UTC
From: weiss@tds.net
Message-ID: <7bmj7h$ad9@news2.tds.net>
Source record: 115052

Hi,

I'm close to upgrading from my ancient HW-101 to a "newer" rig.

The brand new rigs are all well over $1,000 with decent feature sets so they are unfortunately
not an option.

I am looking for:

General coverage Rcx including wide filtering for SWL, full breakin CW,
a hot yet selective receiver, and some QRM rejection capabilities (like IF notch). Autotuner a
big plus. RIT/XIT.

The FT-757 seems to fit this bill, except that as an early frequency synthesized rig it apparently
is prone to phase noise and is thereby "noise limited" in its dynamic range.

Is this a major concern?

How does the 757GXII differ from the palin ft-757?

Thanks,

Jeffrey Weiss N0IRR

3037. FS /Trade Sony Mavica FD-7 Digital Camera (MINT)

Hello to the group,
My name is Mark (KC4NYH) and I have a Sony Mavica FD-7 Digital Camera, the feature are as follows:

1.5 hr battery with quick charger,
2" X 2" Color LCD monitor to view the snap shots,
Writes pics to a 1.44mb floppy drive for PC & Macintosh formats,
Menu driven interface for the following:

resolution change (high/low)
format disk
delete pic from disk
look at thumbnail shot of all pic on disk
and much, much more...

unit has built in flash,
10x zoom,
digital special effects,
auto / manual focus switch,
auto lighting adjustment,

This is a VERY NICE camera for anyone who needs fast digital photos without the hassle of interface cords, cards, and other forms of downloading the pics to the PC!

Can see some of the shots I've taken with this Camera at:
HTTP://www.mindspring.net/~chainsaw1

I paid $700.00 for the camera new about 5 mos. ago and it's got about 2 hrs of use on it (Like New!)
I will sell it for $500. or I'll trade it for a Icom IC-271a with pre-amp and DC power supply options installed.
Or I will entertain the idea of trading for (4) Cushcraft 13B2 beams with phasing harnesses!

Contact me at:
KC4NYH@mindspring.com

Looking to sell one Alinco DJ-580 HT. It is in good condition. I just installed a new keypad since the old one was hard to read. It comes with two 12V, 1300Ma, 5W Ni-MH battery packs and a drop in trickle charger which takes about 14 hrs to charge. Both packs have seen very little use on them-no more than 5 uses each. I'll thrown in a basic MFJ mic with the unit too. Looking to get around $175 for everything. If interested, let me know. No reasonable offers refused.

Dave,

Telrex has been out of business for some time. Their antenna's were built
to last. Try www.contesting.com and go to Antenna Ware. It's a mail list
where you can post for parts that you need. I understand that the doorknob
caps go on occasion.

I currently have a Kenwood TM-741A installed in my pickup truck
and I have the optional UT-50 6M module installed in the third
band slot. I have tried to find in the manual for this radio if
there is any way to change the factory programmed 1MHz offset for
repeaters on 6M, but can find nothing. Anyone out there have any
experience with this?? I need to be able to set a 500kHz offset
to work a repeater here in Western NY that does not have the
standard offset. You can e-mail me directly at :
jnbmoore@pobox.com. Any help would be greatly appreciated. I
cannot get a connection with the Kenwood communications website,
so I thought I could try here.

Gerry,
I got the MFJ 418 a few months ago and like it a lot. Nifty little unit!
You can set it up YOUR way and very easily. Try it out, I think you'll like
it.

>RT Systems' toll-free phone numbers are only good in the U.S.

RT Systems toll free numbers are also only for ordering. The numnber
for ADMS tech support is 256-880-3093 and that is not toll free from
anywhere but a very small part of Alabama. But you knew that just like
you knew where I lived didn't you Clint? I guess you would rather be a
liar than be wrong, your choice.

I'm not really interested in Clint bashing I'm only interested in the
truth. You tell these fairy tales about free upgrades and toll free
support lines for whatever strange reasons you have and people who
believe you are doomed to disapointment. Who are they going to get
pissed off at--not you but at RT Systems. The question is why are you
mad at RT Systems? Apparently you are because you are setting them up
to have a bunch of mad customers as a result of your lies. If I were
RT I'd be on your case by now. See if you can justify your actions
without lying about what I said. This should be good.

I had a 757GX years ago.
After talking to many people, I traded it in for a Kenwood TS430S.
The 430 is a great deal better.
Then I got a 440, and 850.
The 757 is not very good.
Pretty rig though!

3048. WTB: Your Old Calculator

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-04 00:00:00 UTC
From: floete@aol.com
Message-ID: <19990304172651.07557.00003652@ng-fa1.aol.com>
Source record: 115064

Let's say you've got an old calculator hanging around doing nothing but taking up space. If that's the case, why don't you unload the poor thing on me -- and you'll have a wee bit more $$$ to toss at whatever else you might want. I'm mostly looking for the older LED-type handheld calcs from the 70s or so, the ones with the blackish screens, often with glowing red numbers, as opposed to those you see most often today, with their typically grayish screens. I'm looking for all makes, all models, including (but not at all limited to) those from Hewlett-Packard (HP), Texas Instruments, Casio, Sears, Adler, Wards, Olivetti, Canon, Bowman, etc, etc. The thing may seem crummy to you, but to me it may not.
Plus, if you've got the old manuals, cases, chargers, so much the better. Just drop me an email (floete@aol.com), maybe we can work something out, because these things fascinate me! Thanks much, Erik

3049. Re: Opinions on Yaesu FT757 variants

Message-ID: <36df16a4$1$vtanpl$mr2ice@news.uga.edu>
Source record: 115065

It all depends on your budget. Among the small rigs in the $500 range, such as TS-430, FT-757 and IC-735, the last one is a big winner in quality and feel. Among more expensive rigs, IC 751A is a much higher class but I am not sure whether it can have an AT. If you can shell more, TS-850 is a bargain, as AT versions can be had for as low as $900. Good receiver with real AM filter, very nice signal, good filtering, much better AGC and BK than that of the cheaper rigs. Excellent sensitivity and no AF hiss.

That's because you need to buy the s/w("RSS") from mother Motorola.
You must sign a rather lengthy contract before they send you the RSS.
Though I don't recommend this, people seem to be able to get RSS by
posting a msg in the rec.radio.swap NG. Be advised that if Motorola
catches you with copied s/w you can be fined _big time_, or even jail
time. As for the cables and RIB, go to www.batlabs.com for schematics
on these.

Source record: 115098

can the Yaesu FT-847 operate submerged or after a ten foot fall onto gravel? I'm looking for an all band, all mode extremely rugged radio and so far I've found nothing. Someone suggested ruggedizing a CW QRP kit but that isn't what I *really* want, even though it'd be an option.

Well the 706 (mark none) has less power on at least 2M band (maybe 6m
as well) as the 709mk2 the mk2g has 440 band as well as the other.

I have heard that the plain 706's can damage the VHF circuts
somehow at high power HF use, but that there is a afirly simple fix
for that if you run into it.

Personaly I am considering the 706 mk2 g as a radio for myself
a tech for it's VHF/UHF SSB and general coverage (as well as being I
expect a better shortwave receivere than most of the ones I have now)

From: Richard Ferguson <raferguson@worldnet.att.net>
Message-ID: <36DDE1C0.4CA7226A@worldnet.att.net>
Source record: 115101

The 706 no mark has 100W on HF and 6M, 10W on 2M.
The 706 mk 2 has 100W on HF and 6M, 20W on 2M
The 706 mk 2g has 100W on HF and 6M, 50W on 2M, and 20 on 440,
(check me on the mk2 numbers, but I am pretty sure of the others.)

I have the original 706, and am very happy with it.
I understand that you can blow the 2M receiver if the
6M or HF antenna is right next to the 2M receiver, so I use
a diplexer to protect the 2M side from the other bands.
the original 706 had one connector for HF and 6M, and one
for 2M. I think that the mk2g has 2M and 440 on the same
connector.

I would say that they are all very nice radios.

Have you tried like the manual suggests and only write to the memory channels when in VFO mode not in another menu ? I think you are just not writing the memories correctly . The mmanual does not say you can write to the memories from any old screen you desire to do so from. I suspect this is the trouble, the cpu does not know what to do with a memory write from the wrong location.

Does anyone have any experience with the available code tutors, such as the MFJ series (413, 417, 418)? I've struggled for some time to learn CW & just can't quite seem to get it. I've tried some of the tapes (poor) & software (better). I'm thinking that maybe if I get something like the MFJ-418 I'll just keep the darn thing with me at all times & maybe that'll help! Any comments appreciated.

Nick -

I've had an 8100 for about one year now. I also own the Kenwood TMV-7A. The 8100 is a fine radio - small, easy to conceal. Real easy to program through the face plate, or with a PC (you can import frequency data from any other Yaesu radios you may own - FT-50, etc.) But I have become spoiled by the Kenwoods alpha tags and use it in the mobile (it's easier and safer to see alpha tags than freqs while driving) and now keep the 8100 in the base (where I can better see and remember the frequency I'm on).

How about opening the case of your 8500, and looking for the small green wire close to or on the back of the face plate. Cut or desolder it then reset your radio with wide receive option. For a detailed procedure got to www.qrz.com and check out their mods section. The 8500 is listed there along with many others.

This may be a little off topic, but has anyone had success eliminating electromagnetic interference entering an am radio through the loop antenna?

The interference is being generated by a photoelectric light switch that's in series with the bulb socket that operates a light over the garage door. You know, on at night, off at daylight.

If I must, I can eliminate the device but it's convenient, so I'd rather

not. I tried winding some of the 6 feet of antenna lead around a toroid

donut to try and choke it off, but it didn't work. Any suggestions besides changing to gaslight <grin>?

No code to passing 13wpm in 1 month. My personal testimonial.
http://www.cq2k.com
I only copy solid at 7-10 wpm but that is enought to pass the test.

My wife squeeked by the 5wpm just by listening when I was practicing.

It takes 30 min a day, but at 4 letters per day you get to 5wpm in
about a week. It's a little silly but it works.

Neebie question

I am buying my first mobile and am choosing between these three.
Which radio would you pick and why?

ICOM IC-2100H
YAESU FT-2500M
ADI AR-146

Any info is very appreciated.

THANKS!!!!!!!!!!!!!

Hello Richard:

I would rank the choices:

1) Yaesu FT-2500
2) Icom IC-2100H
3) ADI AR-146

The FT-2500 is the most rugged of the 3 and handles intermod very well. The ICOM is not far behind, I guess I would get the radio that has the best price of the 2.

The ADI-AR-146 is a clone of an older Kenwood 241 and should be the cheapest by far. If budget is important, start with this one. You can always usd it for packet later when you get a dual mode 2m/44 rig.

Hope this helps

Thank you very much for the reply. The ICOM and the YAESU are the
same price, so it looks like the ICOM.

Thanks again.

Ten-Tec only made one tube radio in its history. It was the TX-100, which was a tube-type novice transmitter made in the early 70's. It used a single 6146 output tube, I think. It had a matching solid state direct convesion receiver, the RX-10. I once owned the pair and sold them cheap. There were very few made and they now bring a premium price from die-hard Ten-Tec collectors.

Howdy.

How on earth do you change the repeater offset in an
Icom IC-u4E 70cm handheld???

The version I have is 7.6MHz and not particularly useful over here!
(VK has a 5.0MHz offset)

I have tried holding the lamp button down whilst fiddling with the
UP/DN switch (as per IC-u2) to no avail. Is then a bridgepad inside
or something to change this?? I have no manual, hence my request here.

HELP ! ! ! ! ! !
Pleas e-mail; vk3alm@ozemail.com.au

Don't worry: You'll probably find Y2K's impact on whether
people "want fries with that" to be practically negligible, Greg.

3135. FS: AOR 7030 with Extras

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-05 00:00:00 UTC
From: "Benjamin A. Wallace" <bwallace@sd.cts.com>
Message-ID: <01be66d0$d8cd0c60$3506a3cd@bwallace.cts.com>
Source record: 115005

For Sale AOR7030 (not +) but almost the same. Has the CPU 400 memory upgrade and alphanumeric tag upgrade plus the Noise Blanker and auto/manual notch filter upgrade. Also includes the remote control, box, docs. This radio is absolutely excellent operational and cosmetic condition. The AM sync and auto sync is awesome.
$825 shipped CONUS

If you are running split site (which I assume you are?) and
will not be using duplexers to keep the TX out of the RXs..
then you can easily tie the 2 TXs together by using a LP
filter for the 6mtr side with a cutoff of say 70MHz and a HP
filter for 2 with a cutoff of say 140 MHz....the COMET or
DIAMOND diplexers for crossband operation will work just
fine for this...or you CAN easily homebrew...
BTW a DUPLEXER allows you to operate DUPLEX (TX and RX)...a
DIPLEXER allows you to feed multiple TXs into the same feedline.
A CROSSBAND coupler (also called diplexer) allows different
freq band TXs OR RXs to share one feedline......

From: Oris <oris@dirtball.com>
Message-ID: <36DFD8B4.1A8D@dirtball.com>
Source record: 115010

Hello
I'm repairing a Cliperton L. I have replaced the rear waffer on the band switch. The band switch in a SB 220 will work less 10 meters. I was thinking about a seprate switch to do 10. Well thats not important now. I want to fix the parasidic chokes comeing of the plates of the tubes. The dentron schmatic calls for 100 ohm 2 watt resistors in that circuit. I was wondering being I cann't find any more of the 2 watt 100 ohm carbon resistors if I could use 2 1 watt 200 ohm resistors in its place. After I figure out what to here this amplifier will be finished and ready to go back on the air.
thanks for reading

Yaesu FT-840 in the box with mike, manual and packing material
included. Very low hours, cosmetically fine and working well.
No extra filters. Mike still in original box.
I can find one very light (no metal showing) paint ding
about an inch long on the bottom cover. May rub out.
Otherwise the finish is in "new" condition.
I've checked it and returned the unit to factory default settings.

$650 plus your choice of shipping from 78728.

Pre-payment requested,
multiple positive references available on request.

> Ignacy, NO9E

Of course the problem is that the amp only works on the TX side, so you may become one of the "alligator" stations ... loud TX and lesser RX so you either step on weak-signal stations you cannot hear, or weak-signal DX is completely missed by you as you tune across the band.

The antenna is always the first device to maximize, IMHO, given the choice between antenna and amplifier. Once you have done the best you can with the antenna (not heroic measures, just an effort to minimize feedline and mismatch losses and to maximize gain, preferred pattern, and F-to-B) then it is time to consider amplifying your TX signal as well.

Before doing either I am assuming that some attention has been paid to acquiring a rig that is optimized for the sort of operational modes and circumstances you emphasize.

If you never listen to non-Ham stations then why buy a rig that has a compromised front end for continuous coverage?

If you never run HF digital modes you may find some older hybrid (part solid state and part tube) rigs have quieter and more sensitive RX front ends than many of the newer rigs (the TS-830S and TS-530S come to mind).

If you wish to operate on the busiest bands during the busiest times then you will want to acquire a rig with above-average filtering and a nice tight
front end (the JRC JST-245 comes to mind).

Audio and IF DSP filtering is also a consideration (IF DSP is always internal,
audio DSP may be internal or external (the Timewave 599zx and NIR-12 are external audio devices which approach the task very differently and are considered state-of-the-art, you will need to study the specs and ask users to determine which is best for you).

Your choice of microphone, and proper speaking angle and volume, can make
a huge difference in TX as can the proper adjustment of the rig ...
distortion
from overdriven audio causes QRM and a loss of intelligibility.

Just a few observations ... mostly gathered from advice I have received
from
elmers and other experienced experts ... your mileage may vary, etc.

Hi,
You can use 1N4007, 1000V PIV, 1A for almost any power supplies. For signal diode, it is different, 1N4148 will do for silicon diode and 1N270/277 will do for germanium diodes.

Anyone know of a reflector specific to the vintage
Atlas rigs?

I am acquiring an Atlas 180 and it is coming only with a
partial manual. I'd like to acquire a clean copy (or a scanned
copy) of the compete manual and schematic.

Mods, etc. would also be appreciated. This may be my
only rig for a few months and I'd like to maximize it.

Thanks! & 73,
~~~

3167. HELP!: UHF/VHF range prediction

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-06 00:00:00 UTC
From: Ted Grant <tedgrant@earthlink.net>
Message-ID: <36E1AC81.459D@earthlink.net>
Source record: 114837
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.antenna,rec.radio.amateur.equipment

I am looking for [economical] ways to predict path loss between a base / repeater and a mobile/handheld at UHF/VHF.

I'm interested in "local" propagation-- a few miles to tens of miles-- in cities with tall buildings and suburban areas with houses and trees. I want to *quantify* the effect of things like height of base & mobile antennas, and environment, having an HT antenna inside the car, etc, on received signal strength.

I'm hoping to find some rule-of-thumb guides, simple algorithms or low cost software. [I'm not really interested in DX propagation or multi-thousands of dollar cellular industry software].

Thanks in advance.

Nicely put, David.

One additional idea - antenna height = gain.

Even on 20, the difference between being at 30 feet and 60 feet makes a bigger difference than doubling the weight and wind load of the antenna you put on the top!

DUCK - that should start some shooting!

3170. HT Antenna/Mic/Power Supply ?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-06 00:00:00 UTC
From: Dan & Julie Rakowski <rakowski@tir.com>
Message-ID: <36E1C5BC.868C3D1E@tir.com>
Source record: 114840

Hi all,

I received my Tech ticket in February. I've started making a few contacts through a local repeater using an Alinco DJ-191T, equipped with a 5W battery, Maha speaker-mic and MFJ "Long Ranger" 1/4 wave whip.

Two of my contacts reported something like "white noise" in my signal. I'm space-limited, so an antenna tower is off-limits. I'd like suggestions from those in similar situations on how to improve my antenna situation.

As a secondary matter, I've been looking at power supplies. I saw one in the HRO catalog (Astron RS-4A, 3A, 13.8 VDC, $39.95) and another in the AES catalog (AIM 38-384, 4A, 13.8 VDC, $39.95). I'd also like some advise from someone who's found a decent-sounding speaker-mic for use with Alinco handhelds.

Any advice you can provide is appreciated.

Thanks,
Dan

I don't have a VX-5, but I've been able to program the VX-1, FT-51 and
(with some difficulty) the FT-50 using Virtual PC on a Mac. I use the DIN
to DB-9 adapter that comes with the Mac Pac for the Palm Pilot, and just
plug the RT systems cable into that. I occasionally get checksum errors,
but generally it works ok. Of the 3 radios the FT-50 is the most
difficult to establish communication with --- often takes several tries.
The others usually work the first time. The Mac I'm using is a G3
Powerbook (the old style in the 3400 case) running OS 8.5.

That's like asking for a simple rule of thumb method for intergalactic
travel, with no knowns, and 1000 unknowns.

There's probably at least 999 answers. Pick one :-)

Here's the deal. It doesn't work that way. Find out where you want
coverage, and draw it on a map. Then find an antenna site that is
near the middle.. Climb the antenna, and put up a signal source that
puts out 40, 80, 160, and 320 Watts with a Morse ID. Then take
a field-strength meter and measure the actual pattern. That's the best
rule of thumb.

Here's another:

Path Loss (dB) = 10 log (4 * PI * D / L) ^ 2

Where D is the distance between two antennas in meters, and L is
the wavelength in meters. Make a computer program or
Spreadsheet that plots dB versus Distance, and figure everything
over 90 dB is in the noise; thus, some dB of amplification will be
necessary.

This is about as close as you'll get to a rule of thumb, but this doesn't
take multipath and intermod into effect.

3176. Re: FT102 mods (relays etc.)

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-06 00:00:00 UTC
From: "Michael J. White" <mike.white@erols.com>
Message-ID: <7bsmin$b10$1@winter.news.rcn.net>
Source record: 114846

>I've got chance of a FT102 cheap but I've heard they have relay problems!
>what do I do?

Buy it and join the cult. The 102 is a very fine radio. The problem with the DIP relays is that the contacts go resistive, but you can replace them or have them replaced. I had some luck opening the relay cases and cleaning the contacts, but they're tiny and you have to be careful. There's a guy who advertises in QST who works on these and will replace the relays with ones that don't go bad.

Other than troublesome relays, it's a great rig. You just have the same problem you have with other IC-based rigs of that vintage; finding parts. There are chips in that radio for which there is no known source; if one goes, you have an expensive paperweight. The only way you can replace them is to cannibalize another radio. However, many older radios have that problem, not just the 102, and chip failure is no bigger a problem with the 102 than any other rig.

You shouldn't pay more than about $400 - $500 for the radio alone, depending on condition. There is a very nice external VFO with memories (the basic radio has none), an even nicer antenna tuner, and a variety of speakers, one of which has a built-in phone patch. All in all, a real nice station. A complete station might fetch upwards of $1K, and worth it. Don't let the relay problem scare you; you can deal with it. Best of luck.

Well, Guys, I haven't looked lately, but in the old days, GE, Motorola, RCA, and most of the other manufacturers had slide rules, one page work sheets etc., for just what you are asking. Also, Db Products, Andrew, Antenna Specialists, Communications Products, Prodelin, and the rest of the two-way antenna manufacturers had essentially the same type of help items. Find an old retired two-way shop owner who kept all his old files.

Maybe you should cut the yellow jumper wire next to the red one but dont
cut the little blue one next to the batt.

3192. How to - Cable to portable stereo???

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-06 00:00:00 UTC
From: Greg <gregk*SPAM-B-GONE*@powersurfr.com>
Message-ID: <7bt79d$9mv2@dagger.videotron.ab.ca>
Source record: 114862

Hi, I would like to get cable stereo on my portable stereo that does not have a cable input. Currently I have a wire attached to the inside wire of the coax coming out of my wall. This is attached to an alligator clip which I clip onto the antenna. I have purchased a coax connector and have drilled a hole in the case for it. The connector has a male side that accepts normal cable and the otherside has two solder points. I was going to connect it to where the antenna wires go to the pc board but the antenna only uses one wire???. How would I connect my cable to get better quality sound than I do now? Do I need a 75 ohm transformer somewhere in there?

Thanks in advance, Greg.

I got to build quite a few Heathkits... (mostly test equipment, my dad
bought me a bunch of stuff when I was in High School, so I could set up
a little TV repair business in the basement)... I really wish Heathkit
was still in the kit business, now that I am older and have more $$....
I can't believe they went out of business....

I am chasing some information on a Digi Scan, UFO Model made by REDCO, Reliable Electronic Design Company from the US. It is very similar to the Digi Scan DS 400 made by DIGALOG TECHNOLOGY,INC also from the US, but instead of having rocker swiitches to program it has a set of pins which you swap around. This is where I am having trouble.

Any assistance would be greatly apreciated.

Thanks in advance.

Richard.

I am in the process of buying a new Mac. An iMac actually. I also wanted
to use VPC to program my FT-50RDH and sent an email to Connextix Tech
Support and here is what I got:

> I can't say for certain, but it's very unlikely that this program will
> function the way you want with Virtual PC... even with some sort of USB
> to COM port adapter since we do not access the COM ports or USB
> directly.

I read somewhere on their site that VPC access the Mac serial ports for
for modem and printer applications only. And you need to have the Mac
driver for the device you're accessing to do it. I thought it might be
different with the iMac since it uses USB ports but it will not work
either.

Stay safe !

This is the RS-6, a mid-50's vintage Spy Radio that uses smaller tubes
than the
RS-1. They are about the size of one's little finger. They are not
socketed, but
rather soldered in place and wrapped in copper foil. I have been
told that this is
the radio that U-2 pilots carried in vest pockets for emergency
communications
(presumably ground search and rescue). The left section is the
power supply, the
center is a regulator, the bottom is the receiver. A Morse Code
key can be plugged
in or a built-in foldout key is visible on the transmitter on the
right. I copied this
info from a web site I found
http://bluesky.com/warren/radios/spyradios/html.
Units appear to be complete and include the rubber pouches. I have
not powered
them up but I was told they are in working order. I'm sorry I
don't have any other
info .$300 Buyer pays shippng and insurance.

Greetings.

I have an ICOM IC-R70, which has no external connection for 13.8 volts dc power. However, internally, there is a jack (J1) which when disconnected, opens the circuit between the internal power supply and the 13.8 volt bus which powers the radio. I'm tempted to try wiring from my car's cigarette lighter jack to this connector to go mobile.

Has anyone out there ever done this? I'm a little concerned about damage due to inadequate voltage regulation, coming off the electical system of the car. Are car electrical systems adequate, or should I put a regulator between the car power and the radio?

Fred,

Your idea has merit and sounds fine!
It would be a good idea to install a fuse in the +12VDC line inside the radio,at the point you tap into the +12vdc.
Also a Diode in parallel with the + and - will save the radio if you make the mistake of hooking the +12vcd backwards.
Your comment of regulating the input voltage may not be important.
You should expect 12vdc to 13.8vdc out of a Car's electrical system.
Measure the voltage on the radios 12VDC line and see if it is at 13.8VDC.
If it is you are all set.
If it is right at 12VCD them you should regulate it down.
The next step would be to find out how much current the radio draws on the 12vdc line.
Find 2 diodes like a 1n4002 that handle the current draw.
each will drop the voltage .7volts when installed in series.
13.8 - 1.4 equals 12.4vdc. Close enough?
That is the cheap way.
A regulator takes a bit more work but and Let me know if you need to set one up.

Source record: 114889

March 4, 1999 filename: nss0304.txt

Merle Parton,

In case you don't know the latest developments at NSS,
let me update you.

NSS was decommissioned in early 1996. The sole remaining
facility employee is John Schorpp, the antenna man.

The towers and transmitter building are scheduled to be
demolished by September 1999. There has been an
appropriation of $4.2 million to demolish the site and
convert it to a wildlife preserve.

There is a group of people, including John Schorpp, and
now me, who learned of this development only this past
weekend, that want to stop the demolition and convert
the site to a museum of VLF radio technology.

As a member of the Antique Wireless Association, I wrote
a letter to its president last night, citing the few facts I
know, and asking what it might be able to do to aid this
venture to convert to a museum. The AWA operates a
large communications museum in Bloomfield, NY, just
south of Rochester NY. It has ties with the Smithsonian
Institution.

There is a public hearing in Annapolis March 8, 1999. The
time is 6:00 p.m. of the Lowe Office Building. That's all
the address I have. I have handwritten directions to it that
John Schorpp handed out at a hamfest we attended this
past weekend.

John Schorpp has asked me to ask you to consider putting
a notice of this meeting on the NSS Web page. I know
this is short notice, and there isn't even a complete address,
but let me give you my name and phone number: Pete
Sypher, 301-601-2711. I'm going to the meeting. I'm going
to spend time and effort for this cause of converting the
site to a museum, even though the chances of this being
realized are slim, in my estimation.

73, let me know what you think about all this.

Pete Sypher

Why would you expect anyone else to ship something better than you would do it. People just do not care about your stuff no matter how much you pay them. I had a summer job where we would ship air compressors and air motors and we would make sure the packing material did not contact the products being shipped. We wrapped all units in plastic. This should be the first thing when shipping any piece of electronic equiptment! Next try and ship it in the original box within a box. Peanuts are great for the outer to inner box packing material. Peanuts will compress during shipping so you need to have a tight box. By tight I mean you have to feel like you over stuffed the box. If the box closes easy you do not have enough! I like to use a lot of plastic tape (3M is good). The cheaper brands are thinner and you have to use more. This gives the box some strength around the areas the box can seperate, ie corners and seams. The item you are shipping should not move when you are finished. A good box is a must, I like paper boxes for mobil to hand helds. Much bigger boxes for heavier units. If the sender is getting cheap about the shipping then do not buy the item! Whats the point if it does not work when you receive it. If you are spending a thousand dollars on a radio $20 is not alot to pay for it to be packed well. To me $20 is not high for a $300 dollar item. I have actually used new paper, if you pack it tight it will work for light items, double boxed of course.

I have found some of these excellent 6B4G valves. 6C4C in Russia is
equivalent to 6B4G and it looks identical to the old Sylvania 6B4G
with double anode stapped together by a metal plate, not the type with
two separate anodes. The 6C4C valves is very well built and give you
an impression of high quality. It is unlike the new Sovtek 6B4G which
looks like a scaled down Sovtek 300B with a single anode.
E-mail me if you are interested.

Best regards,

Arnold Goksoyr

I've looked at the SG-2020, it's short on features and, while it could take small amount of rough handling, it's still vulnerable to a misplaced cup of coffee. I need a radio that can *operate* for several hours while submerged.

From: kb8tjx@amsat.org
Message-ID: <36e1b713.8249572@news.raex.com>
Source record: 114917

Hello to the group....
I am intent on putting a mast mount pre-amp up.
I have one up for 70cm, It is the ICOM unit
I have a RFC 4-310 in the shack. All work ok, including outside or inside Pre-amps, powering outside via coax and 12v from radio up the coax.

PROBLEM:
on the 2 meter side is a shack located RFC 2-317 (right beside the 4-310)......It blocks the 12v on feed thru.
The radio is putting out the 12v when pre-amp button is pushed on both 70cm and 2 mtrs.
12v goes thru the 70cm amp, but is blocked on the 2 meter amp...
I do not want to take both apart, to check....
Does anyone know what is wrong, specifically?
Thanks in advance.
John

These are certainly very common 1-amp power diodes; try the 1N540x
series for 3-amp diodes.

Excellent condition TH-G71A, still on warranty. Comes with a SMC-33 microphone, PG-3J filtered cigarette lighter adapter, PB-39 high power battery and BC-17 charger. Includes manual, warranty card and original bill of sale, also original boxes. AES sells this bundle for $382.85 plus taxes.

I will let you have it for $300. U.S. including shipping and insurance. Reason for sale is that I need a mobile rig. Inquire by email if interested.

Hi there,

Some of my friends are interested in buying an FT100, but
I'm not sure if I can recommend such a small rig? My
main concern is the large signal behaviour, especially
in the military 30-70 MHz frequency range (RX).
Does anybody have any experience with this? Please report.

Greetings,
JY1

The 1N4001 rated at 1 kV (I think), 1 A seems to work fine in place of all the rectifiers I've come across.

NOT always OK for thermionic diodes, because they provide built-in surge prevention. Just add a suitable series resistance, say 100 ohm 5 watt to experiment with.

NOT suitable for replacing signal diodes, either.

The TM-V7A is an exceptionally good rig. I have owned mine now for about 7 months and have had no problems what so ever with itwether mobile or here in the shack. The rig seems to have a very durable, sturdy cabinet. The only draw back I find is in the owners manual... it's too thick!!! (meaning there are plenty of options on the rig) Seriously though, kudos to Kenwood, A-1 job!!!

>can the Yaesu FT-847 operate submerged or after a ten foot fall onto gravel?

Sure no problem. Whenever I want to operate out in the pool,
I just throw the rig out the 2nd story window onto the driveway
(so I don't have to carry it downstairs) - doesn't everyone?
and if I get too hot by the pool, I just take the rig in with
me. This is all made possible by chip components
(rugged - glued down to PCBs) and the trend away from
moving parts in rigs today.

Don't forget your sunscreen !

From my FAQ article BUYING A USED SCANNER RADIO:

[...]

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.

I am debating replacing my 730 with a new radio. I have the companion
ICOM ps-15 power supply.
I need some opinions re these two. My principal interest is HF so the
6m and 2m bands are not important here.
I'd like to hear from real users of either of these two.

Things like antenna tuners, ease of use, optional equipment needs,
functionality of the front panels, PRICE are important.

Thanks, Ted HF5HV

I've noticed problems with mine while attempting to operate it submerged below a depth of 400 feet. Also, while a ten foot fall onto gravel is no sweat for the unit, the one time I dropped it from my Cessna 150 at 5000 feet into a tar pit the receive frequency jumped 5 Hz. I complained to Yaesu, of course, but got no satisfaction. The nerve of those guys. You might want to look at an old ARC-5.

Dan,

Yes, mine does the same. But as I wrote, I'd like to get it up to around 160 or

so if possible to listen to other things when I travel. The IC-28 expands up to

about 174Mhz. I'd like to do the same if possible.
It doesn't even have to transmit up there, I just want to listen.

I have one of these radios and am very happy with it. It's easy to use. The entire keypad can light up and the display is easy to read, so it can double as a mobile radio very nicely. That's what I did. I use it in my car attached to a Maha docking amp. My only regret is that I didn't get the programming software when I bought the radio. 200 memories is a lot to keep track of.

If you plan to use the crossband repeat feature, don't run both bands at high power. The radio will get REAL hot. If I'm crossbanding from 440 to 2M I only have the 2M side on high if I need to, and the radio still gets extremely warm.

3293. Programming software for Ken. TM-V7A?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-07 00:00:00 UTC
From: not.shown@to.prevent.spam
Message-ID: <36e308a0.7136762@cnn.exu.ericsson.se>
Source record: 114750

I just bought a Kenwood TM-V7A and went to their FTP site to
D/L the programming software. It accepts anonymous access to
everything except when I click on the software I need. It
than prompts for a username and password. CRAP.

I want to get this thing programmed quickly (without having
to use the front panel) and installed in my car this weekend.
That's why I bought it.

Anyone have this software or the login info to get it?

Anyone know the reason why Kenwood keeps this under lock
and key when they say right on their web page that it's
available?

Thanks,
Mike (KD6PKJ)

Source record: 114756

I've had the same problem with one, particularly when the car was hot.
Traced it down to a soft piece of foam inside the mic that is used to push a
"micro-switch". I added (glued) a washer below the piece of foam rubber to
make up for the permanant compression of the foam and the problem is gone.
Good luck!

You know Ken, unwarranted slander like this is ruining the net. You could have posted a message on the swap group to my attention and I would have answered. Yes I did change internet providers.... and as a result have a new e-mail address. Yes I was going to buy the SB-104A, but decided not to at this time. I did send you e-mail, I gather you did not get it. I have had a number postings here with my new e-mail address, if you were so concerned, why did you not reply to one of my postings to ask me about the deal? If everybody up here whined the way you are everytime somebody changed their mind, there would be not room for for-sale messages. That's why, you don't ship til you get the cash. Why would you even post this drivel when you lost nothing? I dunno Ken, seems like you are crying about nothing... give the world a break will ya...

Hello,
thanks for reading this. Has anyone had experience of the Watson W-2000
tribander?
Particularly any tuning requred to the long radial to give low SWR across
the 6m band
Any advice welcome.
Many thanks

I have one of these radios and I like it a lot. However, because of the wide front end, it tends to get swamped due to cell phones and pagers if you are in the vicinity of one of the towers. I have resolved this with an amp with a built in filter. I know of others who have purchased a notch filter to remove the troublesome signals. I agree with the other person who responded if you can get the software and the cable up front. The programming is much easier on the PC.

Wondering if anyone owns a Yaesu FT-3000M. I am looking to buy one, and I was wondering what everyone thought about it. Also, is there a mod for expanded transmit in the 150-156 mhz range? I am a firefighter/emt, and I would love to have the radio to use for that as well. Please e-mail me if you have information!

3317. Kenwood 2m and DSP 232 problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-07 00:00:00 UTC
From: art.santella@juno.com
Message-ID: <36e1e18d.176095@news.snet.net>
Source record: 114774

I have a AEA/TimeWave DSP 232 all mode controller. I have the intermittent problem of the Kenwood 231A locking into the transmit mode when on a packet cluster. It has only happened twice but the rig almost overheated. I shut off the 232 and it comes out of transmit and then operates fine for days. I was told it might be a ground loop. Has anyone ever had any problem like this.

I am looking to buy a Kenwood TM-V7A mobile and wanted to get feedback from current owners. The discouraging thing is paying $99 for the remote face mounting cables. Also what does the VS-3 do for the unit? I have a TH-79A-HP and would like to use the mobile to cross-band.

Dan,
If this is a local repeater (within 5-10 miles away) you should be able to get into it without a problem with the rubber duck or your MFJ 1/4 wave. What I would suggest to you would be to build or buy a 5/8 wave 2 meter antenna. This kind of antenna is physivally and electrically longer for 2 meters, and directs more radiated power towards the horizon. This antenna should greatly improve your ability to acces repeater DFQ. One idea would be to buy a Larsen NMO-150B and then build a 1/4 wave radial system (or drill it through a cookie sheet) and hide it in a closet.

3321. Re: A Generic diode ???

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-07 00:00:00 UTC
From: Rocci <rocci@worldnet.att.net>
Message-ID: <36E1F770.3B655DB6@worldnet.att.net>
Source record: 114778
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

There are 3 kinds of diodes you're likely to find in you Heathkit:
1) Rectifier diodes
2) Silicon small signal diodes
3) Germanium small signal diodes.
For most power supply and rectifier applifations, the 1n400x series are a good generic substitute, as long as you observe the breakdown voltage ratings. For most common small signal applications (detectors, low level switching, etc), the 1n4148 silicon diode is a good choice. For some low level RF detectors, it was common to use a germanium diode such as a 1n34. If the detector was designed for a germanium diode and you sub a silicon diode, you might find that the sensitivity is not as good.

Sounds a lot like a CB. :) Some guy keys up calling "how 'bout dat DX
land" and then can't hear 70% of the people getting back to him with
25 watts (twice the legal cb limit). It's almost funny to listen to.

Yaesu has no idea what to do. they sent me a letter saying that they were
waiting for info from yaesu HQ. I guess the phones don't work at Yaesu HQ.
Yeasu should be ashamed for making the VX-5R
I guess they said lets make a pice of crap,, so we got the VX-5

\\ Just what I think

3329. Question on Yaesu 8500.

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-07 00:00:00 UTC
From: seebody@toreply.com
Message-ID: <36e22d2a.62860594@news.ncal.verio.com>
Source record: 114786

I recently picked up a Yaesu 8500. REAL nice radio. Question thou: I'm using quite abit of it as a scanner to monitor the local police / fire. One bank though, would be nice if it would only scan if I were in that bank. For exampe, bank 4 is San Jose Police. Busy police department, 8 channels. If I'm in bank 4 and I hit scan (for less than .5 seconds), I'd like it to scan bank 4. But, if I'm in bank 1 and hold down scan, I'd like it to ignore bank 4.

Any suggestions?

Thanks!

Evan

I guess it depends upon what you consider a steal. If you have access
to electronic swap meets and are willing to look, maybe for a year or
so, you will find one much cheaper, more like $50. I know; I bought
one, and have seen others for sale. It would be like me offering my
SW-3 for $1000. It a rare item in much more demand, but I probably
would get some snappy responses. I agree much more on your opinion.
It's a really nice GDO.

According to the manual the antenna extender element is for use when receiving below 50 MHz but I've found it's needed when your trying to work 6 meters. Anyone else have this same experience? Also, wonder how much that would effect 2 and 440 operation?

Given what coverage you say you currently have, I'd say your improvement (and
although there will be improvement) will be minuscule.

From an overall standpoint, you will probably not notice the
difference. The rule of thumb is, "double the antenna height (above
average terrain) = quadruple the power". This would come out roughly to
one additional "S" unit on a calibrated "S" meter.

The thing to keep in mind though at the frequencies you mentioned
(especially UHF), moving an antenna 6" could move your signal into a
null, or out of a null. Its entirely possible you could move your
antenna where it is shadowed from where it was before. Or, you could
move it where you can access new repeaters. Works both ways.

We Hams don't always modify our radios to transmit illegally. Perhaps I am a member of a volunteer emergency service who uses vhf and uhf frequencies for radio communications. Seems silly to have 2 ht's and 2 mobiles if you can use 1 ht and 1 mobile. Also, reprogramming commercial is expensive, tuning an amateur is painless...

Source record: 114797

Yep, thats all true but.....
Im Stationed here in Japan, and have a friend that has a FT-847.
The problem is that the Radio has Japanese Band Plan specs. You will be cut severely on 2 meters (no repeaters here in Japan) and 440. Also you will miss out on the HF bands 160, 75, 40.
I have found the mod for extended receive but not transmit...The CPU that goes in the Japanese model is not the same as the US one, so the American mods do not work. So you might want to think it over before you go out and spend all that money. Oh the Japanese Base Station Radios do not come with MIC's...something else you need to get.

If the extra 5 feet is enough, line-of-sight-wise, just to
clear a very nearby obstruction it would make a lot of
difference in that direction.

As it is only 5 feet above the ground, even without any
obstructions, a gain of 3 to 6 dB could be expected at very
low angles. It depends on type of ground and how much
low-angle power is lost in it at present.

Want cosmetically good, but broken Kenwood TL-922A for station.
Must have all internal parts, less tubes.
Price accordingly.
Thanks.

This was just posted on the FT100 reflector:

Here is the response I receive from Yaesu when I asked why
the ship date is now late March. 73, Dan AA9NK

Dan,
Thank you once again for your inquiry as to when we are
finally going to
release the FT100. I understand how frustrating it is. You
should walk a
mile in my shoes!!!! We have been told the radios are now
ready and we are simply waiting on them to be shipped to us.
I do not feel it will be late
March, but I can not promise you it won't be. There was no
"serious
technical issue" only a few minor issues that had to be
resolved. And now those have been taken care of. Please
allow us a little more time and we will deliver the radio as
soon as possible. We truly appreciate your comments and
patience.

Best regards,
Neil Sims N5OC
Regional Sales Manager
Yaesu USA

Your short answer is yes. This is a distance to "line of sight" problem to compensate for the curvature of the earth. As you probably know, VHF/UHF signals travel as far as they can see in a straight line similar to light beam (at least in theory). The following formula does not take into account for topographically challenged (hilly) areas or locations than contain obstructions. Ok, here we go:

Distance = 1.4 x the square root of the height difference (the amount you raised your antenna),

If the difference in antenna height is 5 feet,

The square root of 5 feet is 2.24,

2.24 x the multiplier of 1.4 = 3.13,

So, raising your antenna 5 feet will give you approximately 3.1 miles of additional "Line of Sight".

3.1 miles is a pretty substantial amount considering it might make the difference between keying up a repeater or not key up the repeater.

I hope this helps,

73's

Paul

3351. Problem with Kenwood 830 - HELP!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-07 00:00:00 UTC
From: compcnsult@aol.com
Message-ID: <19990307103711.09856.00004027@ng-ce1.aol.com>
Source record: 114808

I purchased this rig used and listened to it off and on over a two day period (receive only) and it worked just fine. I was showing my son-n-law my new prize and listening on 40 meters just before going to bed last night. When I got up this morning I turned the rig on. The meter lights up normally but there is no display and all of the LED's (vfo, rit, etc) are very dim. Also no receiver noise is heard. I checked all of the switch settings but like I said the rig worked great all day yesterday and up until the time I went to bed. Looks like a power supply is being loaded down or just not putting out the correct voltage. I don't have a service manual.

Has anyone ever experienced this problem with the 830 before. If so I would greatly appreciate your help?

Please respond to this address or wd0asj@aol.com

73 & Thanks
Chuck

Unfortunately, you need a terrain modeling program if you expect
to get accurate answers. VHF/UHF radio waves don't travel well
through the Earth, nor do they travel in a simple manner through
urban clutter. On simple line of sight paths, signal strength falls
off in inverse proportion to the square of the distance, but there
are few simple line of sight paths in your scenarios. The signal
will arrive by multipath reflections, knife edge defraction, and by
forward or back scatter. These will all interact in complex ways
at different points in your coverage area to produce a very wide
range of signal levels at the receiver.

The line of sight range of a 5 watt HT is easily several hundred
miles (example, you can work AO27 with a HT), but on terrestrial
paths, depending on the specific terrain, it can vary from well
under a mile to perhaps 60 miles if the stations have a particularly
favorable path. I'm discounting ducting phenomena here, under
the proper ducting conditions, a HT may work over a several
hundred mile path. But that's a transient phenomena and can't
be counted on day to day.

The V7 is an excellent radio. The blue face is both distinctive and easily read, but does tend to wash out in direct sunlight. Also, you cannot wear Blueblocker-type sunglasses! The radio performs up to the usual superior Kenwood standards. I use mine an average of 6 hours per day and it runs like a swiss watch. Get the cheapest remote face unit and make your own cable for the microphone, using cat-5 cable of the length you need and a female-female RJ45 adaptor; that'll cost around $10, plus the $35-40 for the face kit, so you save around $50 over the price you mention. Just be sure either the cable or the adaptor reverse the pins so you stay aligned properly. If you need more wire between the remote face and the body of the radio, simply cut the cable and splice in what you need - it's only 4-conductor wire and any wire will do. I used 6- conductor phone wire and used the extra 2 for the remote speaker. Works great, and threading the phone wire before soldering made it easier/faster than trying to thread it with those plastic connectors attached. 73 Gerry KB0VOF

I have not seen any low cost programs doing any usable predictions in
such environments.

As for the rule-of-tumb, the signal strength seems to be inversely
proportional to the fourth power of distance in urban areas (while the
free space loss is only inversely proportional to the square of the
distance), due to various scattering modes between and around
buildings.

I have one of the early VX-5R tri-banders. It's a great radio and seems to work fine other than the notorious PL scan decode problem I'm wondering if I should send it back to Yeasu for the fix. I don't know if I will ever use that feature. Of those of you who have early models and sent them back to Yeasu, are you satisfied with the fix of the PL scan problem? Thanks for your input. The Orlando Hamfest special was $329. The dealers were all complaining that the price was too low for them to make any money, especially if they took a credit card. The price at Dayton should be the same.
Dealer cost on the radio seems to be about $315-$319.

The Mars/Cap mod you can do yourself, it's in the owners manual. Can't imagine anyone wanting to open up the rx on this rig. The cross modulation is bad enough the way it comes from the factory. I've got 1 and my buddy has 2. Good rigs if you don't live in a high rf area.

Even outdoors in a suburban residential area (not real dense
condos, but single family homes on decent sized lots) the factor
can easily be an inverse 3rd or 4th power function of distance.

Gary is right ... to get accurate results you need some
pretty sophisticated software as well as accurate terrain
databases with indications of building density, etc.

Thanks for reading. I am in need of specs and a schematic for a Galaxy VFO, the one that works with a Galaxy III or V. What I want to do is use it with a Heath DX60B if it has the right output frequency range, and uses similar voltages to the Heath VFO. Anyone use this combo together, and can advise me what to do to connect them together? Any help will be greatly appreciated.

I have a Radio Shack HTX-204 which is their version of the AT-600. The manual states 10 hours to fully charge the battery. That's for the 7.2V battery pack. If you have the 12V high power battery, I can't say. Have you tried e-mailing ADI or checking their web site? I've found they're pretty responsive.

Hello--

While the ECG replacement you mentioned may carry a 600-volt rating,
the 1N4001 is speced at 50 volts PIV.

Back in the early days of silicon rectifier diode production, low
yields of high-voltage diodes probably made it economical to sell
the low-voltage diodes (1N4001s and 1N4002s) at lower cost.

Source record: 114634

Had one for almost 2 years in the vehicle my wife (N7WNW) mostly uses. My only complaint is the display - washes out in moderately strong light and the surface is so shiny that it reflects any bright window. Makes for some dicy operations mobile. The display on my 742 isn't as shiny and doesn't fade as quickly in bright light (something we know a little about here in Arizona)!

Unlike other small Kenwoods (now discontinued) the V7A doesn't suffer from intermod at the drop of a hat. I had a 732 (I believe it was) and drove from Phoenix to Las Vegas to Salt Lake City to Farmington (NM) to Phoenix. The only place where I DIDN'T have intermod (after Kenwood Service tweaked it to try to stifle my complaints) was in between mountain ranges in eastern Utah. The 742 I replaced it with is MUCH better - the V7A is almost as good as the 742 and much smaller!

> --- Brian, W4OLF
>
Actually, the 1N4001 has a PRV of 50volts. I just checked, and the ECG
replacement guide uses 1 diode as a subsitute for the lower half of the
1N400X sereis, and then a different diode for the upper half. They are
substituting a higher PRV diode for the low numbered ones.

But your point is good. The 1N400X sereis are all 1amp diodes, but
as the final number goes up, the PRV goes up.

Pretty darned nice mobile 10 meter radio. Some small abrasions,from normal viewing distance,would be hard to see. Mike,power cord and I have a photo copy of the owners manual,somewhere! NO mobile bracket. I haven't transmitted on the air with it but have run it into a dummy load and it works. Also, the receiver seems to be pretty "hot". Make reasonable offer,send Postal M.O. and it's yours. Leon Snider KE4GG Pinson,AL

From: Rob Kling <rkling@home.com>
Message-ID: <36E4272D.EBF9FA33@home.com>
Source record: 114646

Is it "real time"? I know that you can listen while the scope is running
but I thought it was more like a sweep. Of course, if it sweeps fast
enough then it is as good as "real time":) I bought the 746 because it
swept fast enough for me and I generally do not want to listen and
search for another frequency at the same time. And at that time, the 746
and the 756 were almost the same price. Now you can get a 200 dollar
coupon for the 746. There are some operating features of the 746 that
bug me, one is the fact that the twin pass band tuning display is paired
with the scope. If you wanted to see PBT display you would have to turn
off your scope. I do not think this is true for the 756.

Michael Madden wrote:
>
> The receiver's are basically the same. Both Great! The major difference's

I have a VL-1000 and have had it for a year. Yaesu will fax the instructions to "open it up" on 10/12 when you fax a copy of your lic. Its a great amp! Once opened up, it will put a Kilowatt everywhere from 160 to 6 meters! The specs say only 500 watts on 6 but I can atttest that it is the fill 1KW!!! I had a FL-7000 prior to and the VL-1000 is much less fussy about SWR.

3408. Programming software DR-140T ?????

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-08 00:00:00 UTC
From: Leo Bosard <lbosard@prairie.lakes.com>
Message-ID: <36e42b9e.0@news2.uswest.net>
Source record: 114649

For the past two years ALINCO has claimed on thier web page to have programming software and cable "coming soon". Well of course it seems they don't plan to live up to the promise they've made to those of us who bought the radio.

I'm wondering if anyone out there has had any luck developing a program of thier own or using a program for a different radio to program the DR-140.

I'm also wondering if this lack of fullfillment of advertised gimicks to get people to buy this radio has happened on other products of thiers, or was it unique to the DR-140. I'm happy with the radio, just not with the company!

3409. Motorola Speaker/Mic

Source record: 114650

I have a Motorola speaker/microphone with a part number of NMN6156B. I'm not sure which Motorola HT it fits, it has a funny looking connector with 6 brass connectors on it. It would make a great speaker/microphone for a amateur HT, since it's extremely rugged seeing as how it's a commercial product. If anyone is interested in buying it, just make me an offer. No reasonable offer will be refused. If you don't want to buy it, but know which HT it fits, I would welcome that info!

I have the following 2 scanners for sale

1 - Uniden Bearcat SC150 800MHz scanner, twin turbo, used but in good shape. 100

channels, no modifications done. Unit has a date code of 'OFIG' first $105
takes it

1 - RS Pro-2039 Base scanner. Very small and in great shape. 200 channel, 800MHz

HYPERSCAN. Broken screw in top mount antenna , but functions fine and has
optional BNC antenna connector on back. Unit is 120VAC ready with cord. Asking
$125 obo

I have a number of mint condition Black & White CCD cameras. Follow the below
link toview . They are very small encased C-mount cameras(I have some lenses for
sale as well) They were purchased new for $249 each. I
will sell for $150 each, or can work out a deal for qty. Let me know if
interested

In case you don't have a manual (which is probably why you are asking); press and hold D/MR while turning on the rig. The display will show the ratio of VHF/UHF banks. move the joystick up or down to change the ratio. Press MNU to save the changes. Your previously saved channel data will be lost, though.

I have the following tubes that I would like to get rid of. They are
all thyristors, most are untested because of high voltage applications:

1 Knuth 3C45
3 Westinghouse WL678
1 Electronic Inc C6J
1 Sylvania 6D4 NIB
1 RCA 2050
1 GE 2D21 NIB
7 various 2D21 tested, OK

Will consider interesting trades or reasonable offer. Thanks, Harvey

This is just another humdrum ham radio, that works no better that a FT101, shure its small. But like the ic706 mk1 to 99, its third order imd is poor, the splatter that comes from these boxes is on par with most CB radios. The receivers are ver poor, low 3rd order interecept point. No ham should use these radios on the ham bands with a linear at a fixed station. Mobile and portable and emergency use are okay.

But why these ham manufacturers try to put 3 grains of rice into straw, when most of their products have poor receivers and and poor transmit IMD, i dont undstand. At the rate at which most manufacturers are improving receivers, ham radio might be a dead hobby.

But buy the FT100 and tell us all about how well it works for you, and how brilliant those 500 sub menus are, you better be the first to write a cheat sheet, you might make some money!

Good Luck

Please look at the specs, and try to understand what each one means.

3433. Mitrek question...

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-08 00:00:00 UTC
From: nw2m@qsl.net
Message-ID: <7bv4shqkg1@nnrp1.dejanews.com>
Source record: 114678
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

Greetings,

I have a pair of Mitrek units, one for receiving 2 meters and the other transmitting on 440. This will be replacement hardware for our 2 meter remote site which was a single GE unit. These are new to me and were configured by a shop in Canada. Both units are in great shape.

The Mitrek receiver model is MX24JJA1906-BBW.

On the Audio-Logic board (which is mounted foil side up), there are several pots. What is the function of:

MOB RT
RT MOB
RT RT
MOB SQ
RT SQ

The RT SQ is the receiver squelch, I have adjusted that. Others are deviation(?), etc. Which one controls the audio from the receiver which feeds the transmitter? Or, is this adjustment on the transmit Mitrek unit? The reason for this is that all of the remote reveivers must transpond the same audio levels to our main site for voting. Mitreks are new to me... but not for long. I need to control the audio from the receiver to the transmitter for leveling.

Many thanks,

Al, NW2M

March 7, 1999

Dear SWL's & Hams,

Many thanks to all who responded to my inquiry for a FRG-7 manual and schm.charts.

The number of replies was great and I've tried to respond to all. I'm all set now.

So for you folks looking for copies, take heart ... there are lots of copies and even a rare original or two kicking about!!

Now, I'm off to enjoy my "new" unit and listen to the world and relax with a hot cup of my favorite!!

Best,
Charles

I recently sold a spare Icom UT-89 tone board and the gentleman who bought it could not get it to work in his 2350. I tried to turn on the T_squelch in my 2340 and also found that will not work. Does anyone know if there is a secret to getting these to work. We tried the instructions in the manual but no help. These is two separate tone boards so I can't believe they are both bad.

I have a working prompro 8x programmer that I am trying to find either
a M010 module or schematic (even a hand drawn one is great) for.

The M010 does the 27C010 or 27C1001 eproms.

I have the manuals and schematics books for this one here, but this
module isnt shown in them. It only tells how to use the module.

Also if you have a remote keypad for one of these, I'd be interested.

3456. FT 50 Replacement Antenna?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-08 00:00:00 UTC
From: msdbm@aol.com
Message-ID: <19990308011317.07559.00005034@ng-fa1.aol.com>
Source record: 114701

Does anyone have a recommendation for a replacement dual band antenna that has an SMA connector and is proportional to the size of the radio (4" or so) and actually works?

I have tried the DIAMOND srh805 and it barely receives.

I have a friend looking to buy a 8500 (he's moving in 2 weeks and driving x country so wants something to pass the time).He needs a 8500 and wants to be able to put it on a credit card. Please contact me at my below address, so I can pass the info on to him.

Thanks.

Evan

> I have tried the DIAMOND srh805 and it barely receives.

I have a Diamond and also had the same problem. I discovered that the pin in the antenna's connector was not making good contact with the SMA connector on the radio. To solve the problem, I took the antenna and used a file to file away between 1/32" to 1/16" of the bottom of the antenna's connector. By doing this it allowed the cinter pin of the antenna to mate with the SMA connector on the FT50. The antenna now works like a charm and seems to do a bit better than the stock antenna.

Thanks,

I think there is something wrong with their FTP server. When I
did as you suggested, I got the readme file OK (I couldn't before),
but still the EXE wanted a username and password. I tried about
4 more times and it finally let me start a D/L. Weird.

Anyway, I now have it. Thanks again for your help.
73's,
Mike (KD6PKJ)

Hi ALHUSSEIN BIN TALAL,

Long time no hearing,

I use the FT-100 myself and I find it a great rig.
It transmits perfectly in the military band (just for teasing of course) and
even on 3 meters FM I can do some jamming on car-radio's.
The most spectacular band is the air-band. When I'm bored I do the most talks
there, because there's always a listening ear available.

By the way, when are you going to visit me as planned ?

regards

Klaas Pa0KLS, The Netherlands

3470. Do you have a radio to sell?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-08 00:00:00 UTC
From: Scott <diverscott@my-dejanews.com>
Message-ID: <7c0ln4$1s5$1@nnrp1.dejanews.com>
Source record: 114715

I noticed a trend on this newsgroup: It's not very novice friendly.
What I mean by this is that most messages look something like "Kenwood X1456 G -$1000."
As a beginner I find this frustrating that I have no idea what is being sold. You may be selling exactly what I am looking for but I will never know. Sure I could research hundreds of ancient model numbers but why should I?

I am currently looking for an all mode HF+6 transciever. I have had many responses (I feel this is a bad sign) from people that want to sell me a Kenwood TS 690SAT for around $1000 or more. This is a little more than I wanted to spend on a used radio that is probably no longer supported by Kenwood (Hey, I'm new but I know about Kenwood) when I can get a NEW HF+6+2 for around $1000.

Scott

shipping was to the USA from Japan.
You can also order from the Hong Kong Dealer also (Enlish spreaking). Use your Mastercard to pay and you get the Best Exchange rate and you get the protection if the item is not sent etc. I had a bad experience with a CB place selling some Ham stuff within the USA. He sent a Opened used radio and Said "TOO BAD". I called my Chase Manhatten PLATINUM Mastercard . told them the story . He never got his $ I have the radio my shack, I am NOT paying interest on the amount on my statement. The guys says he will refuse my package if I attempt to return so I won't. This has gone on for 2 months and I think he will give up soon and I will have the radio for free !!! Uniden Lincoln 10 mter.
Used a bit . H AH AH. By the way> he called me last andtried to take less for the used radio. I said "TOO BAD". Send me a new one and then I will sent the used one COD and pay for the radio minus the phone charges to him.
He laughted so I guess I got a free slightly used radio.

3477. ADMS Programming Cable

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-08 00:00:00 UTC
From: Dave <belcom@excite.com>
Message-ID: <7c0n0f$99i$1@Ouimet.tbaytel.net>
Source record: 114722

I recently purchase (used) a ADMS-1B programming cable to use with my FT-50R.
The problem is that I constantly get CERR on the display. I do have the proper software for the FT-50 and can get it to work with a homemade programming cable.
The question is, is there a physical difference in the cable made by RT systems between the ADMS-1B and ADMS-1C or D?

Thanks...Dave VE3UY

Jeff,
This sounds like it would fit any Motorola Jedi radio
(MT-1000/HT-600/P-200). If it has a plastic hook on the end of the
connector, then this is probably it. That hook goes around the antenna to
secure the connection.

The PBT still works when using the band sweep feature, you just don't
see the graphical display. Why care? You can tell how the PBT tuning is
set just by looking at the control.

I have TWO Austin Antenna 2M/220/440 triplexers with N connectors on all ports. I also have ONE Comet 6M/10M duplexer with UHF connectors (PL-259/SO-239). They are all working and in excellent condition. I would like to sell them as a package for $100. If you would like them, please send me an email. Thanks very much for your interest!

3487. SALE: 433 MHz. 9600 Baud Packet Station

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-09 00:00:00 UTC
From: bgwatson@earthlink.net
Message-ID: <36e57dea.148152013@news.earthlink.net>
Source record: 114540
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

I have the following equipment for sale:

Motorola Maxar 80 UHF radio
MFJ 1270B TNC
Paccom 9600 baud modem installed

The radio is crystalled and tuned for 433.15 MHz, and puts out
approximately 15 watts. The equipment was taken out of service
working, a part of the network here in northern CA.

Power cables for the radio and TNC are included. A manual for the TNC
is also included.

I am asking $150, but I am open to other offers.

Thanks for reading this message, and please send me an email if you're
interested.

That's exactly it Paul. I got it at a hamfest for a fellow deputy. For some reason I thought it would fit his STX, but it didn't <grin>. I carry a GTX, which is a nifty Motorola HT, but our department still has a lot of STX's in use and many deputies don't have a shoulder speaker/mike.

Does anyone want to trade the speaker mike that I have for one that will fit a STX? It will go to a good home!

For Sale. Omni VI+ with matching power supply and loaded with filters. Has the T-T approved transverter mod installed. I can leave this in or remove it. The only addition is one additional RCA socket on rear panel for low level TX to the transverter. Radio is perfect and comes with the matching power supply, boxes, docs. This is an original + not a factory update. $2100 firm + shipping/insurance.

DeShawn,

1.) Press the 6(RP)ONT button long enough for the display to show the
operate RX/TX time.
2.) Press the F/W key long enough for the flashing number (the next memory
channel) to show. Approx. 1 sec. Pressing for too short of a time
will take you to the repeater split screen when pressing the
6(RP)ONT button.
3.) Then before this screen times out and goes back to the operate TX/RX
time, press the 6(RP)ONT button briefly.
4.) The time will now show R00:00T00:00 as desired.

Larry Benko, AC0B

Cecil Moore <cecil_a_moore@ccm.ch.intel.com> verbositized:
>Hi Roy, in my 15th edition of the ARRL Antenna Book, Fig 33 on page 2-35
>shows the radiation patterns for 90 degree (1/4WL) and 180 degree (1/2WL)
>verticals over perfect ground. The graph shows the 1/4WL has more high
>angle radiation than the 1/2WL. Is this what the argument is about?
Just because it's in an ARRL publication don't make it right!
In fact, I have several ARRL books here that have grave mathematicalerrors.
One of their books that SHOULD NOT have any errors is their
"Understanding BASIC Electronics", yet it is inundated with serious
unforgivable errors. Eg. Page 2-9 Fig. 1, Page 2-9 Fig. 2, Page 12-8
Fig. 4, Page 13-1 Fig. 1 This one is really bad, if I=E/R how on earth
did they come up with their answer. Continuing, Page 13-10 Equ. 4,
Page 14-5 Fig. 2 Equ. 5, Page 23-23 Equ. 2, Page 26-10 they show 120
times 2.8 to equal 327.6
If they can't even get simple BASIC Electronics down pat, how can you
possibly believe them on something more complicated?
Another reason why I am NOT a member of the ARRL!!!!!TTULGary

Hi to all.

As I'm planning my first trip in the USA (wow! can't still believe it)
in May/June, I'll try to find some time to spend (and maybe not only
time!!)
for the hobby.

I'll be in Salt Lake City, Utah, so I wonder if someone would send me
anything of interesting a ham radio can see and do in that city.

As I'm here, does anyone know if I can bring with me and use my
HT in the USA? It's a TH79 european version and it's wide band open
(cellular band also but, hey, they sell it already modified).

I don't want break any law!!

Thanks in advance.

From: "Wayne K. Irwin, W1KI" <w1ki@arrl.org>
Message-ID: <36E521B2.C1E4CA1@arrl.org>
Source record: 114554

A few weeks ago - maybe it was just a couple - I saw a post regarding the ICOM IC-706MK2 noise blanker. Specifically, the post said to disable the noise blanker feature in the AM mode. After doing that, the internal noise blanker adjustment could be increased to improve the NB action on SSB. I believe the internal adjustment was a small pot and this is where the problem lies; I don't remember which pot or where it is located. Does anyone have a copy of that message they can forward to me ? I lost my printout copy and don't remember where I originally saw the post.

Thanks in advance...

Lets you see if there are other signals on the air below and above
the frequency you are tuned to. the little " spot " that travels
across the bottom of the screen is the frequency scan marker and each
pixel represents the tuning step you have on the left side of the
sweep. So if you have it set for 5 kHz each little pixel is 5 kHz
wide.

Paolo,

Do you like to ski? There's more skiing within 20minutes of Salt Lake City
than you've ever seen before.

I highly recommend that you visit Temple Square, and the church history
museum. There's a wealth of information about Utah's early settlers and the
LDS church.

Visit the Capital Building, and if it's open...visit Kennecott Utah Copper's
Bingham Canyon mine. There you'll find the world's largest open pit copper
mine. It's nearly 2.5 miles across!

And last but not least, we do have but one little ham shop.
www.comm-pute.com

I'd sudjest that you tune to 146.620 - w/ a negative offset to get local
information. You can contact me on 447.900 - pl off 114.8

Enjoy your visit!

73 Dan / N7WPD

3504. Re: Galaxy VFO Schematic needed

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-09 00:00:00 UTC
From: k5dh@rtis.ray.com
Message-ID: <7c3b0p$of5@news.rsc.raytheon.com>
Source record: 114557
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

As I recall, having recently sold my Galaxy V, the VFO runs in the
5.0 - 5.5 MHz range. That means it would have to be modified to
either 3.5 - 4.0 MHz or 7.0 - 7.5 MHz to work with a DX-60. Not
a real good idea, unless you're experienced at building VFO's.
I'd offer it up for sale (it shouldn't take long to sell a rare
item like that!) then buy a Heath HG-10B VFO (designed to work
with the DX-60 series transmitters).

73,
Dean / K5DH

I have a Lambda model LXS-E-15R regulated power supply. It's rated
19A continuous, 15V +/- 5%. Turned all the way down, it puts out
14.0 V and is perfect for powering Amateur gear (ie, 13.8V requirements) which
is what I've used it for. It also has remote sense terminals so that it
can regulate the voltage at the load, not at the source like most supples.
No fan -- LARGE heat sink for totally convective cooling. Also no on/off
switch; just plug it in and forget about it (which is exactly how I've been
using it for over a year).

Only reason I'm selling it is because I need a more portable unit, like a
light weight Astron switching supply.

$90 + shipping from Monmouth County NJ, or will consider trade.

3509. FORSALE - MINT Kenwood TS-520S w/CW filter, mic, MFJ tuner

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-09 00:00:00 UTC
From: jpl@hoserve.ho.lucent.com
Message-ID: <7c3h6e$gju@nntpa.cb.lucent.com>
Source record: 114562
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,nj.forsale,rec.radio.amateur.boatanchors

I have a mint Kenwood TS-520S that I would like to sell.
In my opinion, the 520 and 520S are
some of the best rigs around and would make a
fantastic beginner station or a great backup rig.

For any novices not familiar with this radio, it is all solid state
(discrete components, so its very easy to repair if ever needed)
except for a tube driver and a pair of very
robust 6146 tubes as the finals. It has a builit in power supply,
but can also run off of 12VDC with an optional DS-1A
DC-DC convertor (not included). It also has connections for the
Kenwood DG-5 digital display.
It covers 160,80,40,20,15, and 10 meters in CW and SSB (upper and lower) modes.
The receiver section is excellent and I always get excellent audio quality
reports. Many folks say that these older Kenwoods are some of the best
sounding rigs on the air.

This rig also has the optional 500Hz CW filter
installed (genuine Kenwood option). Also included
is the Kenwood hand mic.

The price is $300 firm + shipping. You might find one for a few $ less,
but NOT is this great condition.

I have a IC-W3a also I really like it but the yaesue FT-50rd in my opinion is a better radio. It has most of the same functions and capabilities but it has a better a wide band receiver with W-FM N-FM and AM receive, you can receive TV stations and whatever else all the way up to 1 gig I think (maybe higher)

Yes Paolo, there is, or was. He advertises in QST. I think it is called COMPUTE, or something like that. I live 250 miles away in Idaho. Never been there, but I did order a rig from him about 5 years ago. Look in QST he is usually there. There is a large ham population in SLC also. Don't forget to see the LDS Temple grounds and visitors center.

3512. Belt clip for VX-5R

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-09 00:00:00 UTC
From: Vito Villamor <vovillamor@yahoo.com>
Message-ID: <36E54E1E.70B136F8@yahoo.com>
Source record: 114565

TO: Yaesu VX-5R Mailing List at OneList
CC: rec.radio.amateur.equipment newsgroup
yaesu@postoffice.worldnet.att.net

Hi All,

I'm a long time subscriber, and a new VX-5 owner. Following this list better prepared me for finally owning this radio. Thanks to all.

The first thing I did with my radio was the software mod with EVE software. It worked the very first time. This is in direct contrast to the difficulties I had in software modifying my VX-1. And I my FT-50, I couldn't even get the software mods to work, so I ended up hardware-modifying the FT-50. Thanks for the great EVE software. You don't think that RT Systems is delaying their release of their software so that they have time to incorporate some of the great features that we already enjoy with EVE. Let's face it...RT Systems is up against some stiff competition, or at least high expectations from people who have been using EVE.

The second thing that I did with my VX-5R was attach a belt clip designed by Bob Dashoff (see a picture of the clip attached to a VX-1R at http://www.icongrp.com/~sllewd/beltclp.htm). This clip uses the factory mounting point and original hardware to attach the clip. The bottom of the clip rests against the battery, but does not interfere with removal of the battery.

Bob Dashoff's clip is securely attached to the radio with the same screw that the Yaesu clip is attached with, so it won'tcome off, but since there is only one mount point, the clip has a tendancy to spin around the screw. Mr Dashoff's original design uses high strength two-sided tape to keep the clip from spinning. On my VX-1R, I took the radio apart and drilled a hole through the rear case, and then added a second screw to secure the clip's mount plate. This gives the clip two mounting points on the VX-1R.

Now here's the question: Has anyone taken the VX-5R apart?? I need to get to the back of the rear case.

I can go in detail as to how far I got, but let me just say where I got hung up: There are three lock rings at the top of the radio that secure the volume knob, dial knob, and antenna. I can get the lock rings off of the volume and dial knobs be gently tapping on the with a small screwdriver, but I can't seem to get the antenna's lock ring of as easily. Does anybody have any comments on how to remove this lock ring, at any suggestions on tools to use to remove it?? I searched most of the hardware stores for something small enough fit the two notches of the the lock ring, and none had a good enough grip on the notches.

Thanks in advance for any responses,

---Vito

I have read all the complaints that people have been having with the Icom 2100H...
Sorry to hear of your problems. I have owned 1 since they first were forsale and just recently purchased a 2nd 2100H for the mobile. I have had no problems what so ever with either unit. I have ragchewed for hours on high pwr. & yes the radio does get hot but it's normal - show me a radio that doesn't get hot on high power. And these other problems with the Tone Squelch? What problems??? Don't know about any of these problems either... I guess I should say, that my 2100H is really the defective radio since it does not have all these similiar problems that all of you are having... I wish you all good luck... As for my opinion on the Icom 2100H -----
The best 2 meter mobile FM Transcevier I have owned in a while since my Yaesu FT-2500M

Ive got a Galaxy 5 and the VFO seems to be a 5.0 to 5.5 version so you wouldn't be able to use it with a DX-60 which uses a fundamental freq and/or its harmonic for the ham bands.

Message-ID: <36e5863d.11943814@nntp.iea.com>
Source record: 114577

Hi,

I am posting this message for a friend who has a Kenwood TM-741A mobile radio that locks in transmit mode when the mike is keyed up and will not release until it is powered down. We swapped mic's with another Kenwood unit and had the same results. Has anyone out there had this same condition (and how did you resolve it)? A schematic for this unit would help us find the cause of the problem (perhaps a bad relay on the PTT circuit). Thanks for your help.

Please email response directly to paul@999khouse.org (remove the 999 in the email address when responding, please)

3538. VX 5R ctcss decode problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-09 00:00:00 UTC
From: Solarpower1watt@Juno.com
Message-ID: <XNhF2.335$i12.3689@newsfeed.slurp.net>
Source record: 114591

I just received my new VX 5R today. It appears to have the famous ctcss decode delay problem. It is serial number prefix: 8N02... . When monitoring a channel in ctcss decode, (I'm not talking about scanning), it takes anywhere from 1/3 to a good full second before the speaker opens up, depending on signal strength.

Has this been corrected on any later models? My vendor says Yaesu Japan is currently working on the problem. Whether or not they will have any recall fix available in the future is unknown at this time.

My question is whether to hold out for a possible fix by the factory, or to take my mail-order vendor up on his offer to replace the unit with one of the latest units he has received.

I'd appreciate any comments and opinions on this. Thanks.

Ed

The Radio Shack speaker mic works fine with this radio. I think that
it's cheaper than the ICOM version.

So! You've owned three 2100H radios and they all had to be sent back to HRO. May I ask for what reason? Did they brake? Or perhaps you didn't know how to use them? Could you please elaborate on your claim and back it up with some facts. If you can't/won't do that, go to the following URL for the explanation of your radio problems:

Andrew, this one is easy. For an AM/CW/RTTY receiver under $2000 (or over $2000) it's a Chuck Rippel-overhauled R-390A/URR (about $700 + 8 month wait if you provide the R-390A, but he sometimes has one ready to go that he will sell outright). Absolutely, positively no question about it. How does real, measured, .07 - .08 microvolt sensitivity @4kc b/w with standard AM detection sound? Not to mention direct digital (mechanical) readout, 1 mc per band coverage to 32 mc, and real-thing Collins mechanical filters... Over $2000? What for? Nothing (available to the public, that is) on this planet built in the last 30 years can touch a properly tweaked R-390A on AM/CW, unless you just want to throw money around and order the chassis gold-plated or something. Ask the Army, Navy, Air Force, Marines, CIA, NSG, FCC, ad infinitum... The only real question here is are the legs on your operating table stout enough to take this puppy!

Yes, what is a QSY'er? A knob that really don't change frequencies or whut? Kindalike the "PANIC" buttons you could stick on the PC keyboards, you know, it'd give you something totwiddle with while your 8077, with too many TSRs, is booting up. God I love America! We got everything.

Re the R390A the best?? I don't think so. I used them extensively in
the navy ship/shore cw circuits, I think the SRR series had the R390A
BEAT when it came to selectivity. I have owned a few R390A's since
becoming a ham and have sold them off a soon as I could. The radio
is very cumbersome to operate, difficult to get parts for and a general bear
to move around. I would rather have one of those top of the line Icom
R 9000's or even an old Kenwood R5000 with the filters for an all around
performer. But, to each his own!! 73 de Fred.

3560. Help: Kenwood TS 940S

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-09 00:00:00 UTC
From: Jonathan Winter <jwinter@pacificrim.net>
Message-ID: <36E60E19.8DF2F01@pacificrim.net>
Source record: 114613

I have just purchased a 940S and all appears to work well with the exception of AM. When I use the AM mode, I receive nothing on the standard broadcast frequencies or for that matter any other frequency. The radio has no optional filters, only the standard YK88S1 filter. I may be overlooking something but I doubt it.... any help out there would be greatly appreciated. (I have no trouble listening to AM using SSB... plenty of gain etc... but when I switch to AM mode.... I can just barely tell when I cross a strong station, but I cannot hear the transmission....

Please reply to jwinter@pacificrim.net

Thanks all.

3561. Re: Wiring of Kenwood TM-V7A programming cable?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-09 00:00:00 UTC
From: Rick Pemble <pemble@earthlink.net>
Message-ID: <7c4ltmhke1@oak.prod.itd.earthlink.net>
Source record: 114614

This topic is a regular on this newsgroup. To date, nobody has been able to reproduce the schematic of the level converter that is inside the RS-232 DB-25 connector. I gave up and bought one, took it apart determined to reverse engineer it, and gave up. Small parts, unnumbered, etc. The connector at the radio is for a packet TNC which expects audio signals in/out. The cable has a level converter to convert DC RS232 signals for that interface.

cheers

Rick W4RP

From: Michael Willey <photog101@ameritech.net>
Message-ID: <36E73F28.98491657@ameritech.net>
Source record: 114379

I am looking at an Emperor TS-3010 which has one modification in it at this time (The Tone switch changes the bands). I see that although the frequencies have a 6 digit display, this radio tunes in 10 kc jumps. Is there a modification to shift to either 1kc or .1kc jumps. I would like to do this without unlocking the clarifier.
What other mods can be made to this radio? Is there a good service manual available for this radio?
Thanks in advance to the group:

> Andrew
>
Andrew-

Well, since you refer to "rig" I am going to rashly assume that you want
to both transmit and receive messages rather than just find a great
receiver. So first, let me say that if you mean you have 2K for the entire
station, remember the Three Big A's of DX: Antenna, Antenna, and......
Antenna.

If I had 2K for a shack, I'd buy a basic XCVR and put the rest into a
truely great antenna setup.

If you are looking for a tranceiver in that range, I'd check out the
Yaesu FT-920. Really cool receiver with 33Mips DSP, selectable rf preamps
(MOSFET and J-FET), IPO, different attenuation levels, a menu system
that customizes everything about the radio, built in antenna tuner, keyer,
digital voice recorder, etc, etc, etc.
Decent rig for 1449 now from various sources, Then buy the filters.

Just one ham's opinion. Doubtless I'll be corrected soon. BTW, this rig
also does 6 meters, and was originally
a $2300 radio.

Ahh, but that is not really necessarily so. While it may (or may not) be
true that a particular
radio is not type accepted for a certain frequency (for example, Linears
CANNOT be type accepted
for operation above 24MHz and below 35MHz) (see G1C09 in the General Class
question pool)
that it cannot be legally modified and operated by a ham. This is a common
misconception but
one disproved daily by lots of civic minded volunteers....

But then I know that you already knew this, so....

The Japanese are tighter on TX out of band than the US is on cell phone. If the CPU has a diamond with a J in the middle of it, hang it up, it is unmodifiable, short of replacing the CPU.

Source record: 114435

I am curious about the filters for the 746. I just bought the FL100 for
the 746 and it seems to work fine. This filter is for the 9MHz IF. I had
the choice of buying a 455kHz filter but I opted for the cheaper one!
What is the difference other than the IF and cost? Also, I would like
other filters, I would like one for SSB and one for RTTY. I want to
which to buy and in what combination(9MHz or 455KHz). I am asking for
opinions based on some experience.

Thank in advance

Rob Kling

Ken....

Hard to find a "bargain"! I used a home brew P.S....it was built by an old timer...it was heavey...and could handle 25 amps no problem....BUT...the problem was that it had an RF problem...as I loaded my new rig with it....the RF began leaking back into the rig and caused all kinds of problems when I got up to 100 watts....RF was getting into the power lines!! After trying various fixes...such as a good ground...and adding an RF cap to the output...I gave up and bought a Kenwood power supply for $200...and all worked fine after that! Good thing I didn't damage my rig with that damn Home Brew Supply!!

>Looks like
>a power supply is being loaded down or just not putting out the correct
>voltage

Yeah...that's what I was thinking! Is it in the transmit mode?

It shouldn't be too hard to troubleshoot the power supply. You probably can
run it on receive from an external 12 volt supply or battery....just to see if
it is the power supply.

I just bought a used TS 430...and I had a problem on transmit with RF getting
into my rig...I ended having to buy the Kenwood external Power supply...works
good now!
I bought it from a ham store...so at least they gave me a 30 day guarentee!
Plus...they are a Kenwood dealer so they can fix these things!

<BOOMHAUER MODE>
Yeah man I tellywhat that dang 'ol packet radio stuff is just buzz and beep and click-click-click and you got your internet stuff and all and it's just no good if it's not dang ol' straight key cw or spoken unaccented english.
</BOOMHAUER MODE>

But seriously, Check your ICOM to see if you can program known FM voice repeaters (and offsets, tones, etc.) into memory, then scan the memory channels. You may also be able to skip some channels during scan. Keep in mind that a few hams are using mic-encoders, which imprint a short burst of data at the end of some voice transmissions. Right now I find it annoying, but that's probably because I don't have one.
The 1998-99 ARRL repeater directory should have the voice repeaters listed for your area. I think I remember reading that they have excluded digipeaters from the listings. Dang 'ol yellow book.

From: leigh@media.media.keele.ac.uk
Message-ID: <7c5qaopct3@cfs2.kis.keele.ac.uk>
Source record: 114464

Hello,

I have been given a TNC but have no idea of its model, make or wiring back to the PC.

The only info I have is what is on the board - the name "J & P Electronics Ltd". The board is the 8-bit type that could also be slotted into a PC, whereas my model has been housed in a box.

I am trying to find the following critical info:

How to wire the board to a 9-pin D-type (the info written on it doesnt work or match up to any conventional serial wiring),
How to connect 3 LEDs that show power on, TX and RX.
Anything else relevant to it - compatability, etc....

All or any help appreciated - I'd rather try and get it going that bin it.

Many thanks. Please reply to address in signature only.

Leigh....

one of the differances is the 440 had a built in antenna tunner. There
where some circuit differances. I will say this I have had both rigs and
I think the 430 is more reliable, and cost less then the 440. So over
all I think the 430 is a better rig. Thats justy my opinion I could be
wrong.

Hello
Look at where the AM filter is sposed to be. Is there a board there
with a tunable coil? If there is it might have a cold connection. If
there isn't a board with a tunable coil that plugs into that crystal
filter slot, that is your problem. I hope I was able to help you.

From: BarryG <bgnospam@albany.net>
Message-ID: <7c5vc6$5e5$1@news.monmouth.com>
Source record: 114474

I would appreciate comments from those who have really put the Omni VI+ through its paces on SSB - how is its audio quality, selectivity, etc. I have heard that its SSB performance isn't quite up to par. I'm about 50/50 SSB/CW and looking hard at the Omni VI+, and perhaps the FT-1000MP as well. I know the VI+ is stellar on CW and TenTec is a great outfit to deal with, but how about the SSB performance?

Thanks for any info,
Barry N1EU

You really ought to sit down with one to find out. There is
just no way to communicate the details objectively (in my
subjective view :-) . I us the OMNI VI (upgraded) on
SSB a whole lot, and have worked with INRAD to get some
better filters for SSB (and they now make them for the
OMNI VI) at 2.8 KHz bandwidth, and that helps. The stock
2.4 filters are OK, but not what I considered good for
SSB. They are not very symmetrical in performance but
the INRAD replacements are.

The NR function in the newer OMNI VI is very nice indeed.

You may miss "slope" type tuning from two sides of the
SSB signal, for the OMNI has only one PBT control. However,
the OMNI has a lot of extra filter slots and you can really
do fine by adding filters to get the cut you like.

Audio quality of the SSB transmitted signal has been reported
as very good consistently, with the old 2.4 filters and with
the new INRAD 2.8's. I use a D-104 mike with mine.

Anyway, best advice, try one of each radio you are thinking
about, at least in someone's shack. The FT 1000MP is no
slouch, but not as fine for CW either. But it has many,
many bells and whistles you can't get elsewhere!

>other filters, I would like one for SSB and one for RTTY. I want to which
>to buy and in what combination(9MHz or 455KHz). I am asking for
>opinions based on some experience.

There are a few differences.
1. Filters at 455 KHz are sharper and the filter noise (hiss) coming from 3rd IF 2. Filters at 9 MHz provide selectivity where it needs to be, i.e. in front of the receiver resulting in better dynamic range. Generally they have worse shape, and noise at the end of the IF strips isn't filtered, often resulting in hiss.

For general CW work, 9 MHz filters are a better deal but they are a clear compromise. For sharp skirts and low noise, 455 KHz filters are a real pleasure. I use a 500 HZ filter at 9 MHz and 250 Hz filter at 455KHz. First for general work, second for tough situations.

Look closely at the slot for the AM filter. There should be a wire
standing up and the board will show to cut it. If the wire has been cut
and no filter is installed it will not rx in AM. If the jumper is cut it
needs to be resoldered. Check your owners manual, it should show the
wire in question..

Greetings, Looking for suggestions for a dual band (2M/440) mobile rig for my 1996 Dodge Ram pickup. I do not need all kinds of bells and whisltes. I want a radio that will monitor both bands at the same time or even 2 different frequencies in the same band. Cross band repeating??? Not necessary. Removable faceplate??? Nice but not required. Something easy to use and reliable. I am not on for extended periods, but would like it while I travel. Thanks in advance, Mike

The Kenwood TM-241A up till now has had only one problem, now it evidently has two problems

Problem 1 is that the connection between the display and the circut board inside will eventualy corrode and the display will go crazy.

Problem 2 is that it cannot recieve 800 meg.

:-)

3661. Kenwood TR-9130 2 Meter All Mode Comments?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-10 00:00:00 UTC
From: treynolds@my-dejanews.com
Message-ID: <7c6l37$b9p$1@nnrp1.dejanews.com>
Source record: 114502

I have found a Kenwood TR-9130 all mode 2 meter transciever that a local ham is selling for what I think is a good price ($175). It includes a PL board and cosmetically is a 7 of 10. My interest in this is mainly for use with the sattelites (F0-20, FO-29, and RS12/13) in CW / SSB mode.

Does anyone have any good or bad experience with this rig that they would like to share with me? I did a Deja News search but only found people selling the rig, no comments on how well it works. I tried checking the ARRL web page for a product review when it was new but apparantly they didn't review it.

Please post any replies or email directly to me (treynolds@email.exide.com). Please to not use the Email address above.

Thanks in advance and 73s
Tom

Message-ID: <36e6d70c.6860093@news.compuserve.com>
Source record: 114508

I have just received my European VX-5R. The links are (with four pots
to left), 0=off 1=on
01111000
I believe the US version is
00111000
and MARS
00011000
Is this correct. What are the other options (all off is wide
evrything I think) and how do they relate to EVE soft links?
I suspect that repeater shift is governed by the second link and that
switches European/American shifts. Come on, who has worked out all
256 combinations without lifting the copper pads (and without a
microscope)???

3668. FORSALE - MINT Kenwood TS-520S w/CW filter and mic

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-10 00:00:00 UTC
From: jpl@hoserve.ho.lucent.com
Message-ID: <7c6nt2$h8@nntpb.cb.lucent.com>
Source record: 114509
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,nj.forsale,rec.radio.amateur.boatanchors

I have a mint Kenwood TS-520S that I would like to sell.
In my opinion, the 520 and 520S are
some of the best rigs around and would make a
fantastic beginner station or a great backup rig.

For any novices not familiar with this radio, it is all solid state
(discrete components, so its very easy to repair if ever needed)
except for a tube driver and a pair of very
robust 6146 tubes as the finals. It has a builit in power supply,
but can also run off of 12VDC with an optional DS-1A
DC-DC convertor (not included). It also has connections for the
Kenwood DG-5 digital display.
It covers 160,80,40,20,15, and 10 meters in CW and SSB (upper and lower) modes.
The receiver section is excellent and I always get excellent audio quality
reports. Many folks say that these older Kenwoods are some of the best
sounding rigs on the air.

This rig also has the optional 500Hz CW filter
installed (genuine Kenwood option). Also included
is the Kenwood hand mic.

The price is $300 firm + shipping. You might find one for a few $ less,
but NOT is this great condition.

Mint condition TH-G71A (new), still on warranty. Comes with a SMC-33 microphone, PG-3J filtered cigarette lighter adapter, PB-39 high power battery and BC-17 charger. Includes manual, warranty card and original bill of sale, also original boxes. AES sells this bundle for $382.85 plus taxes.

I will let you have it for $300. U.S. including shipping and insurance. Reason for sale is that I need a mobile rig. Inquire by email if interested.

Source record: 114274

Hello
Has anyone replaced the 2N6456 finals in the Heathkit SB104 with the MRF455A's. They come in the same case style. After looking at the MRF455A they have the same characteristics. The differance between MRF455 and the MRF455A (NTE334 and NTE333) is the case style. The price is the only other differance, and that is a big differance. Does anyone have a diagram of the MRF455 in push pull. I was looking at the Palomar 255 amp and it has two MRF455 what appears to be in push pull but the amp comes with no diagram. I would of bought the thing for the diagram. I would like to know what the base resistor to ground would be with the 455's in push pull,and what the resistor going accross the two push pull circuits would be. The base resistors going to ground with the 2N6456 are 10 ohms and the resistor connecting the two push pull curcuits is 100 ohms.
Thank you for reading

My CAP wing has acquired an entire lot of MOT power transistors from a closing DOD repair facility and we need to identify them as to rating. They all look like similar packages to the MOT MRF-line, but these have only a MOT p/n, not the generic. We have about only 7 different style cases, but about 20 different part numbers. If someone can identify these for us (either MRF equivalent or power in/out, freq., and voltage), I'll personally pay that person a fee on behalf of CAP. What we do know is that they operated radios off 12 volts, were primarily on VHF and we believe that they were used on MOTRAC, MICOR, SYNTOR, etc. type radios. I'll give an example below of the kind of p/n's we have:

These look to be MRF316 or MRF (same case ID) The "M" numbers may be the clue:
M9741 947 8527 210
M9739 458-941 CS077
M1104 185 8612
M1107 185 8218
M9738 458 952 CN875
M1108 458 216 AQ558
M9850 458 017 AO330

This group all look the same:

M9636 185 719
M9689 526 170 500
M9622 185 8609

We've got about 5-6 more "groups, too! Any help???

The tool you need is called an adjustable beam spanner.
The best place to find one is a tool house which caters to
the optical trade (cameras, telescopes, etc). Edmund
Scientific may have one. They are expensive. You might
try taking the radio to a local camera repair shop and let
them take off the ring with their spanner. That should be
lots cheaper than buying one.

You might be able to use a trammel compass as a makeshift
beam spanner. Trammels are available at machine shop
supply stores (J&L, MSC, Travers, etc). That should be
cheaper if you buy an import (Pakistan, India, China, etc).

I installed the Rx filter. It is worthwhile. In fact it makes a big difference
because the skirts are so much sharper. I don't think the Tx filter is
worthwhile. The stock filter is fine on transmit.

Source record: 114282
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment

The frequencies at which line input impedance, Z, R or X, pass through maxima and minima depend entirely on distance from the point of reflection, propagation velocity and the type of discontinuity.

The distance to the reflection is determined from the DIFFERENCES in frequency between successive maximam or minima. For accuracy the frequency intervals should be obtained by averaging over a number of maxima or minima. Anything which tends to shift all apparent frequencies up or down, such as the measurement method or even type of reflection, is of little consequence.

For greatest precision the fact that at LF, velocity tends to increase with frequency should be taken into account.

No. It is more on a par with the IC-706 or TS-50 or DX70TH
with respect to HF. Where it shines is at VHF/UHF. It is a good
satellite and terrestrial weak signal rig, and a satisfactory FM rig,
which happens to also cover HF. If you're looking primarily for
a HF rig, then this probably isn't the radio for you.

3695. FS: Frequency Counter

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-11 00:00:00 UTC
From: "Joseph R. Erlewein" <jrerlewe@mtu.edu>
Message-ID: <7c8oo5lin1@campus1.mtu.edu>
Source record: 114285

Hello all,

I decided to sell my frequency counter. I like it but need cash. :P
bummer. Ah well, that happens. Anyways:

It's a DSI instruments Model 5600A. I believe it came from a high-school
electronics lab downstate. It's in pretty good shape. It's 50Hz to 512MHz
in range, has a 9-digit LED display, Two inputs, and three resolution
settings. It can run off of an internal battery (don't have it, but you
can either get one or make one) or a 9-15Vdc source. I use 12v. It's a
desktop meter, about the size of a Telcom cable modem box if you're
familiar with the size of those. Hey, who isn't. :) Anyway, it's smaller
than the average VCR if you're lost on the cable modem comparisson. 3.5"
high, 8.5" wide, 9.5" deep.

Taking best offer, I'd like to start the bidding at $80.00

Thanks,
Joe.

3696. WTT:RME 6900 and 6901 SPKR for TL-922A(working)

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-11 00:00:00 UTC
From: "David W. Fleming" <davefleming@novagate.com>
Message-ID: <7c8qftimm0@205.138.138.3>
Source record: 114286

Hello,
I wish to trade a very nice, clean RME 6900 and RME 6901 matching speaker for working, and clean Kenwood TL-922A linear amplifier.
I am putting together Kenwood display, and require the TL-922A in the line up.
Thanks for reading!

Jeff,

I have owned both, kept the 751a because of the analog S meter
and because I like Icom service. Performance wise, take your pick
- these two are the best of the best. CW, SSB, AM it's all just
as sweet on either of these radios.

I need the name, location, and phone number of a dealer in
New Orleans, that sells good power supplies, ie, Astron,
Alinco, MFJ, etc.
I have a friend on a merchant ship, that has lost her power
supply, and will be docking in New Orleans within a week or so.
She needs to get another one.
Any help will be appreciated.

> Yaesy and now their website is not up anymore. WWW.stdradio.com
>

The web site should still be up, although I think they were having some
problems with the server. Roger was not available because he was in
Japan. Here's the straight dope:

Marantz, who manufactured Standard communication products has decided
to get out of the two way radio business. They have sold the Standard
division to Yaesu, which amounts to nothing more than the name in
Japan, since they'll be keeping most of the engineering staff and
manufacturing facilities to make stereos, etc.

Yaesu will probably market some Standard amateur rigs in Japan under
that name, but they can't do it here as the tradmarks are owned by
Roger. The new company has contracted to make spare/replacement parts
for 7 years and Roger has plenty of Marantz-Standard inventory, so
don't look for them to disappear any time soon. Obviously, don't look
for much new in the product line.

It's too bad that the amateur market is so flat that Marantz felt they
needed to do this, as they made fine gear. The Japanese market, is
supposedly in terrible shape. Even though we won't see them here in the
States, a Yeasu-Standard will not be the same quality-wise, in my mind.
I have two Standard rigs and they beat every other amateur grade
product hands down in quality and performance. I guess I'll just have
to hang on to my trusty C568A and it's companion until I can't get
parts for them anymore.

I'll be interested in talking to Roger at Dayton, maybe he'll have some
more to add. For the time being, Standard is still alive, though I'm
not sure what effect this will have on the Land/Moblie division.

Hopefully, this has been helpful.

Must sell. Everything looks untouched, 20 million serial #. Mic, power cord, box. This rig sold new in 1991. I think they stopped making them in 1991. I have checked the rig out and everything seems to works perfect. I bought it from the original non ham owner who never got his license. I have the original shipping sticker from Texas RF Distributors, Plano, TX, shipped to the person from whom I bought the rig. $760 + shipping.

3715. FS & FA Electronic trainers (breadboards)

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-11 00:00:00 UTC
From: h89user@my-dejanews.com
Message-ID: <7c9cjl$oq0$1@nnrp1.dejanews.com>
Source record: 114305

I have a DeVry Inc. (Bell & Howell) Electronic Trainer w/case up for auction on eBay. . It was likely used in DeVry's technical electronic school classes.You can identify it as Item #75848077. Presently the high bid is only $5.00. There are 4 more days before the auction closes.

The trainer has multiple supply voltages AC at 12.6 volts and 6.3 volts, DC at 5.0 regulated and an adjustable power supply with separate controls for 0 to 17 volts and 0 to -17 volts. It's function generator can provide square, sine and saw-tooth waves. Both frequency and amplitude are adjustable. There are separate coarse and fine frequency adjustments. The workarea has two Velcro strips to hold the circuit being worked on. Two project boards with Velcro strips are included.

It is in great condition and has a hard plastic case with a handle. The case is 5.5 inches high when closed. This allows the case to be closed and put away with the components in place. The unit sits loosely in the hard plastic case that allows the power cord to be stored within the case when it is closed. Some of the dimensions (measured in inches) are given below:

Total top surface 9.75 x 9.5
Total area available for project boards 7.5 x 6.5
Comes with 2 project boards 6.5 x 2.5 and 5.5 by 2

This is the first of five trainers that I plan to sell. None of these other units have been listed on eBay. The other four include 2 Heathkit units somewhat similar to the above except that there is no case and the project boards are not removable.

The remaining 2 units are probably from the 1960's. The voltages available suggest that they are from the tube era (filament voltage). For these old units I also have a box full of the connectors used to construct the circuit. I thought that these units might be interesting to someone experimenting with motor control and robotics circuits

If anyone has any question on the trainer I have on eBay, or any of the others, my email address is h89user@aol.com.

>Well what does it receive?
>Is it cell blocked?
I have now tested further and there is NO blocking anywhere above 48 mHz including cellphones on this European VX-1R (in uk). I tested every 10MHz from 48 MHz to 998 MHz and think that was sufficient.

International Radio (on the web) has both Collins Mechanical filters
which are form, fit, and function equivalent to the Yaesu filters @ $120
bucks each. If you want even better shape factors & bandwidths (2.1 kHz
SSB, 250 or 400 Hz CW) they also have crystal filters (@150 each), but
they must be wired to a supplied board (that plugs into the filter slot)
via a coax and placed near the front of the unit). I've put the the
crystal ones (recieve only) & they work great.

Hi Don!

Have had my IC-756 for 18 months or so. Using an SM8 mike left over from my old 735 that was struck by lightning. (One side of the SM 8 is inoperative, but the other side works well.) Played around with the bass and treble settings and get excellent reports of the audio. Guess they are well-matched.

Hope this helps and 73 de

Amen. the best dx rig is the one with the best operator. 5BWAZ has been made as often by peoiple runing rigs constructed from old TV parts (in eastern Europe) as people who paid $5000 for their radios (in US). Equipment doesn't make DX; people do.

hi bill,

ive a ham friend who is a linux heavy. he's been running it
for years. if you are interested you might checkout
www.redhat.com . the software is there for many platform,
intel, alpha, etc.
also there is a linux (at least one) newsgrp.

here's a recent msg from the digital newsgrp.

{start paste}
A free (GPL) host mode terminal program for the Kantronics Kam Plus is
on my web site
http://www.cvine.freeserve.co.uk

I run it on linux but it should compile on any Unix system (I would be
interested in reports from *BSD users).

Reports from users would be welcome.

Chris.

3757. Alinco Pair: (1) DJS-41 uhf & (1) DJS-11 / Brand New / Modified

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-11 00:00:00 UTC
From: radioman@localnet.com
Message-ID: <IHIF2.36$Ah3.225@news14.ispnews.com>

One Of Each / Will not split up the two. They are one month old, barely used and mint. Each has 340mw power with the (not supplied) 3AA Alkaline batts. If you use an optional (not included) power adapter for the car or power supply, it jumps to 450mw. I am able to hit several local repeaters from my suburban living room with each in the western NY area. Both weremodifed at East Coast Amateur for whatever the available extended frequencies are for each at extra cost during the time of purchase. The were a present from my wife for our anniversary. I have a lot of UHF and 70 cm radios and have just gotten a 10 meter rig that i hope will give me the incentive to upgrade. I'd like to use the money from these Alinco units to go towards the 10 meter unit. The radios are both the same size: 3.94"High X 2.17"Wide X 1.10"Deep and weigh in at just 6.53 oz with batteries. They have the original packaging, instructions and blank warranty cards for you to fill out. One was bought late January and one was bought early February. I am asking $200.00 firm on these which is what I have into them minus the $70.00 modification charge we paid because we wanted it done right. On that end, I never really asked what the extended freqs are, I just like to have radios modified to their full capability whenever possible. I will ship only within the continental United States, NO international transactions. Payment will be by certified check or money order only. Thanks for reading and have a nice day.

Check at Hamfests. I have seen these cables with the 'T' connector for about
$8.00.

3767. Measuring 75 ohm cable with 50 ohm FDR

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-11 00:00:00 UTC
From: john.ackermann@daytonOH.ncr.com
Message-ID: <uFauiG8a#GA.146@rpc1284.daytonoh.ncr.com>
Source record: 114410
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment

I have access to an HP8920 service monitor with accessories and software that allow it to do nifty things like swept return loss and cable fault detection. It uses frequency domain reflectometry to do the cable fault test stuff -- it apparently frequency sweeps and then runs the return loss variations through an FFT to generate distance-to-fault. As you might guess, the system is designed to work with 50 ohm impedances.

My question is what will happen when I try to check out some of our 75 ohm CATV hardline runs. I understand the impact of 75 ohm line on return loss/VSWR measurements, but I've never worked with an FDR system before, so don't know if the line impedance mismatch will screw up the calculations. My guess is that the overall return loss will be reduced from what it would be in a 50 ohm system, but that irregularities in the line will still show up, and the cable distance measurements will still be accurate. Is that correct?

Thanks,

John N8UR

I'm not familiar with this HP instrument, however,
I do use an HP 8510C with the same FFT TDR
capability. There is one fundamental flaw in the
technique; for good resolution, it requires wide
frequency sweeps. So if you are trying to measure
a narrowband device, you're in trouble.

That said, you should still be able to detect
faults and their location. In the "low pass mode"
the 75-ohm system impedance will just look like a
discontinuity (rho=0.2) starting at the
measurement port. With no further
discontinuities, you should see a flat line
extending to infinite distance.

The neat thing about TDR is you can see where the
discontinuities are and their individual mismatch
magnitudes. With frequency domain swept
measurements all you see is the ripple pattern due
to the beats between multiple mismatches. You
know you have more than one mismatch, you just
can't tell where they are.

Have fun

I have an Icom 735 w/ the keyer, 500 Hz CW filter, and two FoxTangos! This rig
is awesome!
It looks as if new.
I am the second owner. The original owner was an electrical engineer, and he
really new what he was doing.
There just cannot be better performing 735.
It is blemishes as well.
I have the original box and packaging, manual mic.
Further,
I have an IC-SP3 speaker, a PS55 Powersupply for it
I have an SM20 as new
I must get 650.00 for the 735
135.00 PS55
175.00 SM20
50.00 SP3
= $1010.00
or $900.00 for it all + shipping!

3778. Need Sams manual: President Grant 40 ch. SSB

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-11 00:00:00 UTC
From: k5dh@raytheon.com
Message-ID: <7c8jic$54p@news.rsc.raytheon.com>
Source record: 114421
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.cb

I need the Sams manual for a President Grant 40 channel SSB CB.
I have access to a large commercial copier, so what I'd like to
do is borrow your original manual and copy it myself. I promise
to treat it with utmost care, return it to you promptly, and pay
the postage both ways. Our local library doesn't have any Sams
manuals, and I don't have the time to to the Dallas or Fort Worth
libraries, plus I'm not a member of either. Can someone help me
out here? I'd like to get this radio working properly so I can
convert it to 10 meters.

73,
Dean / K5DH

3779. Anyone have a source for small quantities of toko coils besides digi-key?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-11 00:00:00 UTC
From: nicholas charles caruso <caruson@certco.com>
Message-ID: <36E7DA06.102AD132@technologist.com>
Source record: 114422
Cross-posted to: rec.radio.amateur.equipment,sci.electronics.design

I need a 3.9mH shielded coil (specifically, a toko 10RB series).
Digi-key carries these, but they just stopped
(perversely, to my mind) stocking the 3.9mH value.

Anyone know a place where I might be able to buy small quantities (4 or so) of this part?

I've already tried: newark, electronix express, jameco, mouser, Dan's Small Parts and RF Parts.
No dice.

I'm willing to buy a pot core form and wind this myself if it's feasible to do by hand, but I'd rather buy the toko part if possible.

>Mike AA7QA
>

Not true Mike...
What is ill-eagle is producing too many spurious emmisions. I am a MARS member and am in the process of setting up a shore station for USCGA... have some friends in the auxilary and intend to sign up.

The point is that "ham gear" per se is not illegal. Unlicensed operation, harmful interference, etc is.

On the other hand, a marine license does not cover modifying gear. Anyway, the clear point here (at least my point) is that licensed operation that does not cause otherwise illegal side effects which uses ham gear is legal as long as the construction or modification was also legally done.

To cite my own situation: Yaesu FT920 and a MARS license from the DOD. I got the OOB mod right from the factory in exchange for a fax of my MARS license. If I sold it, I might have a legal problem, but for me to mod it and use it is legal. Which was, I think, my only point. As a matter of fact, I can build or modify a Linear which operates outside the limits for type acceptance AND outside the amateur bands, and it's just dandy with the government.

As you correctly point out, it is NOT legal for me to exceed FCC standards with the radio. However, even if I built it from nothing it is legal for me to operate until it becomes a problem for some other reason.

As an aside, all recent Canadian handhelds that I have dealt with are all marine capable, but you lose the automatic repeater split feature.

The UNIDEN I use on the boat is identical to several other UNIDENS for different applications, and as a ham I could if I chose build one from scratch as long as it caused no harmful interference, etc.

Hope you see what I'm getting at here... type acceptance is required for sale, not use. Compliance and a license is required for use.

Best 73's
Bob

I also own a TS850 but please bear in mind that the ARRL lab tests on this radio were performed using a 250 Hz second IF filter where 500 Hz is normal. The 250 Hz filter makes the performance specifications look better than if 500 Hz filters were used
in both IFs. The ARRL did the FT1000D a big favor by using 250 Hz filters in both IFs.

My TS850 perform great on CW with the 500 Hz filter in the first IF and 250 Hz filter in the
second IF. However, the 250 Hz filters does ring quite a bit. The radio is not so good on SSB
during contesting. I have the 1.8 KHz filter for the first IF but there is no slot available for the
second IF since I have the 250 Hz filter in there. I just turn on the AIP, add attenuators when
necessary, and play with the slope tuning to try to eliminate neighboring signals pounding away
during a contest.

I have for sale a Radio Shack HTX-202 two-meter handheld transceiver.
I am the original owner of the rig. The transceiver is in excellent
condition, and has received little use.

The HTX-202 is complete with everything that came with the rig,
including the manual, inserts, battery, akaline case, charger, etc. I
did *not* keep the original box, however.

Also included is the matching Radio Shack cigarette adapter cable.

Price: $95, plus shipping.

Thanks!

I have heard many stories of how broadband antennas such as log periodic antennas can have this very common effect on radios such as yours. If you're experiencing this phenomena wih a dedicated monoband or similar discriminating antenna, then signal mixing and overload by excessively strong or local signals will be other avenues to explore...

good luck

Don't get to cocky about the leverage you have with your credit card company. They issue an immediate credit while the disputed amount is being investigated, but if they determine that the charge was legit, then the monkey is right back on your back. And the time/effort it may take to back up your case can be onerous.

Dealing with overseas people you don't know much about can save some money but it definitely increases risk. Your credit card is only of limited protection.

Date: 1999-03-12 00:00:00 UTC
From: "Joseph R. Erlewein" <jrerlewe@mtu.edu>
Message-ID: <7cc5jt$6pp$2@campus1.mtu.edu>
Source record: 114246

I have a pseudo-working Kenwood HT. It's TR-2400. Has leather case, charge stand, external mic, and car adaptor.

Weird: the radio only works on EXACTLY 9.6vdc. Anything else will make the display freak out and it will not work properly. The radio only works on certain frequencies; ie: if you try to dial it to a certain freq. the radio resets everything to factory default. Might make a packet rig, I've no interest in it.

I'd like to get at least $10 for the radio plus shipping charges, highest bidder takes it.

Very cosmetically clean, if you have a beat-up radio, this one is pretty clean.

Forsale only no trades!

1. Forsale, JRC JST-245 HF thru 6 meter Transceiver. Radio is a Quadruple Superheterodyne receiver and 150 watt transmitter, with autotuner for HF bands. The power amplifier uses MOSFET SEPP technology. Internal switching AC power supply. Three antenna connections comes with 1.8 ssb, 500 CW 455khz IF as well as the 1.8 ssb, 500 CW 9.455 filters. The optional monitor board. Origianl box and manual and Yaseu hand mic. Radio is in perfect condition. $1,600.00 plus shipping Firm!

2. Forsale, JRC JRL-2000F HF 48 MOSFET Solid state 1KW Amplifier. Amplifier has a fully automatic antenna tuner 2000 memories. Four antenna connections, auto AC voltage sensor for 85 to 264 VAC 50/60 hz. Just plug it in and it knows what the voltage is! Completely Auto select for band,tuner,antenna with radios that have amplifier exciter output. Also comes with remote control. "Just like a TV remote" This unit is one piece table top model. Perfect condition. Shipping box and manual included. $2,600.00 plus shipping Firm!

Because the JRC-245 is computerized to work with the JRL-2000F. Will sell as a package, Both pieces for $3,700.00 plus shipping firm!

3814. Re: IC 751A vs. TS850S ?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-12 00:00:00 UTC
From: Bruce Walker <bruce.walker@Corp.Sun.COM>
Message-ID: <36E9A942.202294FD@Corp.Sun.COM>
Source record: 114250
Body handling: Binary attachment payload not displayed: bruce.walker.vcf

Here is a summary of the receiver specs from the ARRL lab tests. Both
rigs
apparently have excellent sensitivity and blocking dynamic range. The
850
handles IMD better. Either radio should be great at pulling out weak
ones
on normal/quiet bands with good filtering, but the 850 should hold up
better
under with lots of strong signals in the band (e.g., contesting).

I recently purchased an excellent used 850 after looking through lots of
performance data.

Rig RECV MDS RECV BDR IMD DR IMD 3rd-ord INT
80m/20m dbm 80m/20m db 80m/20m db 80m/20m dbm

3820. Recommendations for 2M HTs

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-12 00:00:00 UTC
From: "Mark S. Jennings" <markjenn@halcyon.com>
Message-ID: <7ccd4lqah1@brokaw.wa.com>
Source record: 114256

I'm returning to ham radio after ten-years of inactivity and need a new 2M (+ maybe 440 and 6M) handheld. Things have gotten complicated in my absence.

My immediate interest is a very small and light HT that I can use for an upcoming motorcycle trip for bike-to-bike comm. I want it to be as small as possible so I can just put it in the pocket of riding suit (smaller rubber duckie a plus also here), 5W or great output for decent range between bikes w/o repeaters, easily accessable speaker/mic connections so I can patch in custom helmet-mounted mic/speaker, and all-day battery life with maybe 30-minutes of transmitting time in a 10-hour day.

After the trip, I'm just looking for a good all-around HT. It can be single-band (2M), but it doesn't seem like dual- or tri-band stuff is that much more expensive, so I'm tending to think I'll get a dual or tri-band model. I can spent $300-$500.

I've been reading/looking at the Yaesu VX5R, FT-50RD, Kenwood TH-G71A, TH-D7A (packet stuff sounds interesting), and the Icom IC-T8A. I'm tending to the VX5R for small size, lithuim battery, and acceptable performance but some have reported a bunch of little problems. When I was active, I had Yaesu and Kenwood equipment and I always thought the Kenwood stuff was more solid. Any suggestions about where to buy appreciated also - I assume HRO and AES are the big web/mail vendors.

Thanks for any suggestions,

- Mark (N9AFL)

3825. Re: ADMS Software

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-12 00:00:00 UTC
From: Vito Villamor <vovillamor@earthlink.net>
Message-ID: <36E99AC3.AECFF27B@earthlink.net>
Source record: 114261

Right now, EVE software works primarily on the Yaesu VX-5R, not on the FT-50R.

And yes, it is alot better than ADMS software if you're trying to program a VX-5R
because there IS no ADMS software available for the VX-5R yet. Thanks to a few
hardworking programmers and hams, VX-5R owners may never have to buy software
to program their radio.

They will, however, need to at least have an interface cable, and you just can't buy the cable
without buying the software. On the flip side, your can't get the software without getting
a cable with it. To Ed Burke (who has the cable and is looking for replacement software),
if you registered your ADMS softwarewith RT Systems, maybe you can get a replacement from
them. If you're not registered, I bet they're going to try to sell you an updated copy at
full price. [Not to add insult to injury, Ed, but what happened to making a backup, or was your
software copy-protected in some way? The first thing I did when I got my ADMS was make
a backup disk, and made sure that it worked.]

As I have mentionned before the reason I was waiting for the euro version is because the US/can version will have different firmware. Imposible to cell mod. Its a requirement of FCC part 15 which actually states that radios can not be easily modified (by removal of diodes or jumpers) to receive cell.

Cheers Eric. And its dam good to hear the euro version is out. can any body tell me how much and help me get one please.

Hello Netfriends,

I'm trying to identify the chip used in the Uniden BC-3000XLT as the
RF receive frequency synthesizer. According to my schematic, it's
labeled "M640866P", but I can't seem to find any info about it.
Does anyone have complete info about this chip or at least a
manufacturer name? A data sheet would be probably too much to ask
for...:-)
In addition, I'd like to get a full partlist of this scanner.

Thanks and best regards,
T-man

Note: when Replying, please email me directly in addition
to posting here, so I don't miss any responses. Don't forget to
remove the "97" from my email address inserted as an anti-spam
counter measure...:-)

3842. Ads,Catalogs on ebay-Ham gear, `37 Zenith, tube audio, Sylvania Halolight TV

Newsgroup: rec.radio.amateur.equipment

The following advertising brochures & catalogs are currently being offerred on ebay
auction. If you are interested just go to the address listed for that item.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=76189559

Zenith Radio 1937 advertising folder. Approx 15" x 18", pictures on both sides. Folds to pocket size. Features the full 1937 product line including the 25 tube "Stratosphere" , 16A63, 12U158, "Zephyr" models , chairsides, etc. Pictures at least 45 radios. Also features Ebony, Bone White & Maple cabinets as well as the "Wincharger", Zenith auto radio. optional "Privacy Plug-in" headphones & a lot of interesting information. Piece is in very good to excellent except that some of the fold lines have worn through. "The Outlet, Radio Dept, Home of WJAR" is stamped in blue on what would be the back if you folded it up

****
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=77074933

Allied Radio Catalog-1949 ham, tube audio, radio & television kits, microphones.
Catalog #117. 176 pages. Nice pictures of the Hallicrafters T54 & 505 Televisions & National TV-7. HAM GEAR- Features Hammarlund, National, RME, Hallicrafters, Stancor, Harvey-Wells, Telver, Sonar & McMurdo-Silver transmitters & receivers, Knight kits, wire recorders, test equipment, parts, etc.
High-Fidelity tuner & amp manufacturers include Knight, Meisner, Collins, Radio Craftsmen, Pilot, Howard, Altec-Lansing, Goodell & Brook plus speakers, drivers,
turntables, etc.
Other interesting items, TV kits, microphones, RCA AM-FM demonstrator which is an operating 6 tube superhet for demonstration of radio theory. Condition is very good overall, the spine is intact except for about 1/2" tear at
top. Cover & first 16 pages a little dog-eared on the lower corner. No writing in it,
both covers still firmly attached. Even has an order form & envelope still inside.
****
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=77066338

1956 Sylvania Halolight Television Brochure. Pictures of 14 21 and 24 inch TV sets, with model numbers, in a 12 x 23 inch fold-up brochure. Flip side

explains why you need Halolight and other interesting information.
Condition is very good except it is heavily creased on the fold lines, there are 7 small holes where the lines intersect and a total of about 4 inches where the fold is worn through. There is a little writing (a little pen, mostly pencil) near a few of the models and an old yellowed piece of cellophane tape about 2 inches long
****
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=77000371
Heathkit Fall 1979 Catalog. All kinds of neat stuff, a digital weather station, Pro
series Hi-Fi, even some 4 channel equipment, Ham gear (SB104A looks sharp with it's digital readout), Computers like you wouldn't believe (The H8 uses a blazing fast 8080A processor & you can add an amazing 16K of RAM to it for only $395.00. You even have the option of adding floppy drives to it. Computers will never get any better than this stuff), organs, hand held calculators, boating
equipment, radio controls for model planes, automotive troubleshooting tools and
on and on. It even has color TV kits (I built the GR2050 many years ago). This book is just full of memories. Condition is excellent. 104 pages 8 x 9.5 inches.
****
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=76764327

1955 Sylvania Halolight Television Brochure. Pictures of 13 21 inch TV sets in a 12.5 x 19 inch fold-up brochure. Flip side explains how Halolight brings Eye Fidelity to TV. Condition is very good except it is heavily creased on the fold lines, there are 5 small holes where the lines intersect & there is a little writing (some pen, other pencil) near a few of the models
****
RCA late 50's Radio, TV, Phonograph booklet. Twenty pages 6 x 6 inches covering Stereo-Orthophonic High Fidelity victrolas, modular units including TV's, tape recorders, table radios (including one with a built-in cigarette lighter), clock radios, 45 record players, transistor radios and auxiliary speaker/charger for transistors. Some pages in color. Pictures of at least 50 products. Nice color pix of the Strato-World III transistor portable. Condition is very good. The booklet folds in half to fit in a shirt pocket so it is creased in the middle but no tears, cover and all pages intact.
****
Thanks for taking a look.
John

3843. Info: How do I mod a Motorola Radius M208 Low Band for 6 Meters

While there are mathematical and formulaic answers to your question, the
real answer lies in practicality.

Practically, yes, another 5 feet will probably help at those freqs. If you
are going to spend the extra 30 bucks and go to the trouble just for 5 more
feet, forget it. But, if you are going to work on the antennas anyway, go
ahead and do it.

Yaesu FT-840. Very low hours. In original box with original packing,
microphone and manual. Stock filters only.
Checked and working fine.
Only mark I can find is a very faint one
about an inch long on the bottom cover. Will probably rub out.
Otherwise looks brand new.

$575 (firm) plus shipping from 78728

Prepayment or COD requested, positive references available on request.

3866. Re: VX-5r low audio

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-12 00:00:00 UTC
From: Larry Benko <benko@aztek-eng.com>
Message-ID: <36E93447.16DAF646@aztek-eng.com>
Source record: 114363

Glenn,

Below is an excerpt of previous e-mails concerning the VX-5R

Great web page about the VX-5R.

http://www.icongrp.com/~sllewd/vx5rmain.html
http://www.ticon.net/~davez/vx5r.html

I own one from the second lot. I don't notice the excessive
delay on tone squelch as others have noticed but I don't use
that feature extensively. However I do have the weak audio you
mentioned. Side by side comparisons with an Icom W32A, Alinco
DJ-191, and the VX-5R produced uniform comments about
the VX-5R having the weakest audio. For what it is
worth the stock settings for my HT were as follows:
6m pot. = 55% of clockwise rotation
2m pot. = 45% of clockwise rotation
70cm pot. = 30% of clockwise rotation

I adjusted the 2m pot. to about 55% of rotation, the 70cm pot.
to about 50%, and the 6m pot to about 70% and now the audio on
all 3 HTs appears to be similar.

I too have a VX-5R, S/N 8N02--- and side by side tone squelch
comparisons with my W32A (1 HT held to each ear) show that the
VX-5R opens the squelch later than the W32A but just by a fraction
of a second, no where near the 1-3 sec. that some experience.
General scanning seems to indicate that the VX-5R does stop at
repeaters with a subaudible tone (and the VX-5R set to tone squelch).
However if it sometimes did not stop, I'm not sure that I would
know. I mainly bought the VX-5R to use for foxhunts and the
all metal case works well when close in. Also being able to tune
to the other side of the 1st IF (e.g. 146MHz + 2*47.5MHz) with
about 30 db. of signal attn. again works well. All in all, I like
the VX-5R but I too wish the tone decoding was a little faster. By
the way when I got the VX-5R I received several comments about weak
audio. However after turning up the audio pots. (for all 3 bands)
this comment has gone away. The pots. are located under the
sticky label in the battery compartment that covers the temp./
barometric pressure unit.

3868. Adjusting PK-232 LED display...

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-12 00:00:00 UTC

Adjusting PK-232 LED display...

Hi.

I am looking for the method of adjusting the LED display on my PK-232.

For contesting I will be using a HAL P38, just installed, (gives much better performance). But..... The onscreen tuning bars are much more difficult to align quickly than the PK-232 LED display. So I am feeding audio to the PK for tuning purposes only.

The PK-232 display shows the 'on frequency' position about 20-25 hz higher than the HAL P38. Want to adjust the PK display to match. Any gurus out there that can tell me how to move the PK display frequency center?

Thanks.

You know, I'd like to know what exactly is wrong with Radio Shack radios?? I own 4 R/S Ham rigs and they all perform excellent. The prices are always decent and the availability is always there.

I guess some people just don't like buying from the Wal-Mart of radio stores and would rather shop at the Saks 5th avenue stores.... Well, whenever one of my radios goes down, there are a lot more Radio Shack stores that I can find and take it to than there are the big Yaesu or Kenwood or other big name retailers.

Some say the Radio Shack employees are not up to speed on Ham gear. Well, two things... How many ham radios are sold thru them each year versus walkmans, tv's vcr's.. If you were a salesman, would you specialize in a lesser selling product or the most popular selling one?? And as for customer service... I can personally relate that as a newly minted No-Code Tech, I went into an Atlanta HRO a couple of years back and once I told them I was a no-coder, they pretty much didn't wnat anything to do with me. Guess they couldn't make thier super commission off a 2 meter ht. You go into Radio Shack and never get asked what class license you are.

Radio Shack offers a large service to our hobby and I think they should be given a little more credit than getting bashed on the head by someone who spent too much money on a radio and now wants to justify his overspending in any way possible.

Well, that's my story and I'm stickin to it.

Sorry for taking up so of your time.

I had just assumed it would be required because the Icom tribander has a "permanent extender", and they don't advertise sub-50 MHz reception (except AM broadcast).

Chalk it up to another typo in the manual?

Either way, it doesn't seem to affect 2m/70cm, but I've never actually done any a/b comparisons. Might be worth an experiment.

Eric KC0FBS

3883. Another VX-5 antenna question

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-13 00:00:00 UTC
From: Eric Ellington <attnspan@earthlink.net>
Message-ID: <36EB2D55.22E13833@earthlink.net>
Source record: 114032

My apologies if this has already been covered, but my news server doesn't appear to retain many messages.

Anyone tried to use another antenna (such as a mobile dual-bander or a handheld 1/4 wave whip) with the VX-5?

Well, I did (both a mobile and whip), and the performance was interesting, at least on 2m. They definitely pulled in the signals, but they also seemed to pull in images from other frequencies. For instance, right around 145.275, I picked up a local Wx broadcast (full quieting, pegged the "meter"). I also received a couple of much weaker images of the same signal 30 KHz or so above and below 145.275. Then, somewhere up around 147.500 I picked up a local TV station (couldn't identify which one, so I have no idea what its frequency is).

Replacing the Yaesu supplied antenna completely removed the images. There wasn't even a change in tone around these frequencies to suggest that it was the difference in antenna gain that made the difference.

So, is the supplied antenna an integral part of the receiver? Or do I have a bad unit?

Thanks.
Eric KC0FBS

Source record: 114128

I would recommend the FT-847. Although I do not own one, I do own a 736R which is great radio that the FT-847 has replaced. I was a lot like you when I purchased the 736R. I would have bought the FT847 if it were available at the time. The FT847 is a great radio! Also I understand that it can receieve to 512MHz, so you can use it like a scanner. If your primary concern is HF then buy an HF radio. The really good HF radios do not come with 144/440. They also do not come cheap! Looking at the total package the FT847 is one radio, one power supply, one device to connect to you TNC and computer etc.

I hope this helps

Having owned this transceiver and used it.,
I came to the conclusion that the transmitter with its pair of 6HF5s
boasts a coupe hundred watts easily ++ with suitable ssb audio. I
found the receiver to be a bit knarly by todays standards, however. It
also lacked the sensitvity on the higher bands making typical operating
on ten meters a bit of a hassle at times.
As a lowband, ssb unit where you don't move around much, it had more
value.
Its a bit of hodge podge mix of tube and early solid state technology.
At the typical price usually asked for one of these nearly collectible
items, I found the ts-520
a far far greater value in the ham shack in every dept.

I have for sale the following VHF FM power amps.

Item 1
Trilectric A2080H... Units are currently on 153 Mhz and do not have tunable caps to retune.. Can be used on commercial band, or if you are handy could install variable of fixed mica caps to retune for your needs.. Currently work down to bout 146 Mhz in the ham band..

20W in gives 80W out at 13.5VDC. WIll work down to 10W input which gives 40W output.

$45 each + Shipping.

Item 2
Henry C130A30 commercial rated power amps.. Units provide 130W output at nominal 30W input.. Are tunable 136- 174Mhz.. Will tune per your requirements.

This is the commercial amp, with better than 70DB below carrier harmonic filter in the output.. Units are 50% duty cycle as is, and 100% with fan cooling.

$85 + shipping each.

Thanks for reading..

Hi Rick
The 706 doesn't have the proper outputs for a transverter.
Downeast makes a 25 watt attenuator that you can put inline
that will lower the signals to the correct level. Call DEM &
ask for Steve, he will be happy to get you setup with the
right parts.
Mark

3905. Help! Kenwood TK-830 question

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-13 00:00:00 UTC
From: Tony Szablowski <a2112szablowski@worldnet.att.net>
Message-ID: <7cekof$2a1@bgtnsc03.worldnet.att.net>
Source record: 114146
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.swap

I've got a UHF TK-830H mobile that suddenly went dead upon powerup.
Now, I turn the unit on and get the self-test beep but I get no
display, no audio other than the powerup test beep, and it doesn't
respond to controls on the KCH-3 remote head. I've opened it up but
didn't see anything burnt out, though there might not be any
indicators.
Any help/directions is _GREATLY_ appreciated folks, since I've no $
to take this beast to a repair shop. Thanks.

One last item: it does not Tx either.

Summation: the KCH-3 control head doesn't seem to work at all except the power button, the unit does appear to turn on because of the power-up test beep. I hear no audio and the radio doesn't Tx. Thanks again.

> see your name on the messages.

Hey - it could be a lot worse...people with unfair, unjustified grudges and
chips on their shoulders could dominate. But, thank goodness, they usually
fall by the wayside and find another group to abuse.

Try Radio shack for the bulbs. As for the freq readout, the FT1 does not
have a freq counter so it will not read the actual freq. You will have to
adjust the osc which have a bad habit of being a mile off. Most likly the
54 mhz osc is the culprit due to aging of the crystal and low quality
trimmer caps. You can order a new crystal from Yaesu and consult
Communications Quarterly article by Cornell, WB3JZO regarding the trimmers.
The FT1 is a good radio, but like all it has its little qurks. Good luck.

Source record: 114164

Mark,

I've had a VX-1 and FT-50. The 50 is a nice rig but there are smaller
ones for the pocket. Also the On-Off button is too easy to hit and
pwr up by accident and run the batt down. The VX-1 is of course
smaller, less pwr -- but the Li-Ion battery is great. My recommendation is
to get the VX-5. I can live w/ the CTCSS bug.
I think it is a good way to go.

msb.

I hear about a lot of people who are going to "wait" and see what
happens (like maybe the code requirement will vanish). These are the
same folks who will still be waiting for something to happen in the
murkey future. Study now or later, it's your choice. I'm sure you will
enjoy the pride and sense on accomplishment you will feel once you have
that ticket on your wall. Good Luck

Cross-posted to: rec.radio.amateur.equipment,alt.ham-radio.marketplace,rec.radio.swap

Compaq LTE 386s/20 with modem, 60 MB Hard drive, 3 1/2" floppy, 3 MB ram, printer port, serial port, nylon case, Series 2802 AC Adapter, Two (2) Series 2801 batteries, and dual battery holder for charging from the 2802. I was told it has a sound card output jack, but I didn't see one on the setup.

Known problem:
Small plastic cap cover hinge screw is missing.
Hinge on battery door is broken, piece of tape hold well.

Both batteries require service, was told by a battery reconditioner that it would cost $20.00 a piece to recondition batteries.

I purchased a group of laptops from a lease surplus house. I think it will make nice field day computer even without the batteries if you had a inverter or generator (35 watts)

Price is $135.00 plus shipping and Insurance - USPS Priority with signature card - two boxes. Funds in US Dollars. Western Union or USPS money order only.

While the unit is in excellent working order, except for batteries, it is being sold as is with no warrantee.

Thank you
Morris

Cross-posted to:
rec.radio.amateur,rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.cb,rec.radio.swap

The original poster wasn't very specific, but I expect his complaint is
that the offending individual REFUSED the COD, thus the charges bounced
back to the sender.

Attention mid-atlantic hams. The 14th annual York Springfest takes place this Sunday, March 14 8-2 at the York County Vo-Tech School just off exit 6 of I-83 in York PA. Visit our website at http://members.aol.com/yorkfest

Join us and break out of those winter ham doldrums.

3936. JRC NRD-525 versus NRD-535 and JST-245 RX?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-13 00:00:00 UTC
From: DavidC <davidc@bit-net.com>
Message-ID: <01be68a2$8e19d1c0$0a8592d0@Bit-Net.bit-net.com>
Source record: 114186
Cross-posted to: rec.radio.amateur.equipment,rec.radio.shortwave

I am seeing some JRC NRD-525 receivers for sale. Can someone
explain the differences between the receive qualities of that
receiver to the receive section of the JST-245, please?

I may consider a discrete RX-TX pair if the JRC NRD-525 receiver is
equal or superior to the JST-245 RX section (I have my doubts since
the RX section of the JST-245 has tracking front-end tuning rather
than a broadband front end, and it has a wonderful filter system ...
but thought I'd seek the opinion of the JRC experts here!).

Also, please, the following specific questions ...

1. Is there a significant difference in the internally generated noise
of these different models?

2. Is there a significant difference in the sensitivity of these different
models?

3. Is there a significant difference in the stability (non-drift) of these
different models?

4. Is there a significant difference in the audio quality of these
different models?

5. Is there a significant difference in the selectivity of these different
models?

Thanks for your time and your informed feedback, users are the most
valuable source of information!

3937. If no more Alinco, who will repair?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-13 00:00:00 UTC
From: macw2389@my-dejanews.com
Message-ID: <7ccfl7$g21$1@nnrp1.dejanews.com>
Source record: 114187

I was surprised to hear about Alinco's net loss $50 mil for Mar98 - Mar99, with the sales of $150 mil. The situation is not in their favor, and I was just wondering whether my new Alinco radio can be repaired by someone else IF something happens to the manufacturer. (knowing that warranty would no longer be effective) marc

You can, but you'd be better off with the FT51R. That can do full duplex
so you can hear your own downlink. That's very helpful for satellite
work.

Tune the input for max power out, tune the output for "good" output AND low VSWR. Its best to use 2 wattmeters (Bird, et al) and view VSWR and power out simultaneously.

The problem I having is balancing the transistors. The ways I have done in the past with other multi transistor final is same as D.S.Platt stated, but with a VTVM across the emitter and adjust the transistors equally. This unit is give me hard time. I though may be they are taking a voltage somewhere else?

>
I have a w32A and it is very good. One thing you need to know is that you should avoid using an external power supply as much as possible because the repetitive movement of the plug in the socket on the radio does damage to the socket. This is general for all radios, but it seems to be compounded in w32a because the jack is on top and is more susceptible to pulling from the chord which typically runs over the back of the radio. The thing is, when the damage happens, it causes a short which forces the radio to deploy its voltage protection and not turn on. This is just something which I picked up from this NG about a year ago. In essence, it is ok to charge the battery by the jack on the radio (drop in charger is still better). It is undesirable to use the radio with a chord plugged in tugging on the jack.

Date: 1999-03-14 00:00:00 UTC
From: Nedwek <nedwek@teleport.com>
Message-ID: <rJWG2.3796$A6.2365591@news1.teleport.com>
Source record: 113984

Hello,
Well, I'm taking my Tech Plus test April 3rd, and I'm all ready. What I'm thinking about now is a radio. What I will probably be doing is CW down to 40m and SSB on 10m. I was looking at the Kenwood 570D/S, or for what looks like a more advanced transceiver, the Yeasu FT-920. I'd love opinions on either of these radios, but what I want to know more is what used gear you'd suggest, based on my experience(none) and price range up to about $1500 for transceiver. Any info is appreciated. Also, what kind of antenna would anyone recommend? Simple dipole(s)?

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from
the crystals used in the conventional single channel
Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. If you wish to
purchase a new receiver with "Plectron-like" signaling
capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

Well, it's an Amperite 12V, normally open 75 second delay. You could use a longer delay, like 90 or 120 if a 75 second one doesn't show.

That rig with powersupply should bring $ 750.00-$850.00 in my humble
opinion.
It is a good rig but the tuner does not work on 160 meters....
I have had several and they seem to be good rigs.
Some will say its worth $ 600.00 because they want to buy it and some
will say its worth $ 950.00 cause they have one for sale..:-)
It all depends how bad you need to get rid of it... It would be a quick
sale at $700.00 but if you could hold out a while it would probly bring
$ 850.00 or so...
K5JOE
Just my opinion...

Has anyone used EVE to set a Euopean VX-5R? If so what soft links are safe to use? There is nothing with EVE to say which codes do what. I want to retain the European repeater shifts but get W/B transmit. Yes it is illegal but at low power into a 50 ohm resistor it is useful as a signal source.

Could be, but wouldn't the interference change in strength as I moved around? The Wx image was equally strong in several different areas which were miles apart.

Also, if it's cable interference, how would the Yaesu-supplied antenna block it so completely without blocking real signals? The Wx image was very strong with the other antennas and non-existent on the Yaesu-supplied one, while signals off nearby repeaters differed only by a few points on the signal strength indicator between the aftermarket antennas and the original.

Thanks.

So what's wrong with the IC-2100H? I have one and think it's a pretty good radio. Actually, it's a great radio when you consider the price. I also have the IC-W32A and think it's the best dual band HT going. Back to the 2100H, I also have an IC-2710 and think the 2100 challenges it in performance, especially considering the price...

If you haven't figured out that I like ICOM products, note that I also have an IC-756 for a little HF work.

Cheers,
KB3BYZ

4006. +++TONS of radio stuff for sale!++

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-14 00:00:00 UTC
From: Jim Rizos <jrizos@nac.net>
Message-ID: <36EC82FA.E43E225F@nac.net>
Source record: 114006

Hello-

I have numerous items for sale- Trying to clean out the shack! Here goes:

1 Motorola HT-440 4 channel VHF handheld radio with 3 batteries and drop in slow charger (Doesn't burn up the batteries!). In great shape! On the 150 split and has crystals for 154.430, 154.174, and 155.820 installed. Batteries are used but seem to hold a charge decently. $75 or best reasonable offer.

2 Motorola "Moxy" UHF mobile radios. 1 Channel models with one set of private repeater elements installed in the 460 band. I think the output is around 30 watts. One has a base microphone and the other has been modified for a removable mic that attaches to the side of the unit. Both work fine and would make fine 440 packet machines with some tuning or GMRS mobiles. In used condition, but not abused. Decent looking units. $70 for the pair OBRO

1 Motorola "Flip Phone" Has the center pin mod so you can tune it to cell phone calls or cover the pin or push it down and use it as a regular cell phone. Comes with 1 NiMh battery that holds a charge, two NiCds that seem to, and two dead NiCds. Rapid discharger/charger that has a small heat sink added to allow discharging of NiMhs without overheating. Phone shows some use but functions just fine. $ 50 for the setup

1 Mitsubishi cell phone with 1 standard battery, one high capacity battery, and a plug in wall charger. Phone has no antenna and is currently in locked mode. I believe it can be unlocked by a dealer. Phone is very slim and compact. Works, just locked
$25

1 Sonar 10/11 meter 60 watt amplifier. Just tuned for full 60 watt output. Don't Use this on the cb band though, that is illegal. Has two small tubes but they are in fine shape and the amp works perfectly. Looks cool too!
$80

1 Box of 17 GE Mastr portable Radios. None work. All will be DOA. No Batteries. Most are missing boards and front and back but you could probably make a decent mountain top repeater if you salvage the right parts.
$ 30 for the box

1 Box of roughly 65 boxes of GE mobile radio parts. Nearly all are NOS parts for mobile radios, all in the original 1 by 2 inch blue boxes.

Everything from relays to potentiometers. There may be a few used parts in there but not too many.
$30 for this box

OR: $50 takes all the GE stuff as one lot.

Will Definitely talk about the prices, This stuff just takes a lot of room up in my tiny shack, Plus, I am saving up for a Ft-50 from Yaesu. Please do not hesitate to make an offer- jrizos at nac dot net is the email. Thanks A Lot!!

Greg Rizos KC2EJB

>My transmit audio is way too low.
>Thanks much & 73,
>Jeff McDowell, N0WCF

The deviation on the FT-8500 is adjusted separately for the VHF and UHF bands. It is done through the firmware in the rig and the FS-10 mike controls while in the calibration mode. To properly adjust the deviation, you inject a 50mv signal @1000 hz from an AF generator into the mike jack and while transmitting you use the mike joystick to adjust for 4.5 kHz +/- 100 Hz deviation.

This info is in the factory service manual, as well as many other useful details about this rig. Since so much of the alignment and calibration is done via firmware, it would be a good idea to obtain a copy of the service manual if you plan on working on this rig yourself.

Sorry to see it, but the internet has taken HTYS's place...I was wondering how long it'd take. My gripe with the Yellow Sheets was the east coast guys seemed to get their issues before us out here on the west coast and by then all the bargains were gone.

I appreciate Fishbags and K4SQR's encouragement. But my question is not about Alinco's health (personally the answer is obvious from info I was told re JA economic journal 3/13/99. Their show up at hamfests wouldn't change my opinion).
Back to my point: Anyone knows an alternative service point "just in case"?

Source record: 114040

I have to ask: TechAmerica has the Alinco DX-77T for $649. The auto antenna tuner is $299. The rig is a full 100 watts on CW/SSB/FM. What is wrong with the unit that it is so darn inexpensive? I am in the market for a affordable HF rig and tuner. I may be comparing a Lincoln to a pinto, but I have been looking at the Icom 746 and almost sold on it until I saw the Alinco for hundreds less. I have a 2/440, 6 meter in the house so I am not worried about those bands. All opinions are welcome.

The Collins mechanical filter DOES help the transmit audio, and having
heard the result, would recommend it. However, if you've decided to only
buy one filter, I agree that the Rx side would be the better place to
put it.

Chris,

:)))))))))))))) Clint, not again PLEASE :))))))))))))))

Clint, I have the ADMS 1D and am very happy with it, I did not
have any problems with RT Systems support ever.

Clint I do not want to argue with you as the other people do.

But it is to obvious that you like RT Systems unusual TO MUCH.

I know you will say again: "Great Software, Great Company", yes
yes ok, but there are a lot of Great Companys with great Software
but you are menshioning only ADMS and RT Systems again and again,
and only: Buy, Upgrade, only 20$, Free Support line, even when
people are asking something else.

Clint, it is VERY funny, and 99% of the people I am talking
are CONVINCED you are working for RT Systems or are Rod's
best friend.

It is funny that RT Systems makes advertisements that way.

Please do NOT try to convince me any further that they are
the best company and have the best Software and the best
support and you are not working for them, nobody belives
you any more, you have gone to far :))))))

PLEASE !!!!!!!!!!!!!!!!!!!!!!!!!!!!

Clint, it IS VERY FUNNY, i don't understand how you can't
see it :)))))))))))))))))))))))))

Greetings Clint, and please do not answer this EMail.

Sadly, HTYS is a victim of newsgroups like this one. They filled a niche in the days before the internet evolved into a household utility. They were THE source of used equipment listings back in the "old" days. Someday hams of our vintage will be able to tell our grandchildren that before the turn of the century they used to mail out sheets of paper with ads printed on them for used ham radio equipment. Unfortunately, they'll probably ask what was ham radio?

Wow, does that bring back memories. I was 16 years old, and working part time at a grocery store when I ran into a fellow that owned the TX, RX and Band Scope. He was getting ready to move out of state, and was willing to sell. I was working diligently to purchase said same, when that fateful day came and someone else bought it out from under me. Such is life...

For those of you who have never seen this setup, it was the greatest looking groupings of equipment. Loved that electric QSY'er. One button instant dial spin.

Good luck guys.

Has anyone used EVE to set a Euopean VX-1R? If so what soft links are
safe to use? There is nothing with EVE to say which codes do what.
Richard

4046. Capabilities of Kenwood SM-220/BS-8

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-14 00:00:00 UTC
From: Mark Hall <markeh@erols.com>
Message-ID: <36EB96B4.EFB04E35@erols.com>
Source record: 114066

Hello Group:

I'm looking to buy a SM-220 with the BS-8 Bandscope adapter for contest/DX work on CW. Wondering if it's possible to find CW signals over a reasonable bandwidth (say 50KHz) using such a setup. Relative to this application is the achievable sweep rate, scan bandwidth, and scan resolution. Any information would be greatly appreciated..

thanks '73 KI4Z

Many good responses but here's my take:

First Things First:

1) Get a transceiver with a Great Receiver section. Get Every filter Option in both IFs. It's got to have IF Shift, Passband Tuning and Notch. All are sensitive enough, it's the dynamic range and birdies that nail you. You have to hear them first. Transmitter section doesn't matter as long as it's clean enough and doesn't bother the neighbors when followed by an amplifier. Budget $1K on the used market

2) Get a Beam at a reasonable height of 40'+. At least 3 element Yagi or even better, a Quad. Helps greatly on receive too.. that's why this is #2. Higher the better, but the cost goes up quick. Budget $400 on the used market.

Now that you can hear them.. crack the pileup:
3) Get some Hiking boots.. Budget $500 on the used market for a Heath SB220 or similar twin 3-500 amp. Not great but will do the job.

That should get you known on the band.. maybe a tad over the $2K budget.

Start your own country on a Mountain island in the Indian Ocean and you'll own the band. This is worth >20 dB of signal.. make them listen for you.. let them spend their money.

For the rest of us:

Mortgage the house, get a second job, unload the wife and kids, add about 40 feet, three more elements, some hard line, go to Charm School, Add some spikes to those boots, move to a shack on a iron ore rich mountain top.....

4048. WTB: Kenwood TS-520 accessories - particularly DG-5 display

Hi

I'm looking for any and all accessories designed specifically for the TS-520 series radios - in particular I'm after a DG-5 digital display, external VFO, external speaker unit, W.H.Y.

Will pay your price + carriage to UK for good-to-excellent condition units.

Thanks in advance :-)

Mike Swift

Source record: 114075

Im a missionary in Kazakhstan and am interested in your amplifier. IS there any crucial info in the manual that you remember or is it basically plug in an us. How critical is the swr on the antenna?? I guess a tuner would solve that.

Im currently in Redlands CA for Mission Aviation Fellowship training and will be in Dallas on Mar 26th to Mar 31. If we can agree then I could send you a check or you could COD to my Rowlett address.

What is the least you would consider taking for the amplifier. Im pretty strapped on funds and hoped to find something for about $400.

My call is K5KWG since 1961 but have been
ZA1MH for the last 5 years and am currently
UN7/K5KWG.

Please let me know if you would consider $400 for the amp and we can arrange shipping if that is possible.

Thanks for your consideration

Mike Holman

From: "Charles M. McKinley" <baroque@visi.net>
Message-ID: <36EBE61D.7B0A18A@visi.net>
Source record: 114093

Hi folks,
I need a part for a Heathkit IO-10 dc scope, specifically the
5 Kohm pot that's piggybacked on the back of the vertical gain
switch/control (part # 63-201 for those of you crazy enough,
like me, to still have the construction manual.) If you're familiar
with this scope, you know there's absolutely no space left
anywhere to mount an outboard pot, so I don't have much choice
but to find an original equipment replacement. Does anyone know
whether Heath still has any sort of parts repair service? Or, does
anyone have one in a junkbox for cannibalization?

Thanks in advance,

Chuck McKinley
Newport News, VA

PS If there's a better newsgoup for this, I would appreciate a pointer.

>the FT-920.

Are you sure you have an FT-920? The 920 does not do 2 meters. Also, it is not a dual receive, you cannot listen to two different frequencies at the same time. It is HF plus 6 meters only, (and it has a dual watch function which will switch from one frequency to another and back at a programmed interval).

Well, not quite the same problem, but I have experienced BC stations severely overloading the front end of my Icom R9000. This problem was solved by a Industrial Communications Engineers model model 402X broadcast band filter. Broadcast stations that were >60dB over S9 on direct frequencies dropped to S8, and harmonics disappeared.

I have never noticed the problem with my 1000MP, by the way.

I have found some of these excellent 6B4G valves. 6C4C in Russia is
equivalent to 6B4G and it looks identical to the old Sylvania 6B4G
with double anode stapped together by a metal plate, not the type with
two separate anodes. The 6C4C valves is very well built and give you
an impression of high quality. It is unlike the new Sovtek 6B4G which
looks like a scaled down Sovtek 300B with a single anode.
E-mail me if you are interested.

Best regards,

Try Hosfelt Electronics in Steubenville, OH, they have male and female both chassis mount and inline. The inline style is really useful for building adapters. Their prices are hard to beat, too!

Yes, ignorance runs rampant on the Internet. Folks continue to prove in their posts that it takes no IQ test to access the Internet.

Tell ya what - you go ahead and promote YOUR products on your site. Leave those with first-hand experiences and straight-from-the-source information alone. As you have written, there's a lot of misinformation being spread around by folks with questionable motives....

Tony,
Sounds like you might have blown out your prom chip. You can find a parts radio and try the swap but you'll probably end up sending it back to Kenwood if your local shop doesn't want to help. I had a similar problem but luckily my local shop had a good tech and a parts radio to swap from.

This message is for those of you that stay off of ebay...too bad, there's great stuff on there. Here's the description of the 75A-4 I put there.

Collins 75A-4 Amateur Radio Receiver with matching speaker. Works great! Using just a simple wire antenna, it pulls in distant stations with crystal clarity. Tube set from the late 1950's. Proceeds from sale go to Seneca Radio Club W8ID Field Day Tent Fund.

After the description are plenty of great photos. Please go and see them.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=77736556

Happy bidding.

From: k4sqr@aol.com
Message-ID: <19990314145839.18131.00000669@ng110.aol.com>
Source record: 114115

The FT-100 on display at the Charlotte, NC Hamfest this weekend leaves a lot to be desired for $1450. + - range. The two antenna Pigtails are about 10 inches long with c-r-i-m-p- type connectors!
The detachable front panel had an intermittent when the xcvr was slightly moved. No dealers at the show had any to sell; most in Customs per Yaesu personnel.
I believe the 706MKIIG has chassis type SO-239 connectors.

Based on comments, the Icom will have the lead for a while until the FT-100 is out for a period of time.
Probably 6 mos. before a Review of both are conducted.
Good Luck

Offered as a package deal only.

Have (10) Standard UHF (438-470 MHz) portables.
Model number is HX241U. They are 12 channel with
a numeric disply, scan, lighted display and more.
These radios are in excellent condition and recently
serviced. I've sold a bunch from this lot already. I need
to move them out for more inventory. They come complete
with:

- (10) antennas
- (2) six-unit chargers
- (10) speaker mics.
- (7) belt clips

There are no batteries with the radios. I do have sources
for the batteries, but I don't sell them. I'm offering everything
for $ 650.00 plus shipping.

Thanks!
Rich

clintbrad4d@earthlink.net schrieb:
> Tell ya what - you go ahead and promote YOUR products on your site.

:))))))))))))))))))))))

Clint, I am a Civil Engeneer and I build Houses in Germany, I work
in a 5000 employees company, I am promoteing my products on a
diffenent way, not over the Internet :)))))))))))))))))))))

We build VERY big houses Clint, a part from the Frankfurt airport
(the largest in Europe), the BFG Bank (45 floors), ...

I am good payed as the Director of the German Headquarters
from our company, and I do not need to make more money :)))))

I write Software for FUN and for MY OWN, as a nice citysen
on planet earth, I am shearing my Software with anyone that
likes it, not only for HAM radio.

It is NOT even shareware, not even CARDWARE it is FREEWARE.

And I answer to EVRY EMAIL sended to me, and belive me I get a LOT.

Not everything is about money and products, some things are
done for fun only, and the HAM's are HAM's for fun, and
not to make money with there Hobby.

> Leave those with first-hand experiences and straight-from-the-source
> information alone. As you have written, there's a lot of misinformation
> being spread around by folks with questionable motives....

:))))))))))))))))))))

Tell me more about the "straight-from-the-source" :))))))
if it is so, then the RT Systems folks are very bad programmers,
I have no sources from Yaesu or Icom, but please take a look at
some Software I have written, the IC-Q7 programmer from
RT Systems have implemented only 50% the stuff I have in
my IC-Q7 Software.

It's good then HAM's have started to play with the PC also.
Just take a look around, Freeware Software for the
VX1R,FT50R,VX5R,IC-Q7,IC-R2,IC-R10,... the list is growing.

And these Softwares have not such limitations as the
RT Systems Software has, for example the cellular frequences
entering, I live in Europe and we can listen to EVERYTHING
here, that 800MHz Frequency disable is nerving me all the

time.

In the meantime a lot of circuit shematics for a simple
Half-Duplex RS232-TTL converter can be found on the net.
For just 2-3 USD you can build one, that will work
with VX1R,VX5R,FT5x,FT4x,FT1x,FT8xxx,FT3xxx,IC-xxx,

An some other thing, I could never Understand why RT Systems
is selling 2 packages, ADMS1D and ADMS 2D, it is absolute the
same Hardware, you need just a extra adapter.

Well, if RT Systems want to sell there Products, they will
have to make things better, yes yes, thats competition :)))

And you know Clint, I have leave RT Systems alone.

But I thing your bahaivor is not fair, so to avoid misleading:
I have copyed a Shematic Diagram for a 3 USD Half-Duplex
Interface in my Clipboard. On every advertising you made,
I will answer with the Shematic of the 3 USD interface
and links where to download FREEWARE Software.

And Clint, I do NOT belive RT Systems VX5R Software
will be better the EVE.

> - Clint Bradford

Greetings Clint :)))

Source record: 114123

Yes, there is probably a pack that will take AA's for most HT's. I have had good luck cutting open the dead battery pack and replacing the batteries. Some rewiring and soldering and epoxy to glue the case back together. Most use common batteries available with soldering tabs at electronic and similar type stores. I am currently rebuilding one for an old Apple laptop computer. Doesn't matter too much about the battery type, just high capacity and correct voltage.

Hi Dave,

The older adapter cable has a 3.5mm stereo plug identified but a
base, a ring, and a tip connector. The FT-50 VX-1 VX-5s all need
an adapter from the 3 connector to a 4 connector identified by a
base, 2 rings and a tip. The 3 connector plugs into a shot cable
with this connector on the end. Since RT Systems has a policy of
only selling their upgrades with the adapter and since many folks
already have the adapter you might be able to buy one from one
of these folks.

A most interesting place the internet.
For a few dolars you can make as much
of an ass of yourself as you want.
Some folks seen to get a lot for the money.

4112. IC-706 MK II G PRICE $1399

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-15 00:00:00 UTC
From: dlr18sh@aol.com
Message-ID: <19990315171006.28235.00001110@ng31.aol.com>
Source record: 113882

While browsing the HRO webpage I see the ICOM 706 G model price is $1399 and the Yaesu FT-100 is $1349. I'm sure prices will vary a bit but this is to give you an idea the Icom will be $50 more. It makes sense as the ICOM has more experience in the 706 type of radios but who knows. I just wanted to let you guys know.

> IFs.

Yes, but for the comparison that the original poster requested, both the
IC-751 and the TS-850 were reviewed with the same 500/250 filter
combination, so the numbers were apples-to-apples in that sense.

In terms of basic performance at least, I think the 706 would be a step down for DXing use. I'm not knocking the 706 per se, in fact I have one and like it very much, but as a DXing rig there are many better choices.

Source record: 113897

I have an oppty to buy a 940S from a silent key estate sale sponsored by my local AR club. It was recently aligned and serviced and in ex. working condition. It does *not* have the auto tuner (a minus) but I there is a station monitor scope I might be able to deal for (a plus). I can get the radio itself for $800. What is the collective opinion? is this a fair price? Of course, it
would be sweeter if I could get the SM for a few $ extra. Could someone here familiar with vintage Kenwood give me
an honest appraisal? Is $800 fair for the
radio alone (especially since the radio is 13 years old and many "entrance level" rigs can be purchased new for slightly more that $1,000 (and they would have the built-in AT)??
Thanks for your opinion.

Brandon,
I would agree with both Bruce and Rudi. The "latest" rigs are not always the "greatest". I looked at the TS570D/S and there is one dial that controls about 25 different things depending on the menu settings! That could get real confusing. IMHO the new radios have gone overboard with memories, menus, etc.
The 520S is a good choice and you can get one for about $300, but it does have tube finals (in many ways a plus) but it does have to be tuned (and re-tuned). The 440s or 450s would be an excellent choice...solid state, no tuning, some memory functions (useful) without going overboard.

I have a w32A and it is very good. One thing you need to know is that you should avoid using an external power supply as much as possible because the repetitive movement of the plug in the socket on the radio does damage to the socket. This is general for all radios, but it seems to be compounded in w32a because the jack is on top and is more susceptible to pulling from the chord which typically runs over the back of the radio. The thing is, when the damage happens, it causes a short which forces the radio to deploy its voltage protection and not turn on. This is just something which I picked up from this NG about a year ago. In essence, it is ok to charge the battery by the jack on the radio (drop in charger is still better). It is undesirable to use the radio with a chord plugged in tugging on the jack.

I have an R4C for sale. It is serial #18653. It has the 5 position filter switch as does all of the late R4C's. It is in real nice shape an easy 9 of 10 and works great! I am asking $225 plus shipping. I can accept VISA and MC as payment.

Hello,
I am considering the purchase of a IC-2710 with the MB-65 and MB-58 options. How tall of a mount is the MB-65? Is it comparible to a standard cell-phone cradle mount? I'm wondering if it's tall enough to be easily viewed when mounted on the center hump of my dodge pickup. Any information / suggestions will be greatly appreciated. Please respond directly to peaster@connors.cc.ok.us.

Thanks & 73's

>antenna.
>it is a thin spaghetti type antenna and very flexible.

Other alternatives:

Comet SMA-503 is a thin whip like the SRH519 above, but the matching
network at the base of the antenna is fatter and shorter - even less
chance of damaging the connector on the radio.

Comet SMA-3 is a thicker antenna, but still a bit thinner and a lot
more flexible than the Yaesu stock antenna. However, the matching
network at the bottom won't bend, and it's about 3 inches long,
so if it gets caught on something it has more leverage to damage
the radio's SMA connector. It works really well, though.

>programming cable.
>The question is, is there a physical difference in the cable made by RT
>systems between the ADMS-1B and ADMS-1C or D?

Yes and no.

ADMS-1B (and 1A for all I know) comes with a cable containing the
necessary level converters, and ends in a 3-circuit plug. This is used
for programming the FT-50 via the phone jack.

The FT-51 has a 4-conductor combined mic/phone jack that is incompatible
with the FT-50, and ADMS-1C comes with an adapter that has a 4-circuit
plug on one end and 3-circuit jack on the other. To program the FT-50,
you plug the adapter into the FT-50 and the cable into the adapter.
To program the FT-51, you remove the adapter and use the cable, as
before.

So, you're missing the little adapter, but if you can find one the
cable you already have should work with it.

any opinions on whether this would be an improvement on HF

It would not be an improvement on HF, unless you wanted the built in keyer. QSK is good on the 450, not so good on the 706. Get the 706 and see how you like it. If you get a good deal on a nice used one the experiment shouldn't cost a thing if you change your mind.

Might I suggest a used Kenwood TS-130S? WARC bands, runs off 12 VDC, small/lightweight, and as far as I know, has never had a factory service bulletin issued on it. See if you can get one with the 1/2 KHz CW filter if you're planning any serious CW. These usually go for less than $350 and you can put the remainder of your money into a serious antenna system. If you get into SSB DXing, you can buy an external VFO to split T/R frequencies. You'll also need a 12 VDC supply capable of delivering 20-25 amps or use a storage battery with trickle charger.

Message-ID: <279312660382205NEWS2LX@news.scott.net>
Source record: 113930

I have a GRE Super Converter II that converts 810MHz to 912MHz down to the 450MHz range (yes it allows older scanners to do cellular if you are so inlined, even though it's illegal). It has a female BNC on one end and male BNC on the other so it happily connects to tthe top of a handheld scanner. It is powered by an internal 9 volt battery or can be powered through a DC jack that is built into the unit. I have used the little unit for years, but since I now have a 800MHz scanner I no longer need it. It functions FB, but some of the paint is chipped off of it, but functionally it's in 100% working condition. The unit measures 2-5/8" tall X 1-1/2" wide X 1-3/8" thick and sits on top of a handheld scanner FB. If interested email me an offer.

4154. Re: ADMS Software

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-15 00:00:00 UTC
From: kb0vof@my-dejanews.com
Message-ID: <7ci9uq$3ul$1@nnrp1.dejanews.com>
Source record: 113932

My unsolicited 2 cents: I think US$20 for a mere upgrade, 50% of the original cost of the complete set of software and cable, is too much. If one had purchased the ADMS 1C, then upgraded to 1D, and now to 1E, they will have paid $80, or twice the (probable) cost of 1E when it shows up. That says to me that RT is not as loyal to long- time users as it apparently expects us to be. They make a good product, but the price is too high for me, especially for just one radio. I'm happy with the available freeware, and thanks, Goran, for your help in that area. I also have a Q7 and love your software for it. As you say, competition makes a better product!

If you have the funds to be able to choose between a 145/245 and the NRD-525, avoid the NRD-525 (which, by the way, also has a tracking front end). It's an equipment generation or two earlier than the 145/245 and shows it in a number of areas that are quite critical if you're going to listen to a radio with headphones for hours and hours. (I reviewed the NRD-525 for QST and participated in QST's JST-245 review.) In particular, the NRD-525's AGC dynamics and gain-distribution engineering were poor, resulting in AGC pops and distortion on strong signals in SSB and CW. (Read its operating manual carefully, and you'll see that users were encouraged to end-run this poor engineering by turning down the radio's RF gain control in the presence of strong signals--something that should not be necessary with proper AGC/gain design.) The JST-145/245 has steller audio (made possible by just about perfect AGC dynamics and a hiss-free output chain), more selectivity options (and better selectivity is achievable overall as a result of the availability of channel-width filtering at two IFs [9 MHz and 455 kHz]) a smoother synthesizer and much better ergonomics.

Richard,

Why don't you save yourself some money and buy a clean used rig? For a lot less than you are paying for NEW equipment you could buy a TS520, for example, doesn't cover the WARC bamds but you didn't include them in your list. Puts out a FB 100+ watt signal CW and SSB and you can sell it later, if you want, for nearly as much as you have in it!

4161. small battery for Relm HT?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-15 00:00:00 UTC
From: laird@fairway.ecn.purdue.edu
Message-ID: <7cj2vglnb1@mozo.cc.purdue.edu>
Source record: 113939

I have a couple of Relm HTs with the 700mAh (BP007) batteries. I'd love to find a much smaller battery, but I've had no luck.

It seems that with all of the new battery technologies (NiMH, Li, ...) there should be a way to get 10.8V from a much smaller package. (My little notebook has lithium batteries that are much smaller with the same capacity.) I wouldn't even mind losing a bunch of capacity to get the size down.

Are any aftermarket batteries available for the Relm? I'm even considering trying to make my own.

Thanks.

Andrew:

I own a 756, nice radio. The radio has a excellent receiver. The dual passband tuning is very good. I use a 500hz CW filter with the dual PBT, very good. The first radios had some IMD problems but were fixed starting at serial number 1900 and above. The audio on receive and transmit are excellent as well. And of course the band scope is a nice addition to any radio, you will tune around the bands differently because of the scope. The gripes are as follows:
1) LCD screen could have better contrast.
2) Preamp & attenuator do not track per band
3) DSP & DPB tuning functions do not work on AM

There is a rumor (aggressively denied by Icom) that a 756 Pro with a color LCD screen & 2 meters (with other additions) is on the way...maybe introduced in Dayton in May. Designed to compete with the 1000MP (performance & price).

Sean - K3XT

> front end). It's an equipment generation or two earlier than the
> 145/245 and shows it. Dave Newkirk, W9VES

Dave,

Your assessment has been echoed by several other users who have
done quite extensive comparisons in their own shacks as well.

It sounds to me as though the best price-performance option is for me
to forget 6m (included with the JST-245) and go for a used JST-145 (but
with the autotuner option).

I am hearing that I can get a JST-145 for about $1100.- $1250. whereas
a used JST-245 runs $1600.- $1750. (depending on filters and other
options).

My most critical application is for emergency and missionary
communications,
often under less-than-optimal conditions, especially at the other end.

My greatest concern about the JST-145/245 is that 115vac is required
rather
than 12vdc (13.8v), thus adding a noisy and inefficient inverter to my
backup power
system during portable and/or commercial-power-loss conditions.

It is the 115vac versus 12vdc power source issue that will cause me to
hesitate
and to consider discrete rx/tx units that are 12vdc powered. Relocating to
Florida
and concerns about lightning protection are driving me to think-simple (the
fewer
cables the better) and that means transceiver rather than tx/rx ... Hmmm.

Thanks for your information and recommendations!

4165. ??? General Radiotelephone Company model VS-2 CB ???

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-15 00:00:00 UTC
From: k5dh@raytheon.com
Message-ID: <7cj4t1$rn@news.rsc.raytheon.com>
Source record: 113943
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.cb

I picked up a General Radiotelephone Company model VS-2 CB radio at a surplus shop the other day. It's a tube-type, crystal-controlled, 5-channel, base/mobile transceiver with a built-in power supply (with transistorized multivibrator for mobile use), and a Nuvistor front end. It's very small, about 4-1/2" tall, 6-1/2" wide, and 12" deep. No frills, just volume, squelch, channel selector, and a power-on neon bulb. The transmitter works, but the receiver doesn't yet (several bad tubes, replacements on their way).

Does anyone have any information on this set? Was it made by the same company that now goes by GenRad? Was there ever a Sams CB Photofacts manual on it? When was it made? So many unanswered questions...

The surplus shop had two other General Radiotelephone models there, same size and shape but with a "local/distant" switch and a "CB/bullhorn" switch on the front panel. I may go back and grab them also, if I can get this one percolating right! They might be interesting 10m a-m transceivers, eh?

Thanks in advance for any help you can provide!

73,
Dean / K5DH

> will be better the EVE.

That's a great thread subject - a head-to-head comparison between the new RT
Systems ADMS release for the VX-5R (and other HTs) and the .EVE program.

Well, what we really need, IMHO, is a head-to-head comparison of the two programs!

Personally, I do not mind spending twenty bucks for an Upgrade that covers entirely new ground, as the new ADMS does with the VX-5R...

4170. German WW2 equipment

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-15 00:00:00 UTC
From: "Ralph R. Thadeus" <slhapur1@inlink.com>
Message-ID: <7cj6fp$97n$1@news1.inlink.com>
Source record: 113948

Are there any hams out there that are familiar with the type of equipment use by German WW2 intercept stations. I have a copy of a 1995 German newspaper article about the German Lauf Intercept Site showing two receivers which I am trying to identify. Lacking that, was German equipment, as produced, limited to small band widths unlike our Hammerlund's that covered all bands.

Steve:

I think you may be jumping the gun! The TS450S/AT is a GREAT rig for the money.

If you are AT ALL thinking about working HF (great fun, talking around the planet), then consider keeping the rig and working on your "Tech Plus" ticket. You'll thank yourself for the foresight of having a rig "ready" for you as the reward.

Trust me, 5WPM is about 1 weekend of concerted effort, and the theory is very similar level to the Tech stuff. Not really a big deal.

GO FOR IT!

2 good "bang for buck" choices for me are the Kenwood TS450S/AT ($700-$800 used) or the TS50 mobile ($650 used).

If purchased in great shape and taken care of, they will depreciate very little. Then you can "trade up" later to something fancier once you know more about what you want and have more familiarity with rigs and options.

Hi folks :) I'm an electronic musician *seriously* looking for the following musical equipment, in any condition, even broken:

-OLD SYNTHESIZERS (from the 60's-80's)
-OLD KEYBOARDS (w/ knobs or sliders)
-OLD DRUM MACHINES
-OLD SEQUENCERs (w/ knobs for each step)
-OLD VOCODERs ("robot-voice" sound)
-MODULAR PATCHABLE SYNTHESIZERs
-RACK SYNTHS
-INTERESTING EFFECTS and anything related to the above.

http://members.aol.com/rolandman1/index2.html

-Moog, ARP, Korg, Roland, Sequential Circuits, Oberheim, Yamaha, EML, Electrocomp, EMS, Synthi, Putney (VCS3), RSF, Buchla, Serge, Polyfusion, Ionic, Paia, SMS, Wavemaker, E-mu, Steiner-Parker, Chroma, Aries, etc.

-Roland TB-303 Bassline
-Roland TR-909 Drum Machine
-Roland TR-808 Drum Machine

-Simmons SDS-7 + SDS-5 + SDS-6 Drum Brains and Sequencer
-Pearl SY-1 Syncussion
-E-mu SP-1200 Sampler Drum Machine
-Sequential Prophet VS rack
-Oberheim Xpander
-ARP 2600

If you have any of the above OR SIMILAR for sale or know someone who might, please email me at rolandman1@aol.com and include phone number as well if you'd like.

Thanks in advance and apologies if this post annoys anyone.

No Clint, you are turning things around, you are spamming
the newsgroup all the time, everyone can take a look at dejanews
and see the evidense, companys are not allowed to spam,
so you are doing that for them, consider my statement
as antispamming, I have tried with beeing nice, but if
you want it this way, no problem, just continue ...

And if you claim, a information how to save 40$ is
spamming, you are wrong.

And Clint please answer me a question, as a RT Systems insider:

You claim:
> Tell ya what - you go ahead and promote YOUR products on your site.
> Leave those with first-hand experiences and straight-from-the-source
> information alone. As you have written, there's a lot of misinformation
> being spread around by folks with questionable motives....

Tell us Clint, how come that.

1. IC-Q7 programmer was released before RT Systems even know
that is clonable.
2. IC-R2 programmer was released months ago, and RT Systems
still with: "comming soon"
3. EVE for the VX5R was released months ago, and RT Systems
NOT EVEN with "comming soon"

That does not seem like first-hand experiences and
straight-from-the-source.

If RT Systems has first-hand experiences and straight-from-the-source,
then they are so bad programmers that they can not write the Software
on time, even with first-hand experiences and straight-from-the-source
information's, they are always a step behind the reality.

And we all do NOT have "first-hand experiences and straight-from-the-
source informations"

You don't understand the newsgroup, it is not for advertising,
it is to help people to find informations, 15 jears ago when
I have started programming as a little kid, there was no
way to get informations, it was a hard time. I am very happy
things have gone this way, more then 50% of the informations
I get are from the Internet.

And what happens now, I offer help to someone, to make a
cheap interface, I write Freeware Software to thank people
that have written similar software that I am using, and you
acuse me with "a mature tactic"

Clint, I am very sorry, but I thing you don't belong here,
ADMS and RT Systems can be found via Yahoo and Altavista,
I have sarched dejanews a little, I have not not seen
anything from you besides: ADMS buy, upgrade, just 20$.
(and some stuff about JFK)

So you are no help to anyone in this newsgroup.
If you want to help RT Systems, then stop this
and i will not make any antispam measures.

Dipl.-Ing. Goran Vlaski

4186. Kenwood 79A and extras for sale!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-15 00:00:00 UTC
From: framix@aol.com
Message-ID: <19990315122533.12084.00001338@ng-cg1.aol.com>
Source record: 113964

I have for sale my Kenwood 79A 2m/70cm DualBand HT
with many accesories.....

Here is what I am selling......

Kenwood 79A (Original Model) in original box with all
that came with it. Rubber Duck, Wall Wort transformer,
user manual. It comes in the original box and it is in
really great condition. This radio is a solid 8.5 or 9
condition. The radio is used, but shows no signs of
major wear etc, it is in super condition. You will
really be a proud owner with this rig.

I am also including the Kenwood KSC-14 dual bay rapid
charger for the batteries that go into the 79A (and some
other Kenwood HTs) It is in #9 condition also and comes
with users manual in original box.

Kenwood Handmike for 79A and similar radios.
This is the handmike with program buttons on it.
This unit is nice, I would say a solid #8 condition.

AA battery case for 79A in great shape BT-9

Swivel Belt Mount for 79A model # BH-6 in #9 condition.

Comet SH-55 DualBand 2m/70cm Foot long rubber duck higain antenna
in fine shape. This is a BNC mount and fits the 79A

ANLI AL-800 Telescopic 2m/70cm DualBand HiGain antenna in
great shape also, and yes it fits the 79A also.

All of this gear is in great shape without known defect.
The only item that is not original is the battery pack that
will be in the 79A, it is an original pack PB-33 but I had
it redone by the NiCad lady into a NiMH 6 volt 1500Mah unit.
That actually makes it better, however I have not used the KSC-14
to charge this battery, I have used another MAHA charger more suited
for NiMH charging. I believe the KSC-14 is more for original NiCad
type batteries.

I am selling this entire package as a set and will not break out
any of the items for sale by themselves.

Some of the features of the 79A HT are as follows......

Dual receive on 2 bands
DotMatrix LCD display

7 character alpha numeric display
82 memory channels
DTMF memory for autopatch
Wireless cloning to a similar radio
PL encode/decode
Remote control of 742 type radios.

Ok, now the price.....
I am asking $280.00 for the entire package (plus reasonable shipping costs from Los Angeles)

Please let me know if you are interested via email

73 for now.....

4190. Better Dual-Band Duck with SMA connector?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-15 00:00:00 UTC
From: dgravatt@falcon.cc.ukans.edu
Message-ID: <7cjmkmbgb1@nnrp1.dejanews.com>
Source record: 113968
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment

Our RACES group recently purchased some Yaesu FT-50RD radios, which are nice little units. The stock duck leaves something to be desired, though. In looking through my AES catalog for a better model, I couldn't find anything longer than the stock 8" duck. I realize the little SMA connector can't take the abuse a BNC can, so the antennas are bound to be a bit smaller and lighter. Does anyone know of a longer SMA dualband duck antenna with better gain than the stock duck? SMA-to-BNC adapters probably aren't a good idea, since we use the radios in the woods where there are lots of branches to catch the antenna.

Thanks in advance for all help; email replies to dgravatt@falcon.cc.ukans.edu

Clint,

I will admit that I should have made a backup, but hey, the entire notebook case (disks, hardware, computer, external modem, etc) got crushed, so I guess that wouldn't have made a difference.

The fact is that I was looking for a cheap solution to my problem, $20 isn't bad, and I think you pushed RT a little bit too much, however FREE beats $20 in my book any day.

4208. 8500 mic audio

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-15 00:00:00 UTC
From: Dennis <No_Spam_n1kcl@worldnet.att.net>
Message-ID: <7chqj3$lrf@bgtnsc03.worldnet.att.net>
Source record: 114024

This is for the person that had a deviation problem with the FT 8500. I don't know where the pot is or if there is one in the 8500, but if your using an FS-10 mic you can increase the audio output by drilling a 1/8" hole just to the right of the audio input holes. Once you remove the face of the mic, you'll see why very little audio from the original holes makes it's way to the mic.

Hope this helps
Dennis

Try writing a letter (or email) to the "powers-that-be" at RT Systems. I would hope they would see yours as a real bizarre, unfortunate circumstance.

BTW - is a VX-5R in your future, by any chance?

> The fact is that I was looking for a cheap solution to my problem, $20

The .EXE program that is being used by several in the VX-5R mailgroup is getting more and more excellent raves every day. Since you already have the cable (I think you said you did), you might want to give it a try.

- Clint Bradford

4211. 8560-AS Eimac tubes F.S.

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-16 00:00:00 UTC
From: tubecntral@aol.com
Message-ID: <19990315201932.09211.00001268@ng-fd1.aol.com>
Source record: 113777

Hello, I have SIX new 8560 AS Eimacs for sale, made a few years ago, never used. 3 are in the original boxes, 3 had lost theirs , but are definitely unused, and come with a copy of the original documentation.
60.00 for the boxed ones, 50.00 ea. for the others,
INCLUDES ALL INSURED SHIPPING, in the Continental USA.
Thank you,
Joe Pratt, Tubecntral@aol.com

I had them both. The 920 is a toy compared to the Icom 756. If you're just shopping for price, buy the 920. If you want quality and performance, get the Icom 756. It wins hands down.

I agree. If you buy a new radio at some of the BIG HAM DEALERS and try to return it they give you a hassle and charge you a 15 % restocking fee. They often tell you to ship the radio to Kenwood/ICOm Yaesu for service even if the radio broke in ten days. At Radio Shack you get 30 days NO QUESTIONS ASKED. One of the selections on the computer for the Radio Shack Salesman is "
DOES NOT SUITE CUSTOMER NEEDS"

Given you are after HF performance, and from your email address "cwdxer" place a lot of weight on CW I would stay with the TS-450. You can add excellent CW and DSP performance by adding a Timewave DSP-599zx to the station.

Me too Clint, me too.

Tell your advice, I will tell my.

It is always good to have a second opinion, so we will be
a nice team, you with the advice were to buy, I with the
advice how to build.

Let the user decide what he/she will do.

Hello Michael:

There are several choices in the field today. I would opt for a DSP based decoder. You can buy a used PK-232MBX and upgrade it to a DSP front end. The PK-232 has a signal Identification mode that is very handy for "breaking" non-ham digital communications.

If you are patient, The PK-232/DSP will be available new before Dayton, Check http://www.timewave.com for more data.

Check out http://www.megalink.net/~n1rct/dxcc/vp9story.html for a description of DSP in action.

What are you talking about ???, do you want to say that we have
got our VX5R and IC-Q7 and IC-R2 from the stores
"Six months before the supported product hits the streets"
hahahahahahahahahaaaa

IC-Q7 was more then 6 months on the street, and nobody new
it is clonable, thanks to www.hamradio.cz RT Systems find out,
yes Clint, THEY have EMailed to RT Systems that it is possible.
That is your "first-hand experiences and straight-from-the-source"

And Edward T. Grant and Jose.R. Camara have got the VX5R at least
the same time as RT Systems, or even later.

> There IS a difference between "hobby-ware" and commercial products. Commercial

4225. FS: 2m Copper J-Pole Antennas

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-16 00:00:00 UTC
From: martyt@pobox.com
Message-ID: <36edcf61.343094001@news.supernews.net>
Source record: 113791
Cross-posted to: rec.radio.swap,rec.radio.amateur.antenna,rec.radio.amateur.equipment

FOR SALE: 2m J-Pole Antennas

These are the classic J-Pole antennas used by countless amateur operators for 2m work; they are inexpensive and rugged. Designed for fixed-station use either outdoors or in an attic. Assembled height is just over 6 ft.

Made from 1/2" rigid copper tubing with an SO-239 Coax connector at the feedpoint. Two-piece design for easy transport - breaks down to less than 40" height. Pre-tuned using an MFJ Antenna Analyzer for center frequency of 146.00 MHz and SWR < 1.5:1 at the band edges. Assembles in under 2 minutes with no special tools (other than a screwdriver). Just assemble, erect the antenna on your support, attach your coax and you're on the air!

Price: $22 each plus $5 shipping/handling (UPS Ground). Payment in advance by money order (preferred) or personal check (must clear bank before shipping).

I am making these antennas to fill a gap in the antenna market for those on a limited budget and for those who don't have the tools or desire to make the J-pole themselves (construction plans are easily found on the internet for those wishing to build their own.)

For more information or to place an order, reply via e-mail. A 6m version is also available; e-mail for details.

73,

-Marty KI0LO

Would you say the PL decode takes less that 750 msec?

The quick test is transmit from another radio, listen on the Yaesu VX5,
have the other person key and immediately say hello. Did you hear it?,
or just the carrier dropping?

Hi Bob, The TS440's are having a lot of problems with the Phase Lock Loops. The solder is deteriating (dispite what Kenwood says about glue problems). If you have the test equipment, good soldering equipment and soldering skills as well as the service manual, it can be repaired in an hour or two. I used to work for Kenwood, and now do it on my own. If you want more specific suggestions, send me an e-mail at stuartL73@aol.com. Stuart Landau K6YAZ

4230. ICOM PCR-1000 for HF?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-16 00:00:00 UTC
From: Michael Young <nobody@all.org>
Message-ID: <7ckv66lfi1@remarQ.com>
Source record: 113796

I don't know if this is the right place to ask this; it looks like a swap meet.

I'm shopping for a SWL HF receiver, and considering Ten-Tec's RX320 and ICOM's PCR-1000. The PCR has a nice side-benefit of also covering VHF and UHF, while Ten-Tec's is limited to 30MC. Does the Ten-Tec perform well enough in the longer bands to offset the limitation? How well does the PCR perform in this same area? I don't think I've seen any reviews that address this.

Thanks.

Michael.

Want to trade my FT-736R 6M module for a 220MHz or 1296MHz module. Look at it, sitting there in your '736. Do you really use it? 6M is getting hotter. . . .

R599A classic Kenwood receiver, excellent condition and function - $185

TS680S - Multi mode, 160M-6M transceiver, 8 of 10 condition and 10/10 function - $575

TE 1050G 6M PA + GaAsFET rx amplifier 10W in for >100W out - $200

IC-451A in 9 of 10 condition and 10/10 function. Thinking about satellite work, or getting a transverter for 432MHz? For less money you can get the IF and transverter in a single package. - $375

I am interested in trading mostly. The TS680S might be an excellent trade for a '736 1296MHz module. . .
All prices FOB 60195.

Bradford what have you EVER done for amateur radio? This fellow you
are so fond of abusing has written a very nice piece of freeware and
you
give him crap for it. So what contribution have you made? Parking
your
fat ass on a chair to do the talk-in for the SW Convention doesn't
count.

Why you are so hostile to Goran is a mystery to me. Perhaps you are,
as some who know you have suggested, mentally ill. Just as a
suggestion,
why not seek a little professional help, perhaps you could be
treated.

It doesn't "cover new ground" the radio address is different and
perhaps
a few fields in the data, this is not rocket science. Your talking
about
a few hours of code. The reason Ripoff Technology Systems screws
people on the upgrades is because they can. They have an exclusive
with Yaesu for access to the command set so they can charge what
ever they want. What the guy in Germany has done is just as good
and free to boot. Take your medication and remember you DON'T
work for Ripoff Technology Systems Walter.

I agree with Van...Having used both radios in casual and contest operation, the FT-920 has got to be the worst radio I have ever used in a contest environment, with the possible exception of the TS-570. The FT-920 was even horrible on 6 meters during the June VHF contest. The FT-920's dual conversion receiver just cannot handle strong adjacent signals at all...Strong adjacent signals blow through the IF like water through a sieve. No DSP cant help this problem. This problem is a flaw in the fundamental receiver design. Let me tell you about the noise blanker. When you turn it on, you start hearing signals about 10 KHz away and they sound like a bee in a tuna can. Turn the NB off and those signals go away. Also, I was alarmed when I first turned the 920 on...There was this" whoosh...POP!" in the speaker any time I turned it on. Sounded just like a cheap stereo receiver. These are not opinions...they are observational facts.

I've had 4 different antennas on my ft50 and the one that worked best for me is the Pryme RD-98sma. It was about 1-2 s-bars better for 2 meter, 440 was about the same to a slight improvement and if you like to scan above 440, the stock antenna was the best but the RD-98 still worked in that range ok. I liked the antenna enough to outfit the rest of my ht's with the RD-98's. They are made for both sma and bnc connections. Check it out here
http://www.adi-radio.com/antennas/index.html

Do yourself a favor, and look at the entire thread again. Just for the heck of it. The original inquiry came in, and I replied to it, recommending a program that I am familiar with. Pure and simple. I believe I even cited the Web site and/or a tele number, too.

Then watch how the thread deteriorated - and by whom.

No big deal. I doubt you'll re-read the thread to see how it materialized. But I just did, and have no problems with what I have publicly written or recommended.

4254. Kenwood SSTV

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-16 00:00:00 UTC
From: n7hmf@ucares.org
Message-ID: <7cm1t5dlo1@nnrp1.dejanews.com>
Source record: 113820

Our ARES group wants to use SSTV to complement our existing ATV equipment. Has anyone used the little Kenwood SSTV unit? I have some questions regarding it:

What modes does it support? Can it accept an external camera input? How well does the attached camera work? How easy is it to interface to non-kenwood equipment? (other mobiles, HTs etc.) Does the display show what the camera sees while preparing to "grab" a picture?

Related questions:

What other equipment is available that might fit the bill for a field deployable SSTV solution? We have played with the PC/Soundcard solutions and found them to be great for base station and EOC use, but for use as a remote in- the-field transmitter, they are too cumbersome and expensive to deploy.

Any suggestions?

Have RF Cocepts 2/70 dual band amp. Output is 200 watts on 2 and 125
watts on 440. This is a FM amp only. In-put range is from 20 to 50
watts
to drive. The amp is in excellent condition. Has build in RF/SWR
indicators. Complete with power cables, manual and original box. This
is a very duty amp. Not for 100% duty cycle for repeater operation.
Works and looks GREAT!!!
Non Smoker.
Price: 360.00 Plus Shipping.

There are no port scanning routines, you have enter the
com port manually, just the same as in the ADMS.

YAESU HT's ofer no possibility to scan them, or to
detect the presence of them, ICOM's HT's can that.

Why are you posting items like this on rec.radio.amateur.homebrew and rec.radio.amateurs.boatanchors? For the same reason that telephone solicitors call thousands of people, interrupting whatever they're doing, to make one sale?

Correct, this type of Software is just a database application,
nothing to compare with deacent Software like, Spectrum
analysers, SmartCard programming or you should take a look
at some civil engeneering Software for Dynamic nonlinear
analysis, with more then 5 MB source code, no shell or
something like that,just extreme high mathematics, that
type of Software can not write everyone, that is science.
(I thing of:Nastran, Adina, Cosmos, Ansys,...)
I can send anyone that wants to take a look a part
of some source code, it's fu.... sh..

This little programms for memory managment can write every 15
jears old kid with any programming language, I have written
them in VisualBasic. It is a MOST SIMPLE DATABASE aplication,
that can be written in 48 hours, I calculate here 24 hours for
the datastructure analyse, everyone that has a little
knowledge of programming knows that this is kids stuff.

My Software for the IC-Q7,IC-R2,FT50,... are less then
15 Kbytes, yes, my picture takes 100 :)))))))))) , damn,
I must compress it in the next releases :))))

I bought a dozen of these (plus the receivers) back in 1973, for the NWS site on Swan Island. Frederick has been out of business for a number of years, it appears. I'm trying to recall if the plugs were Molex (confusing it with the Scientific Radio stuff we also had) or something else. I've given away the books years ago, so I can't look there. As I recall, they weren't too uncommon. Jog my memory and maybe I can help.

>Is 10 gauge wire enough to groud an attenna tuner, or do i need to use
>a copper braid or copper strip?

What type of antenna? A balanced antenna, IE dipole, doesn't require
a RF ground at the tuner. An end fed random wire requires a very good
RF ground at the tuner. What power level? Higher power often requires
a better ground. What frequency, and what length will the ground run be?
These factors also affect the sort of ground you may need.

Now if what you really need here is a *safety* ground, the National
Electrical Code says #10 will do. But it isn't a good idea to let lightning
into the station in order to find a ground. Much better is to use ground
window technique and supply a ground (and suppressor) before the
feedline enters the shack. This helps keep lightning outdoors.

First determine if the amplifier is Type Accepted for operation at 462 MHz.
(I strongly suspect it isn't, therefore you can't use it there.) But if it is, then
you need to derate the amp about 50% (reduce drive to it so it only runs
50 watts) and add a fan in order to make it survive the heavy duty cycle
of repeater service. No retuning should be necessary since the circuits
are broadbanded. Don't forget to use a circulator on its output to avoid
reradiating spurious mixing products on other nearby repeater channels.

Source record: 113851

Picked up an Icom IC-725 at an estate sale. The wife
couldn't find the manuals for it. What I'm interested
in is what Icom automatic antenna tuners were/are
available for this HF rig?

I did a search on the web and it appears that the
AT-150, AT-160, and AT-500 are compatible with it
as well as the the AH-2 and AH-3 mobile tuners.

Can I use the current AT-180 tuner with the IC-725?

Thanks. kf6aek

Well, then - that's weird. My original post was actually backwards - the FT-50 defaulted for me to COM 1, and the VX-1R defaulted to COM 2. But you make user config simple and painless.

From: Jacek Maselko <Jacek.Maselko@noaa.gov>
Message-ID: <7cmmna$dv6$1@lore.eur.sprynet.com>
Source record: 113856

What are your guys' thoughts on the Icom IC-T2H HTs? We are going to
Everest in a couple of weeks and I need to get a couple more HTs. We
already have 6 Kenwood TH-22ATs so a comparison to those would be great, but
the icoms are quite a bit cheaper.
Also will it be better to get a mobile radio (50watts) to set up in
basecamp, or a booster (like Maha) to be used with one of the HTs?

Thanks a lot,

Jacek, KL0RW

4299. FS: Tektronix 575 Curve Tracer

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-16 00:00:00 UTC
From: yulius@welsh.ecn.purdue.edu
Message-ID: <7ck78b$5n8$1@mozo.cc.purdue.edu>
Source record: 113919

Hello,

I have a Tektronix 575 Curve Tracer forsale. It is in excellent working condition. This curve tracer used vacuum tubes as parts. It is good for measuring the transistor characteristics. This unit also comes with manual. I am asking for $200 + UPS Shipping.

If you are in near West Lafayette, IN area you can pick it up. The curve tracer is very heavy.

If you are interested, please send an email to: yulius@ecn.purdue.edu

Best regards,

Aristo

Message-ID: <7ck7p7$5tc$1@mozo.cc.purdue.edu>
Source record: 113921

Hello,

I have a high voltage tube power supply forsale. This tube power supply uses the UTC S42 power transformer. The 1962 Allied catalog lists it as their highest price power transformer, with the following specs at 115V, 50-60 Hz: 1200/1050@300 ma VCT; Rect. Fil. 5V, 6A; Fil. 1 = 7.5V tapped 6.3V, 3A; Fil. 2 = 6.3V, 3A. Large choke (unknown manufacturer), Gudeman 10 uF/600V oil cap. All on black metal chassis with ceramic tube sockets, umbilical cords, power switch. Picture of the power supply:

http://expert.cc.purdue.edu/~yulius/utc.html

Transformers is guaranteed. Two 5R4G rectifier tubes are tested strong. Otherwise, it is sold as is due to its age. I am asking for $65 + UPS shipping.

If you are interested, please send email to yulius@ecn.purdue.edu.

Best regards,

Aristo Yulius

What would be an appropriate time frame for software releases, Goran? Six months before the supported product hits the streets?

There IS a difference between "hobby-ware" and commercial products. Commercial products - in this instance - require a lot more forethought and "permissions" than does "freeware" and "hobby-ware." You cannot intelligently compare the production timelines of commercial products and hobbyist wares.

And, again, your facts are skewed - the software has been written, according to RT Systems. The present delay - according to RT - is coming from Yaesu - NOT software programmers.

Maybe if you had read the article you would understand what's going on. While it is partially about America, it is more about the politicians and other scumbags trying to take away our rights. And that includes Amateur Radio!! You have to stand up and speak your mind sometimes instead of just following like a bunch of sheep. Don't take it for granted that what you are doing today, be it radios, guns or whatever, is always going to be there.There are to many instances in history where peoples rights have been taken away, and many times it was because they didn't have enough guts to stand up for what they believe in. So first, get a clue and read something before you get indignant, and start spouting off a bunch of nonsense that you don't even know what you're talking about.

I have had 4 2500Ms. I don't think any of them were made in Japan (Don't know for sure). The 2 I currently own were made in Taiwan. Only complaint I have, the MH-36c mic is used now instead of the MH-27. It doesn't seem to be as heavy duty a mic. They are nearly intermod immune. No more than they cost you can't get hurt. I sold one recently. Regretted it so much, I bought another one new.

Left-wingers have a remarkable capacity to find absolute evil in a conservative who talks about morality, decency and the self-sacrifice that's necessary to stand up for what is right.

Just remember, many of these same left wingers rose to the defense of our "president", who:

- Smoked pot, but didn't inhale.
- Didn't dodge the draft.
- Never got any loan from the Whitewater deal (although the canceled check turned up later)
- Didn't have sex with Jennifer Flowers.
- Has no idea how NINE HUNDRED FBI files got in to the White House.
- Didn't lie under oath in the Paula Jones lawsuit.
- Received (through Al Gore) political donations from the Bhuddist nuns, in sequentially numbered checks, all made out for exactly $5000. All completely legal, of course.
- Didn't respond to those donations by personally overriding the objections of the Pentagon and State department, allowing Loral to sell previously restricted missile guidance systems to the COMMUNIST CHINESE.
- Didn't have a sexual relationship with "that woman, Miss Lewinski" (wagging his finger in righteous indignation).
- Said, with a straight face, "it depends on what the definition of "is" is".
- Didn't rape Juanita Broderick - at least we assume he didn't. He simply won't respond to the allegations.

It was the liberals who in the past stood up against the war in Vietnam, racial oppression and corruption in political office. It's interesting - and very sad - how they've abandoned their principals and redefined hypocrisy. The fact that someone could read Charlton Heston's speech and interpret it as a call to "inciting others to join their madness" tells you just how twisted their reasoning can be.

It's 1984 already.

With regrets,
Charlie, KS1C

I know this is off topic.
I know-- I'm a baaaad boy.
It's also important.

I wasn't going to say anything else, but Mr. Young's statements
need an answer. They are protected speech-- he has harmed
no one by his opinion, and they are understandable given
modern conditioning. So please don't flame him!
But free opinions are not always correct opinions.

Let us allow Mr. Heston's own words to answer Mr. Young's charges:

Michael Young wrote:
> Chuckie is advocating mob action, not independent thought or counsel.
> Not once does he admonish you to get the facts and weigh their meaning.
Heston: "I want to...re-connect you with your own
sense of liberty ... your own freedom of thought ...
your own compass for what is right... Who will guard
the raw material of unfettered ideas, if not you?
Democracy is dialogue!"
To any person not pre-conditioned to a certain attitude,
this is a clear call to honor your independent thought
and to debate that thought. Moreover, he presents some of the facts
through example and metaphor throughout the speech. The need
to weigh them is implicit in their presentation within the
context of the above quote.

> You only need to feel morally outraged, and to express it loudly
> everywhere and to everyone. If they won't listen,
>do everything you can to hinder them.
Explicitly untrue statement.
Heston: "But what can you do? How can anyone prevail against
such pervasive social subjugation?...
You simply ... disobey.
Peaceably, yes. Respectfully, of course.
Nonviolently, absolutely."
Clearly, Mr. Heston has not advocated doing
"everything you can to hinder them."
I submit that this response is typical of conditioned responses
brought about by the tyranny of thought that
masquerades as "liberalism" today.
Tyranny doesn't always wear a swastika.
Sometimes it wears sheep's clothing and calls itself "liberal"

while ruthlessly attacking those who's opinions differ.

(Personal and unsupported attack against Mr. Heston deleted.)

>I went there looking for something of substance;
>whatever it was you saw, I missed it entirely.
Attitude conditioning from television and
modern academia prevents actually seeing what is clearly written
and generates a conditioned, knee-jerk negative response.
The quote about "hindering" above is a good example.
This doesn't mean the person making the charge is "bad."
It means they are unfortunately influenced by these decades
of conditioning. They are intelligent.
They will come around in time.

Kind regards,
David Stinson

Nothing! (per say) It reads back only the common items from the radio when you are sitting their looking at the thing. It won't do read back over the air so it is of no help in cross band repeat.

Save your money and don't even wast the money on this option.

If you would like I can either mail you a photo copy of the page in the instruction manual that tells what the option can do or I can scan it and email it to you as a jpg or bmp file.

4323. Please register your favorite VHF/UHF+ simplex nets with our database!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-17 00:00:00 UTC
From: "John L. White" <jwhite@materials.com>
Message-ID: <36F04A8E.E3ED20EF@materials.com>
Source record: 113742

Please visit: http://www.materials.com/N4IFC.htm and follow the link to our Simplex Net Coordination Page. We have taken on the task of cataloging all of the Simplex VHF/UHF Nets around the country. Once this

database grows enough to be of general interest it will be made available to the public via the above link. The purpose of this effort is to increase the usage of our VHF+ bands for simplex and/or weak signal purposes. In most areas the 6 meter, 2 meter and plus all mode simplex frequencies are seemingly "dead" except during contests. But, this is an illusion. All you have to know is where to listen and when. There are literally thousands of nets in operation at all times of every

day. Please help us catalog these by submitting all such nets that you can provide accurate information about! It will only take a few minutes of your time and the collective reward will be tremendous for our hobby!

Please "Tell a Friend" and publicize this effort over local nets and at club meetings. To be successful we need to grow our database enough to be of general interest!

Thanks!

N4IFC
John

I am selling my collector's condition TS-940S/AT, SP-940, and a brand
new MC-60a microphone. Includes 500 hz cw filter.
This rig is outstanding. It's a rarely seen on the market 10 million
serial number rig.
Includes all manuals and factory boxes.
Asking $1,250, but make me an offer. My new rig's on the way.
Bill W3WJ

Larry,

I talked with you last night (?) about this unit and offered $925
delivered, but it would be after April 2 before I could send you
the money order. Let me know if you decide to do that and I can
send you a deposit on it.

Thanks,

Al Patrick

Probably the most surprising aspect of Heston's speech, personally, is that isn't quite the mad ramble I was expecting. I might not necessarily agree with him, but he's not out of line. He makes good points, although I can't reconcile the NRA with anything I personally believe in.

I have to agree with Charlie. The Left has really dropped the ball. It's tragic. However, we've been rather quick to forget the travesties committed by the two previous, republican presidents. A similar litany to Charlie's of Bush's and Reagan's careers would be quite impressive.

To all readers outside the USA, I hope you at least find all of this amusing. If not, I apologize. As for me, I'm fascinated by politics, and I'd love to read similar rants regading politics in other nations.

Speaking of other countries, is Canada hiring?

Sincerely,

Neil

I thank you for your thoughtful reply. Further follow-ups can go to me
at myoung@interaccess.com.

David Stinson <arc5@ix.netcom.com> wrote in message
> > You only need to feel morally outraged, and to express it loudly
> > everywhere and to everyone. If they won't listen,
> >do everything you can to hinder them.
> Explicitly untrue statement.
> Heston: "But what can you do? How can anyone prevail against
> such pervasive social subjugation?...
> You simply ... disobey.
> Peaceably, yes. Respectfully, of course.
> Nonviolently, absolutely."
> Clearly, Mr. Heston has not advocated doing
> "everything you can to hinder them."

Heston, in his own words:
"When a mugger sues his elderly victim for defending herself... jam the
switchboard of the district attorney's office.

"When your university is pressured to lower standards until 80% of the
students graduate with honors . . . choke the halls of the board of
regents.

"When an 8-year-old boy pecks a girl's cheek on the playground and gets
hauled into court for sexual harassment . . . march on that school and
block its doorways. When someone you elected is seduced by political
power and betrays you . . . petition them, oust them, banish them. When
Time magazine's cover portrays millennium nuts as deranged, crazy
Christians holding a cross as it did last month . . . boycott their
magazine and the products it advertises."

These imply judgements in haste from factoids presented in mass media.
Certainly there are public acts that cannot be misinterpreted. It is
quite something else to call on you to act on the scant knowledge
filtered through the evening news.

By themselves, this quote and Heston's "moral compass" snippet are
relatively harmless. However, they say very different things. The first
calls on you to express your liberty; the second directs you to act
against the targets selected for you. Combined, they implore you to
accept the judgements presented by the press, and act harshly and
decisively. Perhaps to a cognizant majority, the unspoken step of
evaluating what you *don't* know versus what we are told is clear, if

implicit. However, I lack the faith that the majority habitually exercises independent thought or judgement. Your words, and the mere fact that you were moved to respond, say you share at least this much of my cynicism.

> I submit that this response is typical of conditioned responses
> brought about by the tyranny of thought that
> masquerades as "liberalism" today.
> Tyranny doesn't always wear a swastika.
> Sometimes it wears sheep's clothing and calls itself "liberal"
> while ruthlessly attacking those who's opinions differ.

You've obviously mistaken me for something I am not. This is easily forgiven, as you know me only from the few words I wrote. I find it ironic that your rush to judgement here is precisely the example I sought above.

> (Personal and unsupported attack against Mr. Heston deleted.)

Heston: "Underneath, the nation is roiling. Americans know something without a name is undermining the country, turning the mind mushy when it comes to separating truth from falsehood and right from wrong. And they don't like it."

Heston: "So that this nation may long endure, I urge you to follow in the hallowed footsteps of the great disobediences of history that freed exiles, founded religions, defeated tyrants, and yes, in the hands of an aroused rabble in arms and a f ew great men, by God's grace, built this country.

I stand with my likening of Mr. Heston to a "loose cannon". It was not a personal attack. A loose cannon on the rolling decks of a frigate at sea is a danger to everyone. A call to arms -- I interpret his speech as thus -- with no clear target, in the name of liberty and democracy, is likewise dangerous. To counterpose, I asked only that we take the time to evaluate before acting.

Maybe he is right, and I am wrong. Maybe action, any action, is better than the paralysis of uncertainty. In a colorful world often portrayed in black and white, there is a large area of un-black and un-white, and TRUTH lies there, not in these fringes. He urges you to pick a cause, any fair and just cause, and act. I urge you to consider the undue harm you may cause in your zeal, and temper this need to act.

Michael.

>Heston, in his own words:
>"When a mugger sues his elderly victim for defending herself... jam the
>switchboard of the district attorney's office.

The left wing advocates what? Feeling the muggers pain?

>"When your university is pressured to lower standards until 80% of the
>students graduate with honors . . . choke the halls of the board of
>regents.

The left wing, which finds a comforting home - if not its very roots - in the hallowed halls of education, tells us that lowering standards rather than demanding excellence is justified. After all, it gives the student "high self-esteem". The fact that we routinely pass students along to the next grade, with serious gaps in their skill-set, doesn't indicate a problem in the school system. It simply means we have to spend more money on it.

>"When an 8-year-old boy pecks a girl's cheek on the playground and gets
>hauled into court for sexual harassment . . . march on that school and
>block its doorways.

Yes. No doubt he's just learning how to oppress women. After all, according to the radical left, that's every man's calling.

When someone you elected is seduced by political
>power and betrays you . . . petition them, oust them, banish them.

The left wing suggests you just re-elect them. After all, a Democrat - ANY Democrat is better than ANY Republican, regardless of their conduct.

>These imply judgements in haste from factoids presented in mass media.
>Certainly there are public acts that cannot be misinterpreted. It is
>quite something else to call on you to act on the scant knowledge
>filtered through the evening news.

The left wing, typical of liberals, doesn't have the faith in your ability to understand the politics of the day. Rather than believe that you would actually have some idea of what you are protesting, before you risk your reputation or even arrest, they will believe that you must be a robot, marching on orders from the secret headquarers of the Vast Right Wing Conspiracy.

Of course, this is in keeping with the Big Daddy Government philosophy that the left wing promotes. WE need to take care of YOU, because you're not smart enough to do it yourself. More government regulation will do the

trick.

>By themselves, this quote and Heston's "moral compass" snippet are
>relatively harmless. However, they say very different things. The first
>calls on you to express your liberty; the second directs you to act

>against the targets selected for you.

A paranoid interpretation at best. A deliberate misrepresentation at worst. He simply suggests that you no longer passively tolerate the outrages that the left wing has heaped upon our society over the last few decades. Political Correctness is just the latest of many.

Recall if you will, the period of our American Revolution. A battle incited by men of position and wealth - men who had EVERYTHING to lose. One of those men, Benjamin Franklin had a remarkably insightful quote on this topic. He said "He who gives up a little liberty in order to gain a little safety, deserves neither". We're well advised to stomp out this disease of "political correctness", that threatens to stifle the free exchange of ideas - and to do it while we still can, hopefully (with apologies to George Orwell) sometime before 1984.

And yes, it's off topic, particularly to those outside the USA. My apologies.

Charlie, KS1C

What a SHAME that critics of the NRA so EAGERLY assume that all it's about is nasty GUNS! Fact IS, the NRA is about individual freedoms and the rights of ALL, combined with access to the tools, to most properly maintain it - as outlined and established in our country's Bill of Rights - the rights of INDIVIDUALS! The NRA, and its members basically feel that without the "enforcement" capability provided by the second amendment, all the rest are uninforceable when push comes to shove... Sort of what would happen in civil law enforcement if we only had police, but no judges or prisons to actually ENFORCE controls upon those who disregard our laws.

>

Not sure WHERE this non-sequiter came from - Heston's comments were aimed at opposing philosphies of our society, not individual Presidents - did you perhaps feel a twinge of discomfort due to your political affiliation?

>Speaking of other countries, is Canada hiring?
>

UMMmm - well, I would suppose that if you are deeply inclined to seek out and become a part of a country/society more involved in the idealogy that all you have, are or ever hope to be, MUST be provided and controlled by a government "caretaker", Canada WOULD be a good place to start...

Wammes,

I understand and respect your opinions, but Mr. Heston's speech had far
less to do with the NRA and far more to do with moral and intellectual
honesty. There are other rights that we enjoy and should jealously
protect. Our rights to think and speak as we please are among them.
Try not to let your opinions about something cloud your judgement and
ability to reason clearly about others.

Russ Nixon - KF4WXD

Did you re-send it? Part of my job is e-mail tech support and when our server crashes there goes the e-mail. I usually resend a message if I don't get a reply after a couple days. I personally respond immediatley and if I don't have the answer I at least acknowledge that I received their message. It is not a perfect world and yes I use a spell checker at work :-)

Jon Pearl Replies...

Handgun crime is on the decline here in the United States. We have vast numbers of guns.

Home invasions in the U.S. are on the decline. Burglars know that their fate is in the homeowner's hands.

Handgun crime is on the decline in the United Kingdom also. In fact their citizens no longer have the ability to maintain ownership of guns.

Home invasions in the U.K. are soaring! Burglars invade, day or night with impunity!

The weapons of choice in the U.K. have now become, fists, blunt objects, sharp objects, etc.

Violent crime in the U.K. is on the rise. Citizens no longer have the 'tools' to protect themselves.

Your country is beautiful and it's people are a testament to modern society and civility.

You might also be interested in noting that there is a government issued semi-automatic rifle in the homes of most Swiss citizens. Switzerland's crime rate is very low.

I just bought 4 UHF's at a 'fest for $40. One had no tone board - two had Motorolover tone boards, and one had an aftermarket tone board.

All will be used for linking purposes.

Hello,
It's been recommended that I look into this as my first HF radio. I'm interested in anything anyone knows about this radio. Is the receiver general coverage? How's the sensitivity? Is maintenance a big hassle? Any experiences, good or bad, are welcome and requested. Thank you.

Hi,
No problem with any 6146B or even regular Non B. But you need to
readjust neutralization capacitor on 10 meter band. Follow the service
manual for this adjustment. Original tubes are Matsushita (Panasonic)
S2001.
Good luck.

I've had some dealings in tech support from the "other side" and firms do "triage" email and calls. If your question is something like "I was wondering what brand of solder you used in your radios" you may stay on the bottom of the pile for quite a while. (I'm not trying to trivialize your question - just an example.)

You might attach some urgency to your question even if you have to bend the truth. And keep sending it, it increases your odds and stuff gets lost. I think alot of people get so bent out of shape that they aren't getting answered that they stop trying. These big companies are just clumsy, its nothing personal.

I agree that every firm should answer every piece of mail, even if it is to say "we received it".

Rich, you are obviously aware that rec.radio.swap exists for the purpose of selling radio equipment. You should also be aware that cross-posting to the other four groups is not appropriate.

For those not familiar with eBay, it encourages the leaving of feedback. Six people with whom Rich has participated in auctions have left negative feedback, cut and paste below. Rich bent the rules to argue his side a couple of times by improperly giving himself positive feedback. These are included.

Rich, anyone can have one or two disagreements customers, but your record demonstrates that you have a problem.

Cut and paste from eBay:

User: 1rich (richcom@earthlink.com) (34) Date: 12/20/98
14:50:51 PST

The Yaesu FT3000 transceiver allows upper case alpha lables to be
programmed. The ADMS-2c software does allow lower case to be typed
into the lable field with the result of flashing characters on
the FT3000 display. Lower case e through to lower case n gives
flashing 0 through to 9 while lower case o though to lower case
z gives flashing upper case A throught to upper case L.

4362. FT-50 mods

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-17 00:00:00 UTC
From: barryo@fastlink.com.au
Message-ID: <7comdfmes1@nnrp1.dejanews.com>
Source record: 113869

marc_k@walrus.com (marc_k) wrote:

:Actually, the '50 gets CMT images 90.2 Mhz above the real freq.
:The RX quality of the images is nearly as good as the results acheived
:with a mod'ed unit.
:BTW, as the 440 ham band covers 420-450, and a stock '50 only covers part
:of that range, there is a perfectly legitimate reason to OOB TX the unit.
:Also, the BAND-FREE mod allows RX on 2 TV channels that it will not
:otherwise operate on, which can be useful,
:and of course totally LEGAL.
:So the poster who ASSUMED illegal intent to mods should not make
:assumptions regarding the above.

I suppose most of you are aware that it is possible to switch the FT-50
into freeband mode by hex editing one byte of the .rdf file. What I
would like to know is if there is a similar zap for the FT-3000.

4363. Re: What do you think of the FT-2500M?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-17 00:00:00 UTC
From: msb <msbSPAMMAPS@newpony.com>
Message-ID: <7cotb1$lkq@dfw-ixnews5.ix.netcom.com>
Source record: 113870

Well, this is my opinion...

I looked at one off and on for a few months and liked it
more each time.
I was going to use it for portable packet and a standby 2m
rig. I liked its simplicity, the feel of knobs, and milspec shock
rating. Although I expected the little door on the front to
be the first casuality.

I went to buy one but they are no longer made in
Japan. Otherwise, I would have one. I've been a Yaesu fan
for a long time but I don't care for most of their new stuff --
way too complex, read bells/whistles/software, and I question their
quality/reliability.

As far as MARS -- It wasn't my direction but I think you're on
the right track by using the web/newsgrps.

Good luck,
msb

I can't specifically help you with connecting the D7A to a computer, but there
is an entire Special Interest Group on the Tucson Amateur Packet Radio (TAPR)
group's home page (http://www.tapr.org). You will want to visit the SIG at
http://www.tapr.org/cgi-bin/lyris.pl?site=tapr&enter=htaprs . Post your
question there, and you should find someone to help you.

I've enjoyed my D7A during the three weeks that I've owned it, but I have yet
to connect it to a computer, and I have yet to use the 9600 bps packet
features.

: interested in anything anyone knows about this radio. Is the receiver
: general coverage? How's the sensitivity? Is maintenance a big hassle? Any
: experiences, good or bad, are welcome and requested. Thank you.

Speaking from experience, yes the TS-520S is an excellent radio. I owned one for many years and am still kicking myself for selling it 11 years ago.

It has a solid state receiver, with good sensitivity. With the optional CW filter it rocks. There is no general coverage, nor does it cover the WARC bands. But for a 160-10 SSB/CW radio it is hard to beat.

It does have some additinal redeeming features that make it attractive, such as the 50 and 144 MHz converters for it. I owned the 2 meter converter when I still had mine and it was great.

I have read some of the follow up posts, one person wrote that it wasn't a great radio from a maintenace standpoint. I disagree, for one thing it uses simple component technology. No microprocessors or special LSI chips that can't be had any more. Remember, large commercial concerns like Amateur Electronic Supply no longer accept the TS-440 in trade because they can't service the specialized components any longer. With the service manual you should be able to keep the 520 running well into the next century.

They are good radios and play well. 20 years ago I used to run with one mobile in a Ford Fiesta as well as from the home shack. The passengers had to ride in the back seat of the Fiesta as the 520 ate all the room but it played great. Lots of DX.

Regards,
Joe N9JR

> Charlie, KS1C - that's the CALLSIGN, which completely identifies me. KS1C.

I realize that many hams are proud of their call signs. I like mine. I
even have on my car's license plates...

But why are we so hung up on "callsigns"? An amateur call sign
identifies the station, not the operator. I have always found this to
be a wierd thing about hams - I was involved in land mobile, marine, and
flying airplanes before I got into amateur radio. Never met anyone in
those services that introduced themself by their licensed call sign. I
identify myself on and off the air with my name. I identify my station
with it's call sign.

And you can't get my street address with my call sign. I don't even
live in the city on my license, let alone at the address. You might be
able to find my birthdate in some old database, but is there a current
database that has those?

But Charlie is right, a ham should be able to get a pretty good idea of
who and where he is by "looking up" the given call sign. But his post
was not over ham radio, it was over a newsgroup. And it wasn't related
to ham radio. To those non-hma that may be here, he is just a guy that
calls himself Charlie.

What if I signed this note with...

73,
Lisa
KD6ELA

What if you heard a female voice on the radio signing clear with KD6ELA?

Wow, words of wisdom from a no coder.
What does land mobile, marine, and airplanes have to do with amateur radio? Can the FCC contact you at the address they have on file for you? Take a peek at part 97 O Wise One and see what the FCC has to say about that. Do you ever get any Qsl cards? Probably not, seeing as how it's rare to get a card for a repeater contact, especially if the address listed on the database isn't correct. Also, there is a local repeater with a voice ID'er with a woman's voice saying the callsign, but I have never heard a woman with the name of Jeff , which is the name of the control operator. Who really gives a rat's ass anyway, I sure as hell don't. You mentioned marine, I assume you mean boating, sailing,etc? I would sure feel stupid calling left and right port and starboard in daily life, but it is perfectly acceptable in the marine world. So what's the big deal calling yourself by your callsign, it's expected in the amateur radio community.
Signed, N0EE (look it up," Lisa,"(is that your name, or your "handle") if you need more info).

Actually when both parties are considered, COD is probably the best way to ship. As the shipper, I hesitate to ask someone to send me several hundred dollars up front. How can they know that I will ship anything. As the shipper the worst I can do is pay cod fees and don't we all take some risk when we deal via the internet? I wouldn't consider any other method as shipper or receiver.

From what I gathered is the station must be licensed to transmitt in the amateur radio Band and the individual that is running the station transmitting in the amateur radio band must also have a license..That sounds clear to me. BUT, when you ID you station with your station CALL SIGN. aren't you telling people who you are and if you have the privledges to transmitt on that portion of the band? also when someone calls you back using your call doesn't it identify you.. Ex: KD6ELA This is KA8TOK this in turn want you to respond hence you are being Identified by call not name.. Let's face it a Radio is not going to ID itself without some form of voice or code ID set up by a human being and it's true most stations are IDed with a call sign and that call does ID the individual that Has the right to those Frequencies that are assigned to them by there License Class for that call. If it were not so then how do you explain Amateur radio Call books or CD-ROMs?

The reason not to sell it here is that rec.radio.amateur.equipment is *not* a sale group, rec.radio.swap is.

Obligatory equipment discussion - does anyone know where I can get the little mounting board that makes a kenwood YK-88S filter the equivilent of a YK-88S-1? I want to take a filter out of my TS-440 and put it in a TS-450, and prefer not to get too kludgey...

- 73 Bob W7OV

4384. FS: GE MVS Mobiles (470-512 split)

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-18 00:00:00 UTC
From: wa6gsd@ix.netcom.com
Message-ID: <36F1E4FC.3EA2@ix.netcom.com>
Source record: 113591
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

For sale GE MVS radios, Model NPU-30.

Radios are 470-512 split, but I have programmed them down to
450 Mhz with full power and .5uv for 12 Db sensitivity. To
do this, all your channels must fall between 450-470 mhz.

Radios are 25 watt, 16 channels. They scan and do PL and DPL.

Radios are front mount style. Compact size and about 5# weight.

Radios come with a mic, bracket, and shell/pins to make your
power cable.

They are in excellent shape, both electrically and cosmetically.

Supplied programmed and tuned to your specified channels/PL's.

$95 each + Shipping.

Thanks

Steve-WA6GSD

4385. FS: Henry 130W VHF mobile power amps

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-18 00:00:00 UTC
From: wa6gsd@ix.netcom.com
Message-ID: <36F1E615.152@ix.netcom.com>
Source record: 113592
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

For sale...Henry model C130A30 mobile power amps.

Amps are FM only.

Units are 20-40 watts in.. A nominal 30W input drives amp
to it's maximum power of 130W output.

Amps are commercial model, with high harmonic reject filter
on output.

Units are tunable from 136 - 174 Mhz. Once tuned, bandwidth
for full output is 4 Mhz.

Supplied tuned and tested on you specified frequencies.

$85 each + shipping. Trades considered.

Thanks.

Steve- WA6GSD

4386. FS: Trilectric VHF power amps, 80W

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-18 00:00:00 UTC
From: wa6gsd@ix.netcom.com
Message-ID: <36F1E69E.5FBB@ix.netcom.com>
Source record: 113593
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

For sale, Trilectric VHF power amps.. 20 W in gives 80 W out.

Units are mobile, for 13.8 VDC.

Units are FM only.

Amps are currently on 153 Mhz, and have no provisions for
simple retuning.

Drive well with 10W for 40W output.

$45 each + shipping.

Thanks

Steve

4387. FS: EF Johnson LTR radio mobile speakers.

4393. GE Mastr II Repeater doc/software

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-18 00:00:00 UTC
From: Me <me@indiana.edu>
Message-ID: <36F10E01.2F52F7C4@indiana.edu>
Source record: 113628

Our club had a GE Mastr II repeater donated to us. We would like to make it work for our club's 2M repeater. We took it to a communications company in our area and they retuned it for our frequency but they are having problems programming it. Our repeater has older firmware so their programming software won't work. We can't afford to purchase new firmware ($250-$300). Does anyone know of a place that might have the right software so they can program the controller? The COMB number on the side of the repeater is B3S110DASHA. I have the S/N if that would help also.

Also, we are looking for documentation on this repeater also. Any help would be greatly appreciated.

Thanks

The Charlie I was referring to was the Charlie who wrote the post I was
respondingto. Sorry for the confusion. I am by no means on a first name
basis with Mr. Heston
and certainly wouldn't call him Charlie. If I were being derisive, I
might have called
him Moses, but I was being respectful and complimentary. His speech was a
dignified
expression of opinion.

As far as any twinge of discomfort or political affiliation, I have
little of either.

"All you"? It's just me we're talking about. I don't represent anything
more. Ideologyis dead thought, and I have no use for it. For someone who
talks about individual
freedoms, you're quick to generalize.

The SB-220 will run ok at 110v. However make sure that your socket and
wiring to the socket is rated for at least 20 amps. Because that is what it
draws at 110v.

4402. Help with screw for Vibroplex

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-18 00:00:00 UTC
From: tgold@microvest.demon.co.uk
Message-ID: <19990318.1609.9901100snz@microvest.demon.co.uk>
Source record: 113637

I just bought a Vibroplex key, it's a New York made DeLuxe, and it's missing just one screw. I'd appreciate any key owner telling me what the thread size of this screw is.

As I live in metric land, getting a US sized screw is not just a trip to a hardware store. There are specialists around who carry UNF and UNC hardware, but I'll probably need to mail order the part.

The missing screw is the one at the far end (from the operator) of the thumb/dot paddle. This paddle is mainly attached by the finger/dash knob, and this missing screw simply anchors the thumb paddle to stop it from rotating. It's even not a fancy chrome plated screw, and also it appears to have the same thread size as the screws that tighten the weights on to the oscillating dot arm.

Regards,
--

The keying line voltage on the 220 is too high for your 850. Use another relay. Yaesu makes one that is real nice and not too expensive. FRB-757 I think or make your own.

Good luck.

4409. Re: VX-5R or T8A?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-18 00:00:00 UTC
From: "Mark S. Jennings" <markjenn@halcyon.com>
Message-ID: <7crenj$c30$1@brokaw.wa.com>
Source record: 113644

I just got a VX5R from HRO. It is incredibly tiny, works great, and the battery life is outstanding (I've been listening to a FM radio station for nearly a day without recharging). I haven't had any of the issues mentioned by others. The receiver is excellent and transmission quality appears good.

But....the UI is obscure and difficult. The buttons are tiny, the triple function labels on each button are tinier (just about at the limit for unaided viewing with my 45-YO eyes), and the UI depends on button sequences which must be pressed within time limits (which seem very short to me). Doing something like entering a non-std rcv/trx freq into a memory register is really tricky. Just something like having a "Back" button to back out of a botched sequence would do wonders. It is definitely a radio that requires alot of manual study and practice. The manual is barely OK...I've ordered a supplemental pocket ref.

Just as an aside, I recently bought a new cellular phone (a Denso Touchpoint) which also has tons of features but uses a large general purpose display, menus, and a cursor/mouse button for navigation. It was prefectly usable out of the box with no manual study whatsoever. Three buttons (OK, CLR, and the cursor) are all that are required to do virtually everything except enter new phone numbers (separate keypad for that). So I think these radios, now that they are computerized, will migrate to new UIs that will be much better. When this happens, I'll definitely be first in line to get a new one.

Now I admit this is my first VHF handheld, so the others may be just as bad. But they certainly have bigger buttons.

Clint, What is the point of all of this "make my day" messages... Let the WorldWide Ham Community make up its "Mind" on who has and is providing The "Better" software.. My Vote it is hands down for Gorans "Freeware" software, Personally I am tired Of letting the manufactures BOX us into a Corner with every new radio that they Put out. I guess that Yaesu, ICOM and Kenwood have decided that the so called and "Advertised" "PC Control" feature (He He) CAN NOW become a Profit center by Playing the "Motorola" software game and "lets keep the instruction set a "Secret". Lets be realistic I watched Icom play the GAME with the Software for the IC- 706, then the "Free in Europe" but nada for the States Software for the IC-746. Lets face it when the "official" Control part (software and interface) starts To add up to more then 1% of the cost of the radio its time for that famous Ham Ingenuity to come to the rescue. Long live Ham Ingenuity. Wake up and smell the Coffee, Clint 73's

I bought a 520se in 1979, and sold it about 1993. Tube final and driver. I made several mods to it for Packet / rtty. I sold it (1993) when it was obsolete. You can find them here and at hamfests for $300. I bought a new Alinco DX77T, which you can now get for $700 and it is a current radio that is superior to the 520 in many ways.

Just my opinion

I find the "liberal" reaction to Mr. Heston's speach interesting.

Rather than directly refute the points he makes, "liberals" instead attack th
person, as if he is beneath consideration because of the opinions he holds.

Based upon the "liberal" reaction, only those from the left are worth
listening to.

To amplify what "Charlie" <no@spam.net> posted, the same people that
condemned Clarence Thomas when he was nominated (based upon heresay
accounts), demanded the resignation of Robert Packwood before any cases were
brought to trial, engaged in character assasination of both Paula Jones and
Monica Lewinsky, are the same people who refuse to consider the points Mr.
Heston makes. Why, because Mr. Heston is a conservative.

The crux of the matter is that we have a group of people in this country that
hold very influential postions and feel that they have the right to tell us
what to do and think. These people have the power to control what we see and
hear regarding what happens in our country and the world.

Bottom line is this: "PC" stands for propaganda and censorship.

A generation ago, "liberals" fought for the rights of the disenfranchised and
wanted to engage the country in free speach. Ironicly, it is the
conservatives that are now champions of free speach and are waging the
battles to preserve our individual rights.

There is a lot to consider in Mr. Heston's speach. Now if only people would
leave there preconceptions behind.....

Ross Lipman

rl1856@ix.netcom.com

Oddly enough, there are also parallels in this newsgroup. Take a look at the
A Jute/ M Lefevre wars. One side telling the other to shut up (in effect),
without a proper debate of the facts presented for ALL to see.

Sorry for the ramble.

falken1:
Thanks for the flame. Don't you have the guts to give your name?

FYI: With Prodigy, all four members of my family get individual E-mail accounts for a very low fee, unlimited internet access, consistent high speed access, and none of the problems that everyone complains about with AOL and others.

FYI: Several people I know who have the 242 also could not find the parts described in the mod posted here. This includes an RF engineer with more experience than you have probably been alive. Possibly the mod I have is different than the one you are referring to. I will check out the site you listed.

Don't bother to respond if you don't list your name and call sign.

From: Steve Dove <dsp@hifidelity.com>
Message-ID: <36F16D93.E60C3591@hifidelity.com>
Source record: 113657

Hi Keith,

This subject popped up a little while back, and like you I'd presumed it was just a 6402 or whatever. Since then I've had a chance to look at the one secreted deep in the bowels (ugh) of my '751 and the news is not good. At a guess it looks like a OTP '31/51 style micro, so they did it all in code in all likelyhood. Actually, when you consider that there's a fair amount of parsing etc. for the mini-network, it makes sense. There are a number of dip-switches also to set baud-rate, CI-IV / CI-V etc. Reverse engineering does not seem promising . . . without spending way too much time than it's worth, anyway.

The convertor for which you remember seeing maps in a rag was probably for the ubiquitous RS-232 / TTL buffer/inverter necessary with CI-V etc. to get the radio to interface with a typical 'puter's serial port. You'll need one of those as well as the UX-14... the Icom part number is CT-17, but if - as it seems - you are of a practical bent just lash up a MAX232 or similar '232 buffer forwards and backwards and that'll work just fine. (Someday I'll put mine in a box. Someday.) More specific details abound elsewhere, I just don't have any references to hand right now.

Two suggestions: advertise here on the newsgroups for one, or call Amateur Electronic Supply (or e-mail them: aesham.com) to see if they either have a new

or a recycled one lying about. When they get gear in in trade, typically they strip out all the options and sell the radio bare-bones and the options separately - obviously a more profitable strategy.

Cheers, and good luck -- Steve W3EEE / G3YDV

Source record: 113661

The 520 was Kenwood's second-of-the-line HF radio in 1978 when I first became a ham. It was a great radio then, but it is really getting long-in-the-tooth today. They don't tune the new HF bands w/o modification. I haven't been active on HF for ten years and sold mine last year for around $300.

They are built very ruggedly but are extremely complex. If you have any serious trouble, it will likely be impossible or uneconomical to fix. I'd look into something more current.

- Mark

>Icom IC-756.

Andrew;

Because the first two Yaesu rigs restrict accept ing optional filters, the
only choice is is the 756 !
I played with all rigs, (including FT-100--back to drawing board Yaesu.) this
past Sat. & Sunday at Charlotte, NC Hamfest. I asked all the reps pro & con. No
doubt about it, the 746 & 756 will accept more than just one filter !!

Plan to keep my Ten-Tec Omni VI PLUS wiht f-i-v-e optional filters, but the
756 would be first choice as back up.
Check www.texastowers.com for lower prices also.

4433. Looking for SB-644 pwr supply schematic

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-18 00:00:00 UTC
From: Michael Jacoby <m.g.jacoby@lmco.com>
Message-ID: <36F18A85.FBDED896@lmco.com>
Source record: 113668

Hello,
I'm looking for a copy of the schematic and parts list for a Heath
SB-644 power
supply for the SB-104A. (I think that's the PS part number)

Will pay copying/postage/aggravation fees.

Thanks, Mike N3MA

4434. 6m transverters?

Excuse me. I must not have seen your Net-Cop badge.

It's people like you, who look for reasons to be offended wherever they can find them, who are at the very crux of this issue. Political Correctness isn't limited to the USA. I travel extensively and have observed the same kind of nonsense in other countries. The new "whining class" proclaims some slight, real or imagined, and demands reparations or some other advantage over those who may - or may not - have been the perpetrators. Whether those reparations involve hiring quotas or suppression of free speech, they're an assault on basic liberty.

The fact that you can find offense in the term "the country" gives an excellent example. It's a pretty reasonable term. Given that this newsgroup is overwhelmingly populated by people from the USA, you might not be surprised to find us talking about things that concern the USA, in the same terms that we would use in common conversation in the USA.

However, you CHOOSE to see that term, and scream and stamp your feet, implying that we are the ugly American imperialists. All over the term "the country". Yes, it's an international newsgroup, to be sure - and somehow, all of the vast numbers of international readers found no offense in my term "the country" - all except Wammes Witkop. Congratulations. You're one in 6 billion.

The reason I used the term "whining" is because it fits precisely. And no, you will NOT tell me where and when I can talk, nor will I take the discussion to e-mail.

People like you are not worth the time or effort to educate.

Welcome to the kill-file.

Source record: 113677

Pro's = Very rugged & solid build. Lighted mike is nice, price on par w/ other low cost 2M mobiles, good performance.

cons = Missing a lot of features you get from others in this price range, ctcss(PL) decode is an additional cost add on chip. Aircraft AM rcv. capability not available ect. Unit is larger than all others which could be a factor to some installing it tight places.

All,

A friend in a local ARC has asked me to solicit help for him concerning installation of a HF antenna on a Saturn wagon. I'm not sure whether he wants to install a Bugcatcher, Screwdriver, Ham Stick, or whip but he is looking for something substantial. If not for the tailgate swing he would install a Class A trailer hitch. Can anyone advise us from their own trials or successes?

Tks es 73,
Joe, K5HLR

4447. Yaesu FT-890 drift problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-18 00:00:00 UTC
From: Roger Leone <arleone@inreach.com>
Message-ID: <ixYH2.1080$E5.2941628@news.inreach.com>
Source record: 113683

My friend Jake's FT-890 drifts wildly on cold start. Drift is perhaps a bad term, since it does not slowly drift in one direction--it moves up and down very quickly and it is hard to turn the tuning knob fast enough to keep up. The digital display does not change while this is happening.

The radio is only about 4 years old or so, and has been a reliable performer until recently.

I know that there are high stability TCXO's for sale that might be a good replacement for the original, but perhaps some of you have already faced this problem and found a way to make the original XO work the way it is supposed to (if, as I suspect, it is the reference oscillator that is the culprit).

Any info or assistance will be appreciated.

Hi Paulo

Icom IC-706/mk2 to AH-3(4?) Auto-Antenna Tuner, control connections:

1. TKEY: low if the tuner is not connected,
the <TUNE> button is not functional; high
Rear panel view: if the tuner is connected. On receiving
a TSTR signal, the tuner may assert TKEY
1 2 3 4 low to key the transmitter.
_____ 2. TSTR: normally high; pulses low twice
/ | when the <TUNE> button is pushed and held
< O O O O | for 2 seconds to start the tuner; pulses
_____| low once when the <TUNE> button is pushed
momentarily to stop or bypass the tuner.
3. +13.8V @4A: switched by <POWER> button.
4. 0V: chassis GND.

I *do* realize that in some countries other then my own, an interest in green - millitary - radios goes hand in hand with other hobbies I do not approve off. Frankly, I'm Dutch. We do not like guns in the hands of citizens. We have strict laws against it - and as a result, we have less violent crime then some countries where guns are easier to get..
The NRA is *not* my cup of tea at all - if I'd be an American I'd oppose them. But as it is, this is not my patch. So please stop advocating the NRA, it's chairman or applauding to one who does. This is an international newsgroup after all. Please take this thread to a place where it's not a spam - 'cause that what it is here! The amount of definitly off-topic messages is getting rather large, would'nt you agree?

Kind Regards, Wammes Witkop

I vote for an antenna system using the Hustler quick disconnect
fittings, so a quarter turn will allow you to remove all or
part of the antenna. I use a Hustler on the rear bumper, with
a quick-disconnect on the base, so it is fast to take off or
put it on. A motorized antenna is another possibility,
perhaps a screwdriver using a short whip.

As "Charlie" seems to operate under a cloak of invisibility, I'll post this answer which was ment to be private in the newsgroup. And, could we stop this? Now? Please?

Hi Charlie,

Charlie wrote:

> And yes, it's off topic, particularly to those outside the USA.

Indeed. I'm Dutch.

> My apologies.

Don't apologize. Just don't post this off-topic stuff.

> Two layers of asbestos underwear on.

Then I won't flame you. I'l just ask you nicely to behave yourself.

Kind regards

Wammes Witkop - under his own name and address, unlike yourself...

Trouble is, a Brown Shirt is still a Brown Shirt - it doesn't matter which arm-band is on it if you still goose-step through the square and terrorize the populace. Question the slogans of political correctness, and it's off to the social standing/workplace KZ for you!

Russ,

Whatever this is about - it seems *very* american to me. It does not relate to contempory Dutch issues, to be sure. Issues, that I will not discuss on this newsgroup, as they would not be of interest to the common demoninator here: Boat Anchors. That is the point I am trying to make - let's stick to business. Or, rename this group. To American BoatAnchors and revisionist Opinons. Just kidding...

But honestly, I happen to be a anti-millitarist. Strange, for someone with a hobby in green radios, I concede. Should I be posting treatises to my believes in that aspect here? I do not think so!

Try not to let your opinions on anything but BA's cloud this newsgroup, thats my opinion. The original posting was trespassing, the endless applauding does get on my nerves.

Kind regards, Wammes Witkop

I have a chance to buy a Yaesu FT-101B. I am trying it out now. I think it is a great starter HF rig. I haven't even got my tech+ upgrade yet, but it seems to recieve great. Does anyone know a ballpark price range for it? I have no idea what older (or newer for that matter) HF rigs cost.

I don't monitor this newsgroup so email me @: penny@mail.cafes.net

4460. Re: What do you think of the FT-2500M?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-18 00:00:00 UTC
From: jhulet@aol.com
Message-ID: <19990318002415.27806.00000435@ng105.aol.com>
Source record: 113696

I've had two FT-2500M. They are great basic 2m rigs. They seem very solid and there are no moving parts like a fan to listen to are have break. The mic I had with mine was the older 27, I had the 36 on my FT-3000M and liked it better, its seemed heavy duty and fit in my hand nicer then the triangle 27 mic. The FT-2500M is very easy to modify to transmit out of the 2m band, only clip of a wire and its done, works great and fool proof. It makes for a nice backup VHF Marine radio at 50 watts. The radio then can also be used for persons with careers that use radio communications. (IE, Law enforcement, Fire & Rescue)

Without a doubt, a fine 2m rig... get and you'll be happy you did and what a steal, $199.99 for a brand new one with the HM-36 mic, you just can't go wrong... =)

Source record: 113699

I need a UX-14 parallel to serial converter in order to computer control my Icom IC71.

Since Icom apparently no longer produce this, I shall just have to make one. I doubt if it it is much more than a basic UART but I don't really know.

Can anyone point me to a source of the circuit diagram and possibly also some rough idea of the original layout? Currently I only have the drawing showing how to install it in my IC71 manual.

I've got a vague notion I saw the circuit once in that excellent but now defunct U.S. publication "Ham Radio". Can anyone confirm my failing memories?

Try carefully resoldering around the "PLL5" part of the PLL board. That is the one that is used for FM but it must remain stable for all other modes. If it starts going a little squirrely because of bad solder connections, it will warble an SSB signal and if it gets too unstable it will cause the microprocessor to detect a "PLL unlock" condition and will shut down all frequency operations (the display will go black with nothing but decimal points. Mine had a bad solder joint. I have heard of some that had a bad tuneable coil in that PLL. I have also heard of other PLL's on that board that were screwed up with bad solder jobs. Have a close look on the back of that board.

Good Luck.

4473. Re: Any and All info on Kenwood TS-520

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-18 00:00:00 UTC
From: ejune@intuitive-data.com
Message-ID: <09990218005019.OUI02.ejune@intuitive-data.com>
Source record: 113709

Brandon,

The TS-520 is a great radio! During the late 70's and early 80's, it was probably the most popular radio worldwide. I have a TS-820 (basically a TS-520 with a few more bells and whistles) which I have had since 1977 and it still works fine.

No, the receiver is not general coverage, only 500 kHz on each of the bands. And, you will be limited to the "old" amateur bands (10m, 15m, 20m, 40m, 80m). The WARC bands (12m, 17m, 30m) did not exist when they were manufactured. The receiver is good, although not quite as sensitive as the modern killer radios like the FT-1000D (my current radio).

One advantage of the TS-520/TS-820 and radios of that era is that their tube driver and final amplifier stages will give you a solid 150W instead of the typical 100W in most of the newer solid-state rigs. That extra 50W can make a difference when you are in a pileup with the typical "100W and a dipole" stations. I paid quite a bit more money for my FT-1000D, vs. the FT-1000MP, just to get the extra power (200W vs. 100W) and I am glad that I did.

If you can find one, I would recommend that you get a TS-820 instead of the 520. There is one feature in the TS-820 called "IF shift" which is worth whatever the extra cost might be. When I got my new FT-1000D a few months ago, I played with all the high-tech receiver features and found that the only one that was really effective in knocking out QRM on CW or SSB was the same old IF Shift feature that Kenwood developed for the TS-820 back in the 70's! Also, the 820 will give you 160m which I believe is absent on the 520. Note that the TS-820S and the TS-820 are the same radios except that the S model includes a digital display (not at all needed in my opinion).

So I would say go for it. If your 520/820 does not provide full power when you get it, you may need to replace the driver and/or final tubes (3 total) but they are still readily available and not that expensive.

I thought my CALLSIGN was identification enough. For crying out loud, you can look up my name, street address, e-mail address and birthdate from that one piece of information alone. I don't post a reply-to address because I have no desire to be overwhelmed with spam in my mailbox.

Aside of that, it's an interesting thread. If you can somehow read it and find a way to be offended, it's YOUR problem, not mine. Democracies thrive on a free exchange of ideas. I'd not normally have responded in an off-topic newsgroup, but this is where the thread appeared. In fact, the Heston speech has been making news all over the country, so it's of some interest here.

Interestingly enough, that's one of the features of "political correctness". The new whining class demands that you not talk about something, or use their new PC terms because they find it offensive. You might want to go back and read the Heston speech.

In the mean time, stop your whining, and don't read posts that don't interest you.

This time I won't apologize.

Charlie, KS1C - that's the CALLSIGN, which completely identifies me. KS1C.

4479. FS: Freq. Counter

Source record: 113715

Hello all,

I decided to sell my frequency counter. I like it but need cash. :P
bummer. Ah well, that happens. Anyways:

It's a DSI instruments Model 5600A. I believe it came from a high-school
electronics lab downstate. It's in pretty good shape. It's 50Hz to 512MHz
in range, has a 9-digit LED display, Two inputs, and three resolution
settings. It can run off of an internal battery (don't have it, but you
can either get one or make one) or a 9-15Vdc source. I use 12v. It's a
desktop meter, about the size of a Telcom cable modem box if you're
familiar with the size of those. Hey, who isn't. :) Anyway, it's smaller
than the average VCR if you're lost on the cable modem comparisson. 3.5"
high, 8.5" wide, 9.5" deep.

Taking best offer, I'd like to start the bidding at $80.00

Thanks,
Joe.

4483. VX-5R or T8A?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-18 00:00:00 UTC
From: roro75@aol.com
Message-ID: <19990318074550.02680.00000017@ng-cg1.aol.com>
Source record: 113719

I am looking to buy a HT tri-bander, and have narrowed it to two HT's-The Yaesu VX-5R or the Icom T8A-" Actually I think these are the ONLY two out there"-- I have heard good and bad about both, mainly with the VX-5R, although I like it better because of the broader receive. Anybody have any comments on their HT's??--I usually buy from HRO, and If I get a BAD one it goes right back to them for a refund, "14 Day return policy???no returning it to Yaesu and waiting 2 or 4 weeks for me. Anyway all coments and tips will be welcome.
Thanks--Stan KC2ADC

4498. RX-320 - Free Software

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-19 00:00:00 UTC
From: mktg@ix.netcom.com
Message-ID: <3771ac3a.20581022@nntp.ix.netcom.com>
Source record: 113482

March 19, 1999

Dear RX-320 User,

Beta version C of the Flexi-Tuner software for operating
the Ten-Tec RX-320 is now available.

Many thanks to all the beta testers for their excellent
ideas. I have incorporated as many of them as possible
in this version.

The major features of the new beta version are as follows:

1. Operates the RX-320 from virtually any desktop
or laptop computer, including older 386 machines.
2. Works in either DOS or Windows (this is a DOS
program).
3. Implements 34 selectivity filters.
4. All modes: AM, USB, LSB, CW.
5. AGC implemented: Fast, Medium, Slow.
6. Tuning steps down go 1 Hz or up to 1 Mhz.
7. Adjustable squelch (operation improved).
8. Bandpass tuning (offset from center freq.)
9. Scanning using scan files. Adjustable parameters.
New! 10. Built-in scan file editor.
New! 11. S-meter.
12. Almost all parameters adjustable (great for
knob twiddlers like me).
New! 13. Improved interface (more logical).
New! 14. Tighter code for faster operation.
New! 15. Improved receiver initialization.
16. No mouse required (or supported).

I have been running the new beta version for the past
couple of weeks on an old Grid 1750 386 (25 Mhz) machine.
It is really great to put the computer on my lap or
coffee table while I sit in any easy chair and listen
to the RX-320. The program has also been tested on a
486 machine, a Pentium 166, as well as a 400 Mhz Pentium
II. It works equally well on all of them in either
DOS or windows.

I would be happy to supply free of charge this Beta version
to anyone interested who has an RX-320. The software will not
function without an RX-320.

The program is supplied along with several scan files in a single zip file. Installation and removal are simple, as the program does not affect any system settings either in DOS or windows (it does not mess with your registry, DLL's, or other system programs).

The program is easy to use - just press various keys to engage the different functions.

Installation, removal, and operating instructions are included.

If there is enough interest, the Beta version may advance into a final version. In any event, I am not aware of any major bugs in the program.

This has been a very fun project - sort of like homebrewing your own ham equipment used to be in the days of tubes and discrete components!

If you would like to receive the latest beta version, send me an e-mail at mktg@ix.netcom.com and I will send you the zip file by return e-mail.

Regards and 73,

David

>
> Thanks, Jim

I've used a T8A to work AO-27. It does *not* do cross-band
splits, but I set up adjacent memories for the two required
frequencies, and just switched between them whenever I keyed up.
Yeah, it's a pain - not a way to work a sat routinely, but
I'm not all that interested in that, just wanted to try it
one time. It worked.

Lisa, I guess you are used to a parade of operators using the same call sign.
in the LMR business. Not so in amateyur radio. You, as a guest operator in
another hams shack, should identify with their call stroke your call.

Source record: 113493

You have a good point. Since I sell on both ebay and rec.radio.swap perhaps I can explain. There are different people reading the swap newsgroup than use ebay. I would also venture to say ebay has a wider readership than any one newsgroup. I have sold things on ebay after listing them on the swap newsgroups so there must be different people on each. Of course there is overlap.
The next topic is whether it is good to post on a swap newsgroup that you have something for auction on ebay or elsewhere. My view is if you identify clearly in the heading that something is FA or FA on ebay people can just delete it if they want. It really pisses me off to see "FS neat stuff" in the heading and then open it to find it is an advertisement for "neat stuff on ebay". Even if it is really cool "neat stuff" I will not buy it if I see such crap.
Finally, This topic is a good one for this newsgroup I think because nothing is really being sold and we are discussing the issues. If I wanted to sell something or post a want ad I would use rec.radio.swap. I have learned the hard way that respect for the intent of a newsgroup is important.

The Kenwood TS 520SE was my first HF rig and I wish I had never let it
go. I wish I had kept it as a backup rig along with my TS 850SAT.
You would not go wrong and it is very forgiving, a lot moreso than the newer
rigs. 73

HI... I use a MicroWave Modules MMT 50/144 with a 2m IF and My
TS-711A... DEM also makes a 28/144 interface, if you prefer to go that
route... it is preferable to use a GOOD HF rig as an IF, as it allows
for all the functions of the IF Rig to be used on 6m or whichever band
you are working... ie. IF Shift, Auxiliary Filtering,Split operation,(
Mainly for EME), and what have you on the HF rig that some VHF rigs
don't have... you may opt for a rig like the FT-920 or the Newer ICOM
rigs etc, but MOST serious 6 meter ops use a gesignated rig for that
band ... the same should be said for 2 meters also...the thing I miss
with the TS-771A , is a CW filter... I do use external DSP, but it does
not make up for the Narrower BW you get with a 500hz etc CW Filter... 73

> **********

P.S> I originally used the TT 1208 6m /14Mhz xvrtr and was pleased with
it ... it heard much better than an IC-706... if you build or buy one,
perform the following mod...

On the main PCB you will find 2 Coaxial slide connectors that are
tab-soldered to the ground plane... desolder and remove these... using a
SMALL jewellers screwdriver remove the center insulator and connector
from the assembly.

Push the Center conductor out of the insulator , and remove the Base
SHOULDER of the insulator, using a Dremel tool or a Sharp Hobby knife,
so that the outer Shield may be flush mounted to the PCB ground plane.

Position the Shield assembly in it's original postion and place the
center insulator with the center conductor re-installed inside the
shield and verify that the base of the shield can be flush mounted while
the center assembly is also flush mounted to the PCB.
If you got it right the first time,tack solder the shield in place, and
remove the center insulator assembly.

CAREFULLY solder the entire circumference of the shield to the PCB
Ground plane.There are a few places where CAUTION is necessary. Also
solder the tabs on the underside of the board. once this is performed
you might let it cool for a minute , and then re-insert the center
insulator inside the shield and finally solder it in place...

The purpose of this mod , is to avoid leakage of the input and output signals into various stages within the transverter... QST's review of the 1208 mentions this mod, but only on one of the two connectors... I found that doing both connectors really helped to avoid hearing FALSE 20m signals on 6 meters and also helps to keep the 20m output from reaching the 6m antenna connector , and helps clean up the transmitted signal....

Good Luck and see you on 6 ... 73 de Jordan...VE2SWL/VE6....

At the moment, my HF radio is down. (has been for ~10-20 years, was
given to me a few years ago before I was licensed). I do have a 2m
multimode, so that is the reason for 2m IF. And, the cw filter is the
next thing that I plan on getting (or building), as there is not one for
my current 2m radio; I plan on just doing for the audio stage (just
before the speaker).

Michael,

I was responding to Mr. Wammes Witkop that said in his post: "Frankly, I'm Dutch. We do not like guns in the hands of citizens." Thats why my post referenced being armed. I believe our founders understood how important it was for the government to fear the people rather than the people fearing their government. Support the NRA!

Source record: 113504

A good location for info is www.tapr.org.

I am not sure about net access via packet, you would probably need
to ask locally. Remember that packet is slow, 300 baud typical
for HF, 1200 baud typical for VHF and UHF, although there is some
9600 baud activity, which requires a special TNC and a radio that
will support 9600 baud. Except for e-mail, I think that packet
is too slow for the internet, esp. the www.

Hi Shawn... you might be better off going for an external DSP unit
then... even a Timewave DSP-9+ will allow for narrow CW and also has
Noise Reduction algorithms for improved SSB and CW... also it has an
Auto Notch for Computer hets etc... the advantage of inboard IF Filters
, is their ability to limit broad band AGC response... good luck and 73

4528. FS: Tower, 90' Rohn 55G

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-19 00:00:00 UTC
From: Stan Huntting <stan@sni.net>
Message-ID: <7cv27lifl1@news-2.csn.net>
Source record: 113512
Cross-posted to:
rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

FS: Tower, 90' Rohn 55G

Nine 10' sections of Rohn 55G, extra heavy duty galvanized steel tower, in perfect condition, no rust or corrosion.
Rohn top plate with 2-1/2" thrust bearing.
Rohn rotator bracket, drilled for HyGain HDR-300 (rotator not included).
Steel mast, 6' x 2-1/2" diameter x 1/4" wall thickness.
2 ea. Rohn guy brackets with shackles.
3 sets upper and lower guy assembles using Philystran 6700 above and 5/16" galvanized steel below, insulators, turnbuckles and load balancers.
Rohn engineering drawings and specifications included.

On the ground, ready for pickup, near Boulder, CO. Install a base, three guy anchors, rotator and antenna and you're in business. Texas Towers' current price for the nine 55G sections alone is more than $2,000. What am I bid?
The complete tower goes to the best offer over $990

4529. VX-1 Band button problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-19 00:00:00 UTC
From: Tim Landers <timl@mindspring.com>
Message-ID: <36F31508.CFF03BD6@mindspring.com>
Source record: 113513

W8LN (Brian) and I were looking at his VX-1 tonight. The Band button does not function properly as either band switch or as program switch. It behaves as if it is a Down button. We tried to clone a good radio (mine) to it to see if that would help, but no luck. trying to upload the bad radio doesn't work because the Down button doesn't seem to really work either. If you hold Down, the radio won't scan, but the Up button works fine.

All other buttons look ok.

Has v 106 firmware in radio.

Any ideas?

Message-ID: <7ct28thtl1@mtinsc02.worldnet.att.net>
Source record: 113526

I've got the VX-5R and I'm very pleased with it. The only problem I've heard about is the CTCSS decode problem but since I don't use that it's not a bother for me. Haven't even tested it to see if mine has the problem.
If you plan to use it on 6 you'll need to install the antenna extension even though the manual doesn't mention this. As one of the other posters mentioned, the battery on this rig is amazing.
Haven't tired the Kenwood so can't comment about it.

Andrew,

A discussion of the relative merits of the FT-920 just came up on the CQ-Contest mail reflector. From what I read, especially the comments by N5IA who took one on DX-pedition, I would eliminate that radio from my selection list.

If you don't subscribe to that reflector, you can read the archives at http://www.contesting.com/_cq-contest/

FYI, I own a FT-1000D so I am not a Yaesu detractor in general.

We who are of the amateur botherhood are supposed to be above all that stealing
and stuff. I would expect that from the ranks of CBers. Thats just my opinion I could be wrong.

You probably are wrong.

Can you tell me if there is an oath or somthing that Amateurs MUST qualify themselves against CBers? When I listen to Ham radio I here fighting, profanity, excessive power, jamming, rude and inconsiderate people all the time. Oris, do you here them too? I noticed your reply is spread across four Newsgroups. Do you get points for that? A pat on the head? A cookie?

Mr. Lowell, and Lovely Lisa:

First it was $175 now its $150 FIRM for a 20+ year old Midland
13-513 220 Mhz. radio? At $150 Firm, you are going to learn to love
220 Mhz. from the rotten audio quality this radio is known to produce.

F.Y.I. I sold my Mint Midland 13-513 with a T.T.P. Mic and P.L. TONE
Board, at Dayton '98 for $100. I doubt they increased in value
since than.

Good Luck to you;
Donald R. Jr.

> For sale: Midland 13-513
> Asking $150.00 firm plus shipping.
> If interested email me at ka0nno@6mt.com

>more than I sell; even cash-only COD's are much more convenient for me.

If you mail someone money-order with verbal promise to ship product,
mail fraud was not committed. No law about sending money in mail.
No legal proof an agreement was made at all.

By sending COD the mail service becomes a player in the situation.
Said product was promised for X amount. If box turns out to be
full of rocks ... MAIL FRAUD.

I also would not deal with someone who wouldn't agree to COD ... best
for buyer and seller.

4563. MFJ Customer Service

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-19 00:00:00 UTC

As many of us do, we read the newsgroups just about everyday. At times we see stories about good and bad customer service from amateur radio manufacturers. I'd like to tell you about an experience I had with MFJ.

About 10 months ago I purchased a MFJ-4035MV power supply. In addition to powering my rig, I also use it to apply a charge to a car battery for emergency power. Last December, after rearranging the equipment, I accidentally reversed the polarity to the battery. Well, as to be expected, sparks flew and the supply was wiped-out. I opened the unit and found extensive damage.

I decided to send it back to MFJ around the first of the year with a letter explaining what happened and taking responsibility for the repairs. 10 days later MFJ acknowledged receipt and informed me it would be about 4-6 weeks before they could work on it. After not hearing anything for about 7-8 weeks, I e-mailed them as to its repair status. The next day their customer service e-mailed me back saying they were sorry for the delay and would get on it in the next day or so. A week later UPS delivered a new power supply to me. The documentation with it stated they could not economically repair it and were sending me a new one at no charge. They also paid the shipping.

I still have the "bad taste" left in my mouth from Kenwood after having to pay several hundred dollars to fix their PLL screw-up on a new TS-440 I purchased about 10 years ago. I assure you the radio I replaced the 440 with is not a Kenwood and the odds of my buying another Kenwood are very slim. The way MFJ handled my problem is one way of keeping customers comming back.

Yes, there is the MSTR IIe and the later MSTR III
The IIe uses same RF boards as the II.....but has a switcher
power supply and a slimmer control chassis with few switches, etc.
Color of the control shelf is black....

As an additional question, who makes transvertors for 2m to 6m? I have
a 2m multimode that I would like to use for an IF. I know Ten-Tec makes
one, who else? Downeast Microwave only makes 'em for 10m IF's. Thanks.

I just discovered that my Panoramic RA66 scope for my RACAL RA17C12 is in fact a SA77 frequency comparitor, and what is that???? I have attached a link to a few pictures of the device. If you are familiar with this unit or have any technical information about it, I would love to hear from you. If it can be interfaced with the RA17 that would be fine, if not was this part of, some "SA" series of RACAL receivers???
Thanks!!

The amateur brotherhood was established in 1946 by clandestine members of an almost forgotten religious zealot sect from the darkest corner of the Ozarks. To become a member of the "brotherhood" one would have to endure 72hrs of continuous loop audio tape, with a terse voice shouting "CONTEST-CQ-CONTEST" over and over. Once Step 1 was completed, the potential member would be led into another chamber where they would be tied to a chair, directly underneath a bucket, which - when tipped, would drop dit's and dah's on their sweaty forehead, while the "Brotherhood" choir would chant: "CODE IS GOOD, CODE IS GOD, CODE IS THE ALL POWERFUL". 48hrs later (if he was still willing), he would be led into a large room where they would dance naked around a fire, finally slaughtering a herd of pigs (thus the moniker- "Ham"), and feast upon the improperly cooked flesh. Finally, the new member would swap underwear with member sitting next to him, and swear that he would be forever above stealing or lying. And now you know......the rest of the story.

FOR SALE:

Kenwood TH-215A Handheld 2m Transceiver. Works great, looks very good. Has 10 memories, sub-audible tones, wideband RX, 5W high power and about 2 watts low power. This is a workhorse H/T without a lot of fancy features that you'll never use anyway.

Includes Kenwood speaker/mic, rubber duck antenna, 12 power cord and a copy of the owner's manual. No battery charger - has a standard plug so most any 12v charger should work. Battery pack was rebuilt last summer and is in like-new working order.

$100 shipped to your door via USPS Priority Mail. Payment by money order preferred; checks must clear bank before shipping. No international shipping.

E-mail if interested.

4573. window edge mount antenna questions

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-19 00:00:00 UTC
From: riechert@my-dejanews.com
Message-ID: <7cu1am$8ht$1@nnrp1.dejanews.com>
Source record: 113557

I've got 2 fairly large vehicles (minivan and Land Cruiser) that I'd like to equip with some sort of out side antenna for use with my dual band HT. Since they're kept in a garage, anything very tall would get in the way of going in and out of the garage. So I've been considering a window edge mount that uses the HT's antenna.

Advantages I see:
- Relatively inexpensive.
- Easily moved from one vehicle to the other.
- Stock HT antenna is short so should be able to go in/out of garage
- Easy upgrade to better HT antenna

Disadvantages I see:
- Mounts at Radio Shack and HRO have only 6-7 feet of cable
- Size of mount may prevent window from fully rolling up into the surrounding frame

Any general comments especially relative to the disadvantages I listed? Any other comments? Thanks in advance.

Jerry Riechert, KC7VTR

There is still 1st Saturday sidewalk sale just on the NE side of
downtown Dallas...but mostly PC stuff there now...

There is a 3rd Saturday sale at the Tandy Outlet store in N Ft Worth..
talk in on most Ft Worth rptrs...I will be on 444.15 rptr in the morning
if you need talk in....or check 146.94 rptr. OR call Tandy...they are
listed (the Outlet store, not the main HQ downtown!)

There may be others but Im not aware of any....yet!

Hello,

I'm trying to get my old Heathkit HW-101 operational again after years
of disuse.

After rebuilding my HW-101 VFO numerous times I finally seem to have the
mechanical stresses relieved and hope to have a stable VFO again.

But--I cannot move the slug in the VFO coil with the Radio Shack budget
alignment tools. I even sprayed contact cleaner into the coil hoping
it would loosen up. No good.
The core looks intact--but the hexagonal ID may be a bit worn from failed
attempts with bad tools.

Can anybody offer tips in getting the core free so I can adjust it and align
the VFO? I'd rather not dissasemble it again if I don't have to. :-{

Thanks!

A very simple Interface for connecting the VX5R to the
PC can be found at:

http://www.hamradio.cz/rigs/novaradia/icom/ic-q7/iface.gif

Only 2 transistors ... less the 3.00 USD inclusive cable
and connectors, you can made it in 15 minutes.

The Excelent FREEWARE Software EVE for the VX5R can be
download at:

http://www.geol.com/vx5/

Software mods for wide RX/TX are implemented, no restrictions
to enter any Frequency to the radio (read cell)

No copy protection problems.

Just FYI

4585. FS: Kenwood TK-806

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-19 00:00:00 UTC
From: TVSJR@SPRYNET.COM
Message-ID: <7cu95g$i3r$1@nnrp1.dejanews.com>
Source record: 113569
Cross-posted to: alt.radio.scanner,altalt.radio.scanner,rec.radio.amateur,rec.radio.amateur.equipment

For sale:

I have for sale eight Kenwood Tk-806 commercial/LMR radios. I have three radios which are working (tested tx and rx, carrier, pl, and dpl on both band edges) and five with various problems. I'm sure that the non-working five could be put together to make two or three good, working radios, but I don't want to worry with it. These radios are UHF, 470-490 split (I have been told that they will work 460-500, no guarantees on this though!) and 16 channels. They are very similar in function to a Motorola GM-300, with a few differences. (Couldn't find a pic, sorry...) The first difference is the size. The radios are roughly 5.5" wide x 6.5" deep x 1.5" tall. Second, the radios have an orange-backlit quasi-alpha display (eg Ch 1-Ch 16). Each channel set to repeat has a talkaround which is selectable by a single button (changing the display to Ta 1-Ta 16). Also, the front panel has a second button for monitor/open squelch, power push-on/push-off switch, volume control, scan, scan list delete/add (it's very easy to reprogram the scan in these) and REC for option boards such as DTMF decoding and tone signalling options, as well as the RJ-type mic connector and the channel-selector knob. The radios are at least 30 watts out within their bandsplit- I can't remember the exact figure but they may be up to 45 watts.These radios also support hang-up functions, programmable scan timings, TPL/DPL/InvDPL, etc.

Anyway, I would like to sell these radios as a lot. I think that $300 each for the working radios and $250 for all five of the dead ones is fair- total $1150. I think that this price is fair; if you don't, make an offer.

NOTE: I do not read these newsgroups. PLEASE E-MAIL ME AT TVSJR@SPRYNET.COM!!!!!!

Thanks
Terry

And other than the fact that fraud/theft where a money order is concerned is illegal, just how is the buyer protected?

Murder is illegal but there are stiffs in morgues all over the country who were not protected from murder by the law.

The law against murder will [hopefully] put the murderer in jail or [even better] the chair, but it won't bring the dead back to life.

If someone stings you on a deal involving a money order, then [hopefully] the law will put the perpetrator in jail but it won't get you your money back.

Prepaying with a postal money order offers "apparent" protection to the buyer, but "apparent" and "real" are frequently two very different things. It only really protects the seller.

Don't buy the Radio Shack one...the flange is too thick and uses a thick
co-ax. There are several other brands listed in Ham catalogs that use
RG-72? or some such thin co-ax and allow the window to more easily roll up.

No doubt you're right. But after researching for an hour, I must decide to take this route again, can't find your direct e-mail address. No doubt that it's my deficiency, being a non-American, an alien. Sorry for not being able to find your e-mail address...
But I will not let it stand at this.

> Aside of that, it's an interesting thread. If you can somehow read it and
> find a way to be offended, it's YOUR problem, not mine. Democracies thrive

> off-topic newsgroup, but this is where the thread appeared. In fact, the
> Heston speech has been making news all over the country, so it's of some
> interest here.

Exactly my point. All over the country. What country? Not my country! Again, this is an international newsgroup. Not an American one. So *do* try to curb yourself, please, even if takes an effort.

> Interestingly enough, that's one of the features of "political correctness".
> The new whining class demands that you not talk about something, or use
> their new PC terms because they find it offensive. You might want to go
> back and read the Heston speech.

Not the effing subject! Talk whatever you want, where it is appropriate! But *do not* spam. Simple enough, I'd think.

> In the mean time, stop your whining, and don't read posts that don't
> interest you.

Nor post in the wrong places...Now, as to whining, my pen-pal, why would you say a thing like that? Because I ask you, with a joke thrown in, to adhere to the net-etiquette? Does that single me out for this sort of verbal abuse? I am disgusted with this.

> This time I won't apologize.

And I do doubt gravely you were sincere the first time.

If you care to take this discussion - what a non-word for a one-sided shouting match - any further, please do so by e-mail. Do *not*, please, abuse the newsgroups any further in this.

Once again, my apologies to the innocent bystanders. But Charlie could not go unanswered in my book. Now, *that* would have been very political correct indeed...

Kind regards to all who's time I've taken up unsollicited,

Wammes Witkop

Well,
I would not go that far. I would suggest that if you are afraid that the person is gonna not pay for the COD, then ask as a act of good faith that they send enough money to cover the shipping and COD fee.
If they refuse then don't send it.

I sometimes request COD since it would mean my package would arrive sooner since it did not have to wait for my payment to arrive and then for it to be shipped... but on the other hand.. if you are the shipper, that just means that it would take longer to recieve your money..

Just my thoughts on the matter..

I broke into ham back in 87 with a modified cb rig. we put it on 10 meters and i used it all winter. had a blast!

since the cyle is on the rise, i thought i might put one in the samurai, but since its a ragtop, i don't wanna risk anything very valuable....

thought maybe someone might have another old cb thats been modified that i could stick in there. cb's are so cheap these days, noone much steals them, and i think that would be better than sticking a good looking new type rig there.

A ham down the road just had his mustang top cut and his radios are gone....

i can't afford a hit like that!

thanks!

i used to own a ts-430s and now i own a 706-II and i sold the 430
but all in all the 430 was a slightly better radio it had less
Intermod and images, i basically run mobile once a yr on vacation and
the 706 is lots of fun,, but for DX id prefer something better.
other than that you can not beat the bells and whistles and size of the
706. i like mine a lot, 2m op with repeater offsets is clumbsy.

Hi Gang - In case you didn't realize it, each and every one of the
follow-ups in this thread are being cross-posted to rec.radio.swap
(grrrr, Dave...). Please accept this reminder of the following item
which appears in the rec.radio.swap FAQ/charter:

"PLEASE DO NOT POST DISCUSSION ARTICLES TO REC.RADIO.SWAP. If you really
must post, please do so to the appropriate discussion group. Use email
whenever possible, especially if you feel someone has committed a breach
of etiquette."

(The full FAQ is posted by myself on the 15th of each month.)

For a smoother-running newsgroup, please abide by the rec.radio.swap
charter, ok?

Jeff WH6U (rec.radio.amateur working-group)

Boy this sure tells me that you are being ID by your call sign.

S 97.3 Definitions.
(a) The definitions of terms used in Part 97 are:
(1) Amateur operator. A person holding a written
authorization to be the control operator of an amateur station.

S 97.5 Station license required.
(1) An operator/primary station license (FCC Form 660)
issued to the person by the FCC. A primary station license is
issued only to a person, together with an operator license on the
same document. Every amateur operator licensed by the FCC must
have one, but only one, primary station license. Except a
representative of a foreign government, any person who qualifies
by examination is eligible to apply for an operator/primary
station license.

S 97.7 Control operator required.
When transmitting, each amateur station must have a control
operator. Only a person holding one of the following documents
may be the control operator of a station:
(a) An operator/primary station license (FCC Form 660)
issued to the person by the FCC.

Well the best way for all of this to stop is to be 100% honest. We who
are of the amateur botherhood are supposed to be above all that stealing
and stuff. I would expect that from the ranks of CBers.
Thats just my opinion I could be wrong.

Message-ID: <7csp5r$5e3$1@nnrp1.dejanews.com>
Source record: 113618

I have the chance to aquire an old Yaesu FT-101B. I haven't got my Tech+ yet, but I soon will. I have a couple questions and a small problem. I have no idea what the radio is worth. Could someone give me an idea as to what one is worth. Also I am sure it is fine for CW, but how is it on AM, USB, and LSB? Now for the problem. It RX's fine, but doesn't TX, and there is no manual. I have someone to fix it if I can locate a manual. Does anyone have one that they'd copy and send me, or sell me, or something?

You can run a 220 on 110V but it will sag your service. Why not
wire 220/240 for your amp? You can do this rather easily yourself.
If you can retap the amp you can wire 220/240 from your service center.

it's like this...

I ship CB equiptment and player piano rolls and supplies all over the world.

about 1% of the COD's are ever returned. also remember that sometimes it is UPS that screws up, not leaving stickers on the doors ect. UPS has sucked every since the teamsters won the strike. I wont use them if i can help it.

But if someone does refuse a package, don't sweat it. it is just part of doing busisness. Just make sure that you make them pay for the sipping before you will send them anything else. Don't punish others by this one bad egg.......or you will end up losing customers,

Kickin back
Andy

BD wrote:
>
> And why doesn't Ebay offer CC processing? They could simply deduct the
> fee's/charges and mail you the rest.
>

Because ebay isn't part of the deal. They just provide the mechanism
for bringing the buyer and seller together. The deal itself is
between the buyer and seller.

There are other companies that will do that though. TradeSafe and
i-Escrow will both take the buyers credit card, and hold the money
until the deal is completed to the buyer's satisfaction, then
forward a check to the seller - for a fee. They don't limit their
business to ebay - they would also be useful for a deal made through
the newsgroup.

I've used an escrow service as a seller, and it works quite well as
long as you've honestly described the item you're selling. The buyer
isn't too likely to back out, because he customarily has to pay the
escrow fees, and they are due whether the deal is completed or not,
and if he rejects the equipment the return shipping fees must be
paid by the buyer, so there's not a lot or risk on the seller's
part (as long as he's honest). The buyer doesn't get his money back
on a rejected deal until the equipment is safely back in the hands
of the seller, in it's original condition.

If you're really worried about who you're buying from, an escrow
service is ideal.

Links to a couple of escrow companies:

> CW versus the IC-735 would be appreciated.

Not good on the 706, hard for me to hear what I'm sending, sidetone not crisp. As I recall the 735 I wasn't thrilled with it's qsk either, noisy. Semi on the 706 with minimum delay works good. IMO

> I have also heard about intermod problems with the IC-706 on 2 metres
> and its general poor performance on 2m.

My 706 (MK-1- HI) 2 mtr, with preamp on, a few unpleasant sounds in town, but I can sit under broadcast towers on hilltops and operate with no problem. RX isn't great, preamp needs to be on to hear what other radios hear without one. It's adequate, didn't they make improvements on the Mk2? You can find some rough spots but it's a hell of a little radio. ES, everybody seems to here my almost QRP sig. GL SK ..

To anyone out there who has successfully made the interface cable,
how much did the all the parts cost??? How much time did it take???
How would you like $10 or $15 for every time someone asks
where to get an interface cable??? Come on...there's got to be some
business people out there. Make an offer to the poor people who
don't have an interface cable and don't want to contribute to the
corporate software monopoly [RT]. I see a at least a couple of
paying customers right here!!!

Good idea!!! I'd like to be able not only enter settings for each channel,
but
see and move blocks of channels around, kind of like in an Excel speadsheet.

> EVE needs more documentation on jumper settings.

I think the author can only do so much...with certain limitations.

> radio.
>

Have you subscribed to the OneList mailing list on the VX-5R? I'm
not really interested in cellular capabilities, but there have been some
extensive discussion on the mailing list. Go to OneList.com and
search for YAESUVX5. Even if you don't subscribe (it's free), you
can at least browse through the previous digests and find quite alot
of info about opening up the cellular tx/rx. I know the topic of hardware
jumper settings is still a hot topic here...international versions of the
VX-5R are being compared, and foreign users of the VX-5R are

contributing their findings on radio capabilities in the 800Mhz range.

Anyways, thanks for your input. Now all we need is an amateur radio operator to mass produce these interface cables and we'll (or at least HE will) be set...

---Vito

Does anyone know how can i connect YAESU FT-847(antenna tuner) AND ICOM AT-150.I like to make a cable to conect them if it's possible.

Thanks

Manos SV9ANJ

4636. Kenwood TM-V7A Cold Wx Fadeout

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-20 00:00:00 UTC
From: Greg Knapp <n6gk@garlic.com>
Message-ID: <7d0kl6$n3s$1@bulb.garlic.com>
Source record: 113380

I have noticed that when the temp outside gets down 40F or below, the blue background on my mobile TM-V7A faceplate readout tends to wash out to almost white or whitish-blue for the first few minutes of operation (probably until the interior of the car heats up). I find that if I take the detachable faceplate inside the house at night so it stays warm and then take it out with me, the readout is fine, with the normal blue background. Anyone else having this temperature sensitivity problem, or am I just the lucky one?

If you join ARRL you will have access to the members only web site which has an extensive listing of QST reviews of radios, all types. Alternatively, Kenwood posts some of the QST reviews on their web site for certain models.

I am a new ham too, and I bought the Kenwood TH-G71A in December and the Yaesu VX-5R this month. Both are great little handhelds. Can't go wrong with either one in my opinion, and I am sure there are others out there that are equally good.

454 and 468 kHz were ship working frequencies for some 75
years. One would think that 454 would especially be troublesome
for a 455 IF. The MF maritime band ran from 405 to 535 kHz.

i think that is a common problem, i have 3 ham friends who have v7's as well
as myself, we all experience the display problem.
i use the voice module, and microphone control. it helps do many functions
without needing to look at the display.
i also noticed if you reverse the display(blue letters on a white
background) it is a little easier to read when it is cold.
doesn't help in bright sunlight, though...

Do you know what it's called to send someone a money order in advance for "pre-payment"? It's called a gift! Just remember to research the buyer/seller and as mentioned disclosure is important with verifiable references. Another good idea is to require the shipping cost up front as per your arrangement with the party. If both the buyer and the seller know who they are dealing with and if both have been researched and checked out, you minimize the chances of becoming a victim. Just my $0.02 cents.

Gary

P.S. This message is not directed specifically at or as a response for any one post. It's a general statement made after reading the entire thread. :)

> difficulty reading.

Clint, sorry if I missunderstood you.

> I stated that the new software is SHIPPING - NOT that I had a copy in my
> hands.

No Clint, you stated:

> I am working on a head-to-head comparison of the two (actually, three)
> available programs for the VX-5R (and FT-50, VX-1R, et al).

You stated "I am working" and not "I intend to work", so with my poor
English (as you say: I have again difficulty reading) I understand
this statement so that you have the ADMS-1E and "ARE WORKING" on a
head-to-head comparison.

So please explain me how ARE YOU WORKING on a head-to-head comparison
without the ADMS-1E Software.

Please help me to improve my English language, so I don't have
"difficulty reading again"

Thank you.

PS. I am sorry for my spelling errors.

I have had one for about a year and a half and I love it. I use it for both base and mobile. I am told it sounds very good. Even with all the bells and whistles it was easy to get on the air when I first got it. There are many features I wouldn't want to do without and there are several I haven't had a chance to use yet. The repeater function is one of them. Give me time. I have had no trouble with it at all.

Let me know what you think of it if you get one.

Without wishing to appear unhelpful, this unit is probably
no more or less than a standard Z-Match.

Get a circuit diagram of a standard Z-Match from the handbook
or whatever and take it from there.

I'd happily send you a circuit diagram of the S.E.M. TranZmatch
if that would help, failing a genuine diagram turning up.

>Whoever had this unit before me has modified it very extensively and
>there is NO documentation whatsoever. Either from the original set up or
>what the unit has become.

Thing is they're so rare...I think you'll have difficulty, but hope
something turns up. It's a fine unit.

> B.B.

Free Speakers are a threat. You should have to be registered and
fingerprinted before being allowed to Speak Freely. Also, there needs to be
limits on how much Free Speech you can dispense. For example, you should
only be allowed to Speak Freely once each month, and after having waited a

week "cooling off" period. Religion is a threat. You should have to be registered and fingerprinted before being allowed to practice your Religion. Also, there needs to be limits on how much Religion you can practise. For example, you should only be allowed to practice Religion on Mondays. People who Freely Associate are a threat...

Eewww. I don't like where this is going.

also a B.B.

I read all the other replies you got and pretty much agree, except the gentleman who said it would be difficult to maintain. A service manual, available at w7fg.com, and troubleshooting skills could keep that baby running for a long time.

The TS520 was the first, 80-10 meters, no 12, 17, or 30 meter bands, tube driver and 6146B tube finals. The TS520S came next, small upgrade that added the 160 meter band. They sold the 520S for years. Just before stopping production they came out with the TS520SE. They didn't sell this for long.

The TS820 was the next step up. It included IF shift and the TS820S added a digital display (all the others were analog frequency readouts).

After the 12, 17, and 30 meter bands were added to the ham spectrum these radios were upgraded to the TS530 and TS830, basically the same radio with a few upgrades and the new bands added.

I own an Omni VI but I have a TS520S and TS820S sitting right next to it. I purchased the 520 in perfect condition for $200 and the 820 in repairable condition for $150. The Omni is a superior radio, especially the receiver, but not $2500 superior.

IMHO, you won't get a general coverage receiver in these rigs but you will get most everything else you want in a radio for next to nothing.

I'm looking for a set of two-meter duplexers. Or band pass filters that can be tunned to the 2-meter band.
If duplexers they should be the 4 or 6 can type with about 80 to 90db of isolation between Tx and Rx and with about 100 watt capability.
Let me know what you have.
Thanks.

If he did not "seal" the deal, I agree he was OK to sell it. As for taking a better deal because he was chiseled down, I must disagree. Many times I have agreed to a deal and then received a better offer. However, in keeping my word, I ate the twenty or so dollars and kept the deal.

Just my input.

4678. VX-5R: EVE and ADMS

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-20 00:00:00 UTC
From: Vito Villamor <vovillamor@earthlink.net>
Message-ID: <36F43941.C358E43@earthlink.net>
Source record: 113422

Aside from the heated debate between Goran Vlaski and Clint Bradford, I'd
like to make a comment about EVE and ADMS software.

I've been using EVE for a while now, and am grateful that the program was
created and made available when nothing else was. On the flip side, I will
most likey buy ADMS when it becomes available in my area, unless a new
version of EVE comes out that addresses a few of its shortcomings.

I think the important thing to know is what the abilities and
limitations are on both programs. Neither program has all the
capabilities that I'm looking for, so most of us will
use a combination of both.

In my humble opinion, this is what I've learned from using EVE:.
==> It isn't capable of printing a list of programmed frequencies or
settings
==> It can't give you a list of frequencies that are programmed in.
==> You can't use it unless you have or make an interface cable for it.
==> Version 1.2 didn't seem to work right for me, so I've been using an
earlier version.
==> It's free. It's author is not being paid to write or maintain it.
==> It's author is available and responsive to comments about it.
==> [Technical] support is available from more than one source,
not just from the author (let's call it Community Support).
==> It can software-modify the VX-5R for extended TX to open
the full range of frequencies in the amateur bands (and beyond, but
I really don't want to get into any legal or ethical issues here, just
technical ones).
==> The author has been accepting suggestions for future versions of
EVE, and has recognized the requests for listing and printing
frequencies. He has also informed us that development of EVE
has been postponed temporarily because he has to earn a living
(hey, don't we all? Who can blame him?)

When I buy ADMS, I will expect it to:
==> Cost about $40 for it, and get another interface cable. (I've
read about upgrades available for previous ADMS. I still
need to check on this.)
==> Display a list of frequencies and settings.
==> Print this same list.

==> Have as User Interface that's easier to use than EVE. (Eve is
pretty simple to use now, but if I'm paying for something, I
expect it to be better than something that I got for free).
==> NOT be able to extend TX range on the VX-5R.

All in all, EVE is free, can extend the TX range of the VX-5R,
but, right now, lacks the listing and printing capabilites. If and
when I buy ADMS, expect it to have list and print frequencies, and
it better have a better user interface, but I won't expect it to extend
the TX range of the VX-5R.

Once again, these are just my opinions. If you've been following
this newsgroup, than I'm sure you've seen other ADMS thread.
I hope this message is simply informative to all interested, and
intimidating to no one.

---Vito

No it's not the infamous clip problem. This has to do with the battery not charging. It takes no charge at all when it's plugged in. We're not sure if it's the radio or the battery itself. Could the battery have been shorted out via the contacts on the back somehow and that's why it wont take a charge? We are absolutely clueless.

Thanks for sharing your wisdom.

Hi Mike:

My experience is that the Molex connector that attaches the counter cord to
the rig chassis is the culprit. I had to remove the connector and use a spray
type of contact cleaner on the connection. I also scraped the pins a bit to
remove oxidation. Worked great after that. Good luck. Mike Lafferty-WA2ECA

:->Probably the most surprising aspect of Heston's
:->speech, personally, is that isn't quite the mad
:->ramble I was expecting. I might not necessarily
:->agree with him, but he's not out of line. He makes
:->good points, although I can't reconcile the NRA
:->with anything I personally believe in.
:-
:-What a SHAME that critics of the NRA so EAGERLY assume that all it's
:-about is nasty GUNS! Fact IS, the NRA is about individual freedoms
and
:-the rights of ALL, combined with access to the tools, to most
properly
:-maintain it - as outlined and established in our country's Bill of
:-Rights - the rights of INDIVIDUALS! The NRA, and its members
basically

What people fail to realize is that the "Bill of Rights" is not a document which defines rights given by the US government to its citizens. Rather, the BoR merely states for all the World to see that certain rights are inherent (inalienable) in ALL humans.

All humans, whether in the USA or Kosovo are born with the right of free speech, the right to be secure in their homes and the others spelled out in that precious document.

It is only in this country and perhaps, to a limited degree, a very few others, that our government, through the founding fathers, proclaimed that these right MAY NOT BE TAKEN AWAY! You see, God given rights may not be given by governments, they may ONLY be taken away!

We, in this country, are so very fortunate. We have had the wisdom of Jefferson, Madison, and other brave men who themselves had everything to lose and little to gain. Through them, we Americans are the most free peoples on earth.

Ask the folks in China or Kosovo just what freedom of speech is. They would look you in the eye and not be able to answer. How about the right to bear arms. We have that right (in the near term) and I carry a pistol with no fear of reprisal from law enforcement so long as I break no laws. In many other countries just having a weapon will land

you in jail, or worse!

No, my friends, the NRA is a manifestation of the BoR in its broadest meaning. FREEDOM FROM GOVERNMENT!

:-feel that without the "enforcement" capability provided by the second
:-amendment, all the rest are uninforceable when push comes to shove...
:-Sort of what would happen in civil law enforcement if we only had
:-police, but no judges or prisons to actually ENFORCE controls upon
:-those who disregard our laws.
:-
:->
:->I have to agree with Charlie. The Left has really
:->dropped the ball. It's tragic. However, we've been
:->rather quick to forget the travesties committed by
:->the two previous, republican presidents. A similar
:->litany to Charlie's of Bush's and Reagan's careers
:->would be quite impressive.
:-
:-Not sure WHERE this non-sequiter came from - Heston's comments were
:-aimed at opposing philosphies of our society, not individual
:-Presidents - did you perhaps feel a twinge of discomfort due to your
:-political affiliation?
:-
:->Speaking of other countries, is Canada hiring?
:->
:-
:-UMMmm - well, I would suppose that if you are deeply inclined to seek
:-out and become a part of a country/society more involved in the
:-idealogy that all you have, are or ever hope to be, MUST be provided
:-and controlled by a government "caretaker", Canada WOULD be a good
:-place to start...
:-
:->Sincerely,
:->
:->Neil

Clint,
Make my Day.
When you have finished the "three head-to-head comparison" Please let us know what are the results, and make sure that you provide all of the "testing" criteria...
So FAR MY Vote is STILL for the Excellent FREEWARE Software "EVE", I do not have to WAIT for it to SHIP... Oh and BTW as far as the that "bonus" interface cable the $3.25 Freeware version works well, trust me... FYI.

Howdy's

Looking for a FT-847 with FC-20 antenna tuner. Would be willing to trade a excelent condition FT-767GX HF-2meters (Built in PS, antenna tuner and ctss board) and a Fuji DS-7 digital camera (2meg card 640x480 holds up to 64 pictures, includes transfer cable and software for PC) to make up the difference. Short on space in the new shack, so the 767 has to go.

Thanks,
Grego, N8PPZ

Source record: 113443

Hello,

I have an ICOM AT-180 matching tuner for the IC-706 series. The tuner is in great working shape and comes in box. The AT-180 looks great with a IC-706/706MKII/706MKIIG as a base station setup. I purchased the AT-180 for my IC-706MKII but am finding myself going mobile most of the time. I am looking for a coupler for Marine Mobile operations....

Thanks!

I have had a lot of inquiries about the TS-940SAT that I posted last night on the group but there may be a more fun way. I am looking to buy an amplifier. Doesn't have to be a powerhouse but I am open to suggestions. How about a trade? Let me know what you might want to trade for the 940 and maybe a little cash either way.

The amp should be clean, no smokers (amps or operators)! Let me know what you have and include your telephone number so we can discuss it.

Just an idle thought I had, as I was browsing my radio books: why are so
many, and at one time nearly all, radio receivers designed to use IF
frequencies of 455 kc and/or 10.7 mc? There must be some fundamental
electronic principle that applies to this choice, I can't imagine these
IFs are only a matter of convention and interchangeability of parts. So,
how were these frequencies chosen, and why have they remained the
overwhelming favorites?

I agree. If one set of rights is comprimized, when does it stop? Geee, my company is already trying to stop the right to free speach. I got into an altercation reciently about a comment I made opposing one of the corporate scared cows. I got the usual, obligatory meeting with the 'managers". They were really laying down the law acording to them until I brought out a copy of the first ten ammendments of the constitution and proceded to read them. Wow, dead silence! Hmmmmmmmm. I asked them how much they felt violating my constitutional rights was worth to them. They became very friendly and apoligetic all of a sudden. I work for a fortune 500 company, have for 20 years, and have never seen such a degridation in individual rights as I have seen since around 1990. My point, if you do not stand up for your rights, you will loose them. I could have stood passively by and let those corporate assholes intimidate me and feel they got away with it. But, I would have set a corporate wide precident. As we all know, our legal system is based on earlier interpretations of the laws or precidents. If I would have caved in, then the company would have felt free to violate the rights of others. Now, I am making them rethink some of their policies. Now that they know they may have to shell out for a huge law suit, some of their policies may no longer look quite so attractive.

It is up to each and everyone of us to blow the whistle on violations of our constitutional rights. If we don't, and we let them get away with it long enough, then we will loose those rights. This is essentially why the NRA lobbies so strongly against ANY gun control. I'm sure that some of it makes sence to them, but if they cave in to any comprimise with respect to our rights, then again I ask, where will it stop? How long before you can't have a certain weapon, or whatever because some fool used one in a hold up? How long before you loose the right to keep and bear arms? or in my case, how long before I loose the right of free speach?

B.B.

4714. IC-706MkII vs. IC-735 for CW

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-20 00:00:00 UTC
From: gagnon@gagnon.fakeu-net.com
Message-ID: <36f37e13.2237645@news.u-net.com>
Source record: 113460

I am considering selling my IC-735 for an IC-706MkII, basically to do a lot of travelling and mobile CW. Any comments about the general performance of the IC-706, especially with respect to QSK high speed CW versus the IC-735 would be appreciated.

I have also heard about intermod problems with the IC-706 on 2 metres and its general poor performance on 2m. Any comments on that would also be appreciated because I was also thinking of selling my FT-2500M if the IC-706 is OK for 2m work....

Cheers...Larry Gagnon MW0AWC

There's also 9 MHz.

International, commercial and military and amateur transmitters, after many years of gentlemen's undersatanding and agreement, don't transmit on frequencies reserved for receiver intermediate frequencies. It makes for less expensive receiver design.

455 and 465 came about because they lie between the long wave and medium wave broadcast bands. They are high enough to make second-channel interference not to difficult to get rid of.

9MHz is high enough to get rid of 2nd-channel interference on the shortwave bands. Sometimes 455 KHz is used on the cheaper SW broadcast receivers and 2nd-channel interference shows up with strong broadcast stations being heard twice - seperated on the dial by twice the IF.

And 10.7 MHz is fine for VHF FM. It falls in between the principal SW bands. It is also related to VHF broadcasting channel spacing. The bandwidth for FM broadcasting is 150 KHz and so must be the receiver IF transformers. This broadband made the choice of IF for FM broadcast receivers a little more difficult and ruled out 9MHz for that purpose.

IF standardisation also makes life easier for radio receiver designers and permits bigger bank balances for radio receiver purchasers.

********* "RARSfest 99" *********

THE RALEIGH HAMFEST
and COMPUTER FAIR

SUNDAY, APRIL 11

NORTH CAROLINA STATE FAIRGROUNDS, RALEIGH

3000 attended last year! Giant, indoor flea market, plus plenty of
dealer and manufacturer booths, contests, meetings and forums, prizes,
VE Exams, and the famous "Saturday Night Social." Special demonstration
of HDTV (High Definition Digital Television) by WRAL-TV!

PRIZES: GRAND PRIZE: Icom 706 MKII HF/VHF
5 HOURLY PRIZES: Icom 207H Dual-Band Mobiles -
One Each Hour, 10 till 2 PM.
Pre-Registration: $125 CASH!
(winners do not have to be present)

Location: North Carolina State Fairgrounds, Jim Graham Building.
Follow the Interstate 440 Beltline around Raleigh, to
exit 3 - Hillsboro St., and go west one mile to the
Fairgrounds. The Jim Graham building is at the
Southwest corner of the fairgrounds, just off
Hillsboro St.

Date/Time: SUNDAY, April 11, 1999, 8 am to 4 pm.
Building opens at noon Saturday and 6 am Sunday for
dealer/vendor setup.

Admission: Pre-register: $5 (before April 2nd). Gate: $6.

Flea Market: Table/2 chairs: $10
(5 or more tables: $9 each).
120 Volt AC: $15 per connection.
Drive-In unloading/loading. Bring your own
extension cords and carts.

Parking: FREE on site!

Talk-In: 146.64 (147.15 is the backup)

VE Exams: Given in the Holshouser building on the Fairgrounds.
Walk-in registration and testing begin promptly at 11 a.m.
You must show a picture ID to register. Exams are $6.45.
Contact: Charlie W4VFJ, 919-556-8551 (exam information
only please) email: w4vfj@aol.com.

Meetings: ARRL Forum with Roanoke Division staff, Army and Navy MARS,

NTS, ARES, APRS and QRP forums. Times will be announced at
the Hamfest. No DXCC QSL card checking this year.

Mobile, Cash Prizes for Homebrew, Mobile HF and VHF Installation,
Homebrew, QLF (left foot) and QBH (Both Hips).
QLF/QBH Contact: Rick KA3PSK, 919-870-8268.
Contests

General The NC State Fairgrounds hosts a permanent, general-
Flea- merchandise flea-market just outside the hamfest building.
Market: Admission to that flea-market is FREE!

Family Come make it a family event! Other activities available in
Activities: the area include the Fairgrounds Flea Market (free) and
Azalea Sale. A short drive offers Crabtree Valley Mall,
Blue Ridge Cinemas and NC Museum of Art.

Address: For tickets, tables, etc., make checks payable to
"RARSfest." Include your name, call, address,
and S.A.S.E !! Mail to:

Wilbur Goss
4425 Watkins Rd.
Raleigh, NC 27616

Requests received after April 2nd, or without S.A.S.E.,
will be held at the flea-market vendor door on the west
side of the building.

Hi There,

I have been sent diagrams of a KW 107 by one most helpful amateur but this does not appear to bear any great resemblance to the ATU I have stripped on the bench.

Does ANYBODY have a layout diagram for a KW E-ZEE match ATU please ?

Whoever had this unit before me has modified it very extensively and there is NO documentation whatsoever. Either from the original set up or what the unit has become.

Many of the joints inside the unit have been changed (that much at least is obvious) but where they went originally remains completely unclear.

Most of the connections that have been altered are around the input inductor area. I suspect even the routing of the 'leads' is not original.

Any help would be appreciated. Photos of the innards of a known working unit, diagrams or sketches. This thing is basically a mess and I would like to try and get it to work properly again.

In your blind, fanatical desire to dismiss anything I post, you again have difficulty reading.

I stated that the new software is SHIPPING - NOT that I had a copy in my hands.

You make it difficult to want to take you and your software efforts seriously.

I am enjoying the heck out of mine, John! But I would *not* recommend it as one's first and only HT...

I happen to live in a region where I can hit scores of repeaters with the VX-1R and its 1/2 Watt output. You might not.

Know what you want to do, and purchase equipment accordingly. Your local Amateur Radio club will be able to help YOU in YOUR area!

I doubt you will have problems. Try em out and see how they neutralize.
If any problems , it will probably be on ten meters. You MUST
reneutralize when you change the tubes. But it's pretty easy. All you
are doing is adjusting for maximum output at the same tune setting as
minimum plate/IP current. MK

I would NOT do it. It might handle it , but it's hard on it. Get an
outboard relay and sleep better at night knowing the relay in the rig
will last a long time. MK

From: oe1mha <oe1mha@aon.at>
Message-ID: <7d2o26$7ke10@WS01IS04.highway.telekom.at>
Source record: 113229

Well,
I have a TS50s from Kenwood and want to use a ATAS100 antenna with it.
SO I think the antenna just incorporates a DC-motor for -+12Volt and a DC/HF splitter.
I asume, that if you connect it to +12Volt, the motor runs in one direction and if you reverse polarity it tunes in the other direction.?!
So it should be relatively easy to build a external tuning control box.
any comments??

Date: 1999-03-21 00:00:00 UTC
From: kr4wmNO@SPAMbigfoot.com
Message-ID: <MPG.115eca5127fdf2439896b5@news.infoave.net>
Source record: 113244

I got one free with my Yaesu FT-847, thinking I could use it with my Icom-735, which is my mobile HF rig. The instructions that come with the antenna state that it will work ONLY with the Yaesu FT-847. Has anyone successfully adapted this antenna for use with other radios? What's it's MO? (Method of operation) I'm thinking the radio sends DC down the coax to provide motor power, and at the same time senses SWR. If so, this antenna is useless to me. Perhaps I'll modify it and bring a separate motor control wire out of the housing somehow.

I'm thinking "what was Yaesu thinking?". What kind of an idiot would mobile a new $1700 radio? Their ads state "designed for the FT-847, but there is no disclaimer that states it will not work with other radios! I think I smell some misleading advertising.....especially since the antenna is available separately for $350! It's also limited to 120 watts of RF, in case you're wondering.

Thanks for any info, -Web in Myrtle Beach, SC

Mike,

They share batteries and the chargers, but NOT the antenna!
The FT50 has a SMA connector, the FT10 has a sort of reverse SMA
connector.
I have both.... I've never seen an optional antenna for the FT10 due to
the odd SMA tho Yaesu sells a BNC adaptor for it.

Source record: 113253
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc

I think Paul's calculation wasn't quite right. The formula
(Range to Horizon) = 1.4 * sqrt (height in feet)
wasn't quite used in the correct context. Paul's sum calculated the
theoretical range to horizon for an antenna at just 5 ft height. If it
were
already above the ground, and just raised ANOTHER 5 feet, the INCREASE
in range is different. Note also that even in the ideal case, the range
calculated this way for your antenna has to be added to the range
calculated from the same formula for the other station.

e.g. if the antenna height is now 15 feet, the theoretical range to
horizon is about 1.4*sqrt(15) or 5.4 miles.
If the antenna height is now increased by 5 feet to 20 feet, the
theoretical line of sight to horizon becomes about 1.4*sqrt(20), or 6.3
miles,
an increase of 0.9 miles.

If the height were originally 30 feet, increasing that to 35 feet
would
change the theoretical line of sight to horizon from 7.7 miles to 8.3,
an increase of 0.8 miles. So, the higher the antenna is to start off
with, the less difference adding an additional 5 feet will make.

However, all the above is too theoretical; the range equation only
gives a rough guide, ignoring the local topology, tropospheric
propagation, diffraction and so on. In practice, raising the VHF/UHF
antenna 5 feet might allow it to clear a local obstruction, so making
quite a significant difference, but it just depends on the local
conditions.

It is designed to operate with both the FT-847 and FT-100 radios. As for
operation with other radios, it is certainly possible, but would require an
interface. Apparently, if the dealer displays are correct, the ATAS-100
uses several DC steps for its operation, something like 10 volts for up and
8 volts for down.(or vice-versa) I think the radios themselves calculate
the
reflected power to determine resonant position. I have had no luck getting
any technical details from Yaesu on the exact voltages required, however.

I have a 706MkII and use it mostly on SSB and always mobile. Excellent for that purpose.

Have not used it TX on CW, but is good on RX. But would not swap it for my base rig on CW.

On Two meters, the PL is very annoying (to the listener!), and I know of no fix; but since I have a Kenwood tri-bander in the car, not an issue for me.

Bottom line: There are lots of them out there. Find a friend who has one and use it; you alone can judge what you want/need.

Does anyone know how to modify the AEA DSP-2232 in order to get the best
of it when you operate the birds at 9600??. I've heard there is
something I can do to enhance it.
Please, make your comments to chondeville@hotmail.com

73,
Christian

4782. Re: ~Slinkiey Antenna Plans Needed~

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-21 00:00:00 UTC
From: rdmw6kj <rdmw6kj@succeed.net>
Message-ID: <922040823.542.69@news.remarQ.com>
Source record: 113278

Hi Sam,
I used the slinky for a time in Maryland. It was a simple antenna to put up, and I used a tuner of course, so every time I used it, I had to retune. Mine was strung over 65 feet about 40 feet in the air, with the ends sloping down to about 18 feet. It was a terrible antenna. I used the supplied nylon cord in the center of the slinky (as directed), and RG-8 to feed it. Everything else I tried worked better, including a hy-gain 18avq, a homebrew short dipole with homemade coils in the center, and a Mor-gain 40/80 meter dipole, which I used the longest. The slinky idea might be better on the higher bands, but I did not need it there. I needed it nightly on the 75 meter traffic net, and whenever I switched to any other antenna, everyone on the net would tell me how much better it was than the slinky. I had some independent tests too, just to make sure I wasn't hearing a "net prejudice" situation.
The only antenna that did not outperform the slinky was my trusty old low power hustler mobile. At the time I also had a Swantenna mod 55 on my van, and it outperformed the slinky.
Good luck.

Source record: 113279

I evaluated both rigs at the local Ham Radio Outlet last year when I had to make the same decision. I tested both radios using the same antenna -- the ICOM 756 is easily the superior radio. I bought one about a year ago and it has been a great. You might want to get the FL-100 CW filter at the same time -- it really helps in the pileups.

Source record: 113292

welcome to ham radio
i used to use a ts 130s and found it to be a great rig
i also ran mine off of batteries charged by solar panels
i never did any measuring to indicate how much current it was drawing on transmit, but the rig does have a function on the s-meter to let you know how much it is drawing.
if memory serves, current consumption on transmit at high power ssb mode was something like 11 amps. that would indicate an output of about 120-130 watts at 12 volts. you can adjust output down so as not to use so much power.
the rig only provides usb or lsb for voice work, and of course cw.
coverage is limited to the ham bands only. i don't think the rig can even be modified to operate outside the bands.
it is a good quality rig, most definitely servicable (considering the complexity of todays rigs). also will outperform some more modern rigs (output power).
it does require time to warm up. the vfo is not fully stable until it has been on for a few minutes (similar to the old crystal sets).
thats about all i can tell you. a great starter rig.

> another hams shack, should identify with their call stroke your call.

No. Read 97.119(e) Appending my call to another when I am a designated control operator of another ham's station is only required if my operating privileges exceed his.

97.119(e) "When the *OPERATOR LICENSE* class held by the control operator exceeds that of the *STATION LICENSEE*, an indicator consisting of the call sign assigned to the control operator's *STATION* must be inlcuded after the call sign" (My emphasis)

This is only an issue if you are actually operating outside the station licensee's operating privileges. The format would be to use the station's call stroke my station call. 97.119 is full of referal to call signs as being assigned to stations.

And yes I am used to a "parade of operators" using the same call sign in the LMR business. But I am also used to a "parade of operators" using the same amateur station call sign at club stations, special events, field day, etc. The only difference between amateur and LMR is that amateurs are required to have an operator license in addition to the station license.

>
> > And you can't get my street address with my call sign. I don't even

Jumping to conclusions here. The address associated with my license is a current mailing address. It's not time for me to do anything, thank you - I am sure that your reminder was sincere.

Regards

You make it really hard to try to give you any respect and be completely objective about your work, Vlaski, with your continued nonsense.

I mean, did I come to this public newsgroup and state that your VX-1R program had a flaw that made it unusable for my very stable system? No - I privately emailed you and asked questions. I desired to find out from you personally what I could not locate in the program's documentation. I was going to give you the benefit of the doubt...

That must be the difference between the two of us...I would rather keep negative product comments private until worked out - and post the positive experiences immediately. You, on the other hand, are so bent on your anti-RTSystems campaign that you cannot accept any positive comments about RT Systems.

> What about the other part of my message, please answer me...

It's already deleted...I have no desire to answer much more of your messages.

Hi Mike,

I understand they are having some problems with the product. It costs around $400 complete and only covers 40 through 10 meters with no WARC bands. For example, one of my customers told me that they would lockup in freezing weather.

73, Jim KB6SX

Looking for anyone who has built this radio kit or
has seen a review or has any info on it. What is the
performance like? Is it a good rig or a piece of junk?
I have looked on the web for info and could find
no reference about this kit at all. I feel the need to
build something and this could be a neat project
for me and useful too.

Thanks,
Randy KB8ASO Milan, In

80 Meter Centennial SSB Transceiver
By Paul Daulton K5WMS

Full band coverage (500KC), 3 to 5 Watt output, 4" X 7 5/8"
Silkscreened Board, 3 Pole Crystal Filter, and
Varactor Diode Tuned with a 10 Turn Pot.

All you have to furnish is your favorite cabinet, knobs and
the connectors you like.

Dan furnishes board, all board mounted components, 10 turn
pot, Audio Pot with switch, and instruction manual.

Dan's price $69.95

Singer Gerstch FM 9 SERVICE MONITOR, covers 30mhz thru UHF. Syntithized freq select. Unit looks good shape but only partly operational. (freq standard is ok). Highest offer over $50. + shipping. I have a book on this so it can be fixed.

Triplett 3490A Lab quality transister analyzer in a 20" suitcase. In very, very nice condition. I just ever use it. If you want to run curves on power transisters, I believe this unit will do it. Unusual piece of equipment. $150. + shipping

SWR bridge on 19" x 4" panel with meter. Made by GE for use in VHF/UHF, "N"connectors. Same quality as a Bird watmeter. Has some circuit on panel for mabe alarm remote but this in no way will affect the operation of meter for local use. $40. + shipping.

Conair 221 tube tester. Compact suitcase that covers popular tubes including compactrons. Nice condition. I have used this myself & works well. Suitcase is fair to good condition. $60. + shipping.

I purchased a partial kit (PC board, crystals, and ICs) and built the kit about a year and a half ago. The rig has adequate sensitivity, clear audio on transmit and receive, and the receive current drain is only about 35 mA. After checking out the transceiver, I made the following modifications:

1. The author of the plans seemed to have a misunderstanding of how you measure PEP. He talked about measuring peak-to-peak voltage across a 50 ohm resistor, squaring it, and dividing by 50 to get PEP. He left out a factor of 8. At the time I bought the kit, it was advertised as having 5 to 8 watts output, but mine would only put out about 5/8 to 1 watt PEP. I used a voltage doubling transformer between the output transistor and the filter to bring the PEP up to about 3 watts with a 13-volt supply.

2. The VFO uses a type 2 (red) toroid core for the inductor. Substituting a type 6 (yellow) core (and adding a couple of turns to get the same inductance) improves the temperature stability by a factor of about 3.

3. The VFO inductor is very close to the T-R switching relay and experiences a slight inductance change due to the stray magnetic field. To minimize the amount of frequency shift between transmit and receive, it was necessary to rotate the inductor until the best position was found.

Possibly some of these design flaws have been corrected since I built my kit.

> I just wonder how much ?
>

They are fixed channel units, are superb performers, many aussies relying upon them for their lives as they travel in the outback. They have 7 fixed frequencies within the range. The output drops off as the frequency gets higher.

They cost about as much as 3 SGC-2020's and are 1/2 its size and outperform the 2020 about 75 times to one. I've used one for QRP for about 4 months as well as relying uppon it to call for supply and rescue from the jungles and non-populated areas of Brazil. It works superbly after being "drowned" several times in river crossings, dropped from the canopy (120 feet) onto a hardwood tree root, and with the broken mike pieced together with hardened tree sap. A great little unit and, like surplus modern "mil-spec" mil surplus stuff, very pricey but you can bet your ass on it.

P.S. The spate of Japanese handhelds calling themselves "mil-spec" are poor bad jokes that could get you killed if you were foolish enough to rely on them for much more than Family Radio Service equipment on the ham band. I have done work which required me to put my life in the hands of my radio sets. I use "real" mil-spec stuff and after almost 40 years as a "mercenary" I'm still around. My favorite best radio ever is the AN/GRC-9, which I still use if I don't have to pack it a long ways and I've never ever been let down by the AN/GRC-109 "spy set", though the damned thing is a bit bulky, gangly, and heavy.

For "modern" comms use in "busy" areas the Transworld TR-100 sets just work and work and work. A used one sells for $2200, will cost $75-300 for a Transworld "re-work/tune up" and you can safely bet your butt on it for the next ten years. 1.5-30 Mhz LSB, USB, CW, C-AM. It'll tune a paper clip or a 6 elememt yagi and comes shock mounted in its own aluminum water-tite brief case or (real) mil-spec box (130 REAL watts) or less.

This type unit will cost you about $5-800 more than the Q-MAC and is about 50 times better, though 10 times the size and 5 times the weight.

at one time that was also the case in amateur radio -- you had to get a call
for every station location.

However, at some point in the past, things like secondary and club licenses
were pulled and the call you used was the call you were assigned for your
home station. this is probably where the operators started thinking of calls
= name...

The radio was his until he got your check. He was well within his rights to
sell it.
Moreover, you apparently did not "seal the deal" by letting him know. Last,
you
chiseled him down so he probably took a better offer.

Jim,

I have a TR-7800 that I bought new back in 1980. In fact I have two
service manuals for it but only one operator's manual.

If I can find the operator's manual I will make a copy of it for you
but I need your address. Send an Email to k4wj@att.net with the
information and I will make a copy of the operators manual.

Message-ID: <7d1h6l$m23$2@plug.news.pipex.net>
Source record: 113346

Hi

I'm looking for a nice 1960's / 70's communications receiver (or even early 80's analogue sets) - anything considered, but must be capable of resolving SSB as well as AM, preferably general coverage (but will also consider ham bands only). Unit must be in very good condition or better, fully working, with original knobs etc. Would prefer something with plenty of life left in the valves, but if the price is right I may be more flexible on this. Cash waiting for the right radio...

Cheers

I bought an old Model 444 Shure microphone at a hamfest. I'm using it with a Ten-Tec Triton IV which requires a high impedence mike input. I notice that I have to turn the mike gain control really high to get adequate audio. Am I correct in assuming that the original Shure 444 is a low-impedence mike? I think Shure later made a 444D which was dual impedence, high and low. Is this correct?

I would install both, and comparing them by switching between
them all the time, why "only one program at a time" ?

Hmmm , Clint, perhaps my English is really not so good, so
please correct me.

If you say that:
You have ONLY EVE, and you are writing about it, I would say
that you are writing a REWIEW about EVE.

But if you say:
> I am working on a head-to-head comparison of the two (actually, three)
^^^^^^^^ ^^^^^^^^^^^^^^^^^^^^^^^^ ^^^
> available programs for the VX-5R (and FT-50, VX-1R, et al).

I would assume that you have BOTH programs and are comparing them.
So I am understanding that sentence, with my poor English.

So, is my English so bad that I can not understand you
or have you not expressed yourself right ???

> Geeze, you're suspicious.

No Clint, but maybe you should speak in a more simple way so
I can understand you, you know I have reading difficultys.

PS. How did you find out that ADMS-1E is shipping ?

Would LOVE to see more than one (RT) choice for this! Don't want to
spend $40 just to get the cable! I guess I could make one, but if I
could get for $10 +/- would rather just buy it.

snip
> ==> Display a list of frequencies and settings.
> ==> Print this same list.

>

I've tried EVE on the VX-5. Also tried Goran Vlaski's vx1rv100.exe.

I think what would REALLY help is the ability to export your freq's and
settings to a spreadsheet-readable (read: NON-proprietary, NON-binary)
format and re-import this to load back into EVE. Second choice would be
to use a text file format to allow search/replace. Either could allow
you to organize AND print your data! Maybe have ability to export
channels to one file and global settings to another.

I like EVE, but it and AMDS both show just one channel at a time. EVE
needs more documentation on jumper settings. Anyone know how to unblock
cellular without setting it to FREE? I don't want out-of-band transmit
(for now). I tried to look at one document and compare the solder
jumpers (seems there are eight) to the jumper value, but it didn't seem
to correlate. BTW- I set the virtual jumper to 255, it opened tx and
allows cellular rx, but then couldn't reload data until I reset the
radio.

4846. Re: Any and All info on Kenwood TS-520

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-21 00:00:00 UTC
From: "Mark E. Curran" <ki7wx@home.com>
Message-ID: <36F4922D.40615E1D@home.com>
Source record: 113359

Fun thread. Realize the original query was about
the TS-520, but am surprised nobody suggested a
step up to a 530S or 830S. One person noted
they were the next iteration HF rigs from Kenwood
with a few additions. During the mid-80s I spent a
lot of time in front of various 820s, 830s and felt
the 530s and 830s were much improved over the X20's

For a small additional investment for a 530S or 830S
over the 520/820 you obtain the same solid reliability
plus the WARC bands and a digital frequency readout.
830S is better on receive than either X20 too.
Seems worth it to me. I've had my 530S for 13 years
with no trouble and an 830S for many as well. I
plan to sell them soon and go to an FT-1000MP but will
probably regret it 25 years from now .... ..

Will either of these pieces of software support reading and writing
frequency programming info from/to a plain ASCII file?

I have the older ADMS-1C and it does not appear to support this.
It's *extremely* tedious using its graphical interface to enter (say)
50 memories worth of data, when all of the data either already exists
in a database somewhere, or is sufficiently regular that it could
be generated in a spreadsheet in a few seconds.

Yes, I know that once I've entered the data once, it's easy to swap
different files in and out of the radio. The point is that I don't
want the programming to be so tedious in the first place. With ASCII
file reading capability, I could use a resonable tool to build the
frequency list and then just read it into the programming software.

Hello,

I have the following Drake equipment for sale.....
All prices include shipping in CONUS

1. TR4-Cw - immaculate condition both inside and out.
comes with MS-4/AC-4 in equally nice shape.
w/manual
$350.00

2. WH-7 - wattmeter. Looks new. Newer vinyl clad case
No manual but have SWR conversion card.
$100.00

3. W-4 - wattmeter. Has a few scuff marks on sides but
face is excellent. No manual
$65.00

4. TR-4 - 26,000 series. Face is 8.5 on scale of 10. Nice
blue meter filters. Top case appears to have been
repainted but looks nice. All tubes check O.K. but
has problem in 9mhz I.F.(I believe) I have no
test equipment to trouble shoot but too nice to
part out... Radio only - no power supply
$100.00

Hi

I'm looking for a new two meter VHF radio and would therefor like to
hear about your experience (or comments) with any of the following
radios.

Yaesu FT-3000
Icom IC-2100H
Yaesu FT-2500

What is good or what is bad?
Have you got any problems with any of the radios?

I look forward to hear from you,

Best 73s from
Karsten oz2kmp

Im happy with my new IC-746. Works great on ssb, and is a blast on cw. Best price in the US was 1510 DELIVERED by Ham Station in In. Texas Towers couldnt come close, and I would have had to pay big $$ in taxes since Im local for them.

Search for the term, ADMS, in this messagegroup. You'll find links to Goran's Freeware from Germany, the .EVE Freeware program, and the commercial RT Systems' ADMS software package.

Tells the age and the order made. As a general rule the first number
stands for the year on kenwoods. Being your's is a 930s with a 4 mil
number means it was made in 1984. MK

I am writing reviews of the three software programs currently available for us to program our Yaesu VX-1R, FT-50, and VX-5R HTs.

If you have ANY comments as to the installation and running of your program(s) of choice, I would like to hear from you.

Had a support problem? Love - or dislike - the included documentation? Any comments are welcome.

1. All submissions will be kept anonymous...UNLESS you specifically want your name and email included in the final product. (In the past, those who "discovered" undocumented features like to be ackowledged, for example.)

2. The owners/authors of each of the three software packages will be given a chance to review/comment/critique the final product BEFORE it is published on the Internet.

3. This is a non-commercial endeavor. I am not publishing for profit - merely posting on a hobbyist Web site. Can't pay you for any submissions - sorry! <g>

PLEASE DO *NOT* SEND YOUR IDEAS AND COMMENTS HERE. PLEASE USE PRIVATE EMAIL.

sbynum@earthlink.net says...

> 2. The AL811H amp comes stock wired for 110v....does it really work ok at
> 110v {i dont have 220v but could have it if really needed}.

To answer this question, I pulled this from the Al-811H manual.

Power Connections

The AL-811H is supplied with a NEMA 5-15P plug for 120V
operation. The power required to
operate the AL-811H/HY is not high enough to warrant 240V
operation unless 120V is not
available. The fuses should be 12 ampere fuses for 120V and
must be changed to 8 amperes for
240V operation. The diagram at the right shows the proper
wiring for 120V operation.

Hope this helps.

4875. Antenna-Mobile or HT?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-22 00:00:00 UTC
From: Vito Villamor <vovillamor@yahoo.com>
Message-ID: <36F6A3FA.CAC889F1@yahoo.com>
Source record: 113138

Looking for an inexpensive antenna setup to use with my
tri-band(6M/2M/70cm) HT in my truck.

I'm looking at mobile antennas (mainly just dual-band).
I don't want to get a mag-mount because of security reasons.
It looks like the entry-level dual band antennas get
a gain of at least 2 & 4 dBi on 2m and 70cm. They start
at about $50. Add to this the cost of a mount and cable
and I'm up to at least $100.

I'm also looking at HT dua- band antennas. The better
antennas get about the same gain as the entry-level
mobile mount, and cost less than %50. I was looking
into a mount and cable that clips onto a window, with
the the antenna on the outside. I can get into something
like this for about $60, and can use the antenna on my
HT (if I ever wanted to).

Are there any drawbacks to using the HT antenna clipped to
one of my windows? I mean I get about the same amount of
gain that I would from the lease expensive mobile antenna,
but at a cheaper price. Are there any other considerations
that I should know?

Eventually I will get a full-fledged tri-band mobile antenna,
but for now I looking at just using the highest gain dual-band
HT antenna because of the cost. [The tri-band antenna I'm
looking at (Comet SB-15) runs $90 without mount and cable.]

Any responses will be appreciated...please e-mail me if
you need more information about my setup.

---Vito

4876. For Sale: Heath SB-200 Amp

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-22 00:00:00 UTC
From: kb6luc@aol.com
Message-ID: <19990322154652.11933.00000150@ng65.aol.com>
Source record: 113139

I wish I could keep this, but I am upgrading to a full-legal-limit amp. To finance it, I am selling my SB-200 HF Amplifier, which is in very nice condition. Exterior is in 8.5 out of 10 condition [a few nicks on front edge]. Interior is clean and 9.9 out of 10. Electrically the amp is 10 out of 10.This SB-200 was one of last ones made by Heath and has a high serial #. It was purchased in 1978. 1.5 years ago the fan/motor assembly was replaced [part# fm-200] by Harbach Electronics. I just bought new tubes for this amp on 3-11-99. The tubes I bought are the best available...Svetlana 572B's purchased from RF Parts for $135 delivered for the matched pair. Original manual included. Here is the PEP OUTPUT {NOT INPUT} read with a Bird watt meter {1000 watt slug} at 110v. 75/80 meters 800+ watts, 40 meters 800+ watts, 30 meters 500+ watts, 20 meters 800+ watts, 17 meters 700+ watts, 15 meters 700+ watts, 12 meters 700+ watts, 10 meters 650+ watts.

PRICE $375 OBO. I live in the San Jose, Ca. area and prefer a local pickup or may be willing to drive 30 to 45 minutes to meet half way, but shipping is posible for an extra charge, since the amp weighs 35 pounds. 73 de Tom, KB6LUC@aol.com

Hi

I have for sale a VX-1R, includes the standard accessories and
the auto cig. lighter adapter, a leather case, the AA battery adapter.

The radio oerates flawlessly and is in great condition.
The leather case is a little worn but the radio is in like new condition.

The firmware version is 105.
It has been modifed for wide band receive and transmit.

$190 shipped in the US.

Thanks
Byron

You are right to check and do as much refference checking as you can about a trading or selling contact. I can't believe that at 58 yrs of age I was as naive as a child on a 'trade amp for radio' deal. I am out a great L4B amplifier. I may purchase something here again but it will be a credit card purchase or COD to my door. Right now I am more upset with myself over this than I can possibly relate to anyone.
I am going to wait a few days, organise my thoughts, before publishing the details of my careless and over trusting missadventure. I will need to let the HF trader nets know of this also. This isn't the only place you get the shaft from blind trust.

If you don't want Bass use a D-104 an Amplified (the Amp provides matching) Lollipop.
The best combination was a Stock D-104 through a line level (no Amp) Mic Equalizer.
You could than "tailor" the EQ to the individual users. I'm using the Amp D-104.

From here down is "taglines" in case you don't care to read them!

Amerikan Leadership: Over 250,000,000 Americans are being led by
a man who doesn't know the meaning of "is", "sex", or "alone"!

Amerikan Progress: In just over 200 years we went from a
president who could not tell a lie to one who can not tell the
truth!

Amerikan Strength: The "most powerful man in the world" doesn't
have the strength to keep his zipper up!

Amerikan Justice: Burn the Branch Davidians for their
non-politically correct theology and acquit Bill Clinton of
perjury and obstruction of justice!

Amerikan Headquarters: There are only two characters difference
in whORe house and whITe house. Guess which two characters we
need to get out of the whore house to turn it back into the White
House!

Hi,
I have an Icom 730 HF mobile + accessories for sale. All solid state
AM/SSB/CW
at 100W PEP output (25W on AM). Covers 80/40/30/20/17/15/12/10 meter
ham bands. Digital freq readout. Dual VFO's for split freq operation.
Speech Processor. Pass band tuning. Vox. Very nice cosmetic, perfect
electrical condition. Runs from 13.8VDC at 20 Amps. Front panel meter
monitors S/RF/SWR. Includes all optional filters
(ssb and cw) for improved receiver performance.

Includes: - Icom 730 HF transceiver
- Icom HM-7 preamplified hand microphone
- Icom MB-730 mobile mounting bracket (rig used mobile only
twice)
- Icom FL-30 Narrow SSB Filter
- Icom FL-44 Narrow CW Filter (500Hz)
- Icom frequency calibrator/marker board
- Icom 730 Service Manual (never used, but bought it just in case)

I can demo this on the air - CW or SSB, your choice.
Price: $395 + some help with shipping

Thanks,
Joe K7JOE
Portland Oregon

(I also have a matching Icom AH-1 automatic random wire matcher for $80
if interested)

What better way is there to start off your morning except by drinking a cup of coffee using your very own CALLSIGN MUG. See at http://home.earthlink.net/~jawjabber
All mugs are made with quality control in mind. They are dishwasher and microwave safe and if after you receive your mug you are unsatisfied just send the mug back in its original shipping container and I will refund you the cost of the mug. See at http://home.earthlink.net/~jawjabber for details.
If you what to buy your personal callsign mug all you will have to do is send a check or money order for the amount of the mug plus $4.00 for shipping. Remember to send your callsign so I can place it on the mug.(The mug you see on my web sit is just a sample mug. Your callsign will be placed on the mug you order.) Please USA orders only. See at http://home.earthlink.net/~jawjabber
To see a picture of the Callsign Mug and to get the order forms please click on the link below.

Au contraire! You are much safer dealing with an ebay vendor than with any private seller! The ebay vendor has his/her reputation at stake, as you have the opportunity to leave feedback on the transaction for all to see forever. The occasional newsgroup/swaplist seller has no such motivation to make you happy with your purchase. As an ebay purchaser you have the opportunity to essentially blacklist the vendor by leaving negative feedback on them.

Less than straight forward? What seller in his right mind would NOT want to get the highest return for his goods? Fair value is set by the free market. Don't think everything is high priced on ebay----there are great deals there sometimes!! My experiences there as a buyer and seller have been much better than local or newsgroup purchases have been.

However, I do agree that proper etiquette dictates that the "FA" should always be used instead of "FS" on auction link ads. Auction link ads that are not properly headered even annoy ME!

Regards,

Tim VE7SEZ

Source record: 113181

Something seems wrong here. The TL922A has 2 500Z tubes in it and should be a positive voltage. The Ameritron relay should work fine.

Look at your IC-746. There should be a +12 volts on xmit somewhere on the output for the relay. I think this is what you should use.

I have a one transistor circuit for keying TL922A, SB220 and L-4B/L-7 on my webpage. Check out:
http://www.qsl.net/k0bx

4911. TVI on Channel 5

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-22 00:00:00 UTC
From: jathatcher@hotmail.com
Message-ID: <7d4g3j$mj1$1@nnrp1.dejanews.com>
Source record: 113182

I live along the Southern end of the Salt Lake region, in Orem Utah about 70 miles from the TV transmitters. All channels have near perfect recepition except for Channel 5. Channel 5 suffers from TVI that on screen resembles CB or HAM interference. It is usually worse at night. Sometimes it is bad enough to blank out the picture. When it is this bad usually channels 2 and 4 are also affected to a lesser degree.

I have tried toroidal core snap-ons on the TV's power, a power line conditioner, and FM filter. Nothing. The antenna is mounted in the attic and is a Channel Master "fringe-area" sized VHF/UHF connected to 4 coax jacks in the house using R6 coax cable. It was professional installed. All my TV's including a presumed good quality Panasonic Superflat 27 inch display the Channel 5 TVI problem.

While the picture interference seems to suggest CB or HAM interference (based on the examples I have seen at the FCC web site), I have never heard an operator's voice. Also, on occasion at night, the Channel 5 interference will suddenly clear for about 10 seconds then return when a refrigerator or furnace fan powers on. But on most other occasions, the refrigerator or furnace fan has no effect.

This interference has me baffled. Could there be more than 1 problem?

What could this be?

Its been a long time but I seem to remember feeling lucky I sold mine for somewhere around $150-$200 in 1979. It was an OK rig which I bought for using a nice quiet autopatch in the Chicago area. But I recall being a student at the time my main motivation was it was cheap, of course 25 years later maybe its a collectors item :-)

>I'm looking at Icom, Kenwood and Yaesu radios.
>
>Any input on their willingness and ability to service and supply parts for
>older radios (80s vintage? 70's vintage?) is appreciated.

Factory service for radios over 10 years old is unusual. Often
parts are obsolete and no longer available, and the current
bench techs may not have been trained on the older equipment.
There are exceptions. Up until very recently, Drake was still
servicing radios they made in the 60s, and they aren't even
in the amateur equipment business anymore. TenTec also
makes every effort to service any radio that they ever made.
The Japanese companies don't do that, however.

Generally, if it is over 10 years old, *you* are the service
and support person for it. Now that shouldn't be a big deal,
amateurs are expected to know how to build and service
radios. The only real issue is whether you can get the parts
you may need. That's where hamfests come in. You can
generally find parts, or parts radios, for virtually any piece
of equipment ever made at one hamfest or another. So
don't be afraid of older radios. If the design is good, and
it is working when you buy it, you'll do fine. Solid state is
very reliable, usually things like switches and pots are what
may cause trouble. If you can't get the exact replacement,
you can just fit a different pot or switch. Do try to get service
manuals if you can. They can be a great help if your radio
does develop a problem.

>suggestions on what radio I should pick???? Thanks 73, Andrew

If you're a serious contester, you don't want the FT-847. It is primarily
a VHF/UHF rig that happens to do HF (I have one, and while I like it for
what it is, it isn't a contester's radio). The IC-756 is a better radio for a
contester than the FT-920 (which isn't a *bad* radio), more expensive
though. Another alternative is the IC-746. It is similar in performance
to the IC-756, and quite a bit cheaper.

If you're looking in the IC-756 price range, you really should look at the
FT-1000MP and the TenTec Omni-VI. Both are top of the line no compromise
HF radios built with the contester in mind. The TenTec is US made too, and
TenTec service and support is legendary.

>performance of the IC-706, especially with respect to QSK high speed
>CW versus the IC-735 would be appreciated.

I have both, keep the IC-735. Other than its somewhat larger size,
it is a much better all around radio. No Icom radio is good at QSK,
but the IC-706 is worse than the IC-735. I like the small size of the
IC-706, I like the detachable head for mobile mounting, and I like
that it has a real RTTY function, but it is no IC-735 in overall receiver
performance. It does crunch, the noise blanker is a noise generator,
filter blowby is a problem, etc. The thermal control system on the
IC-735 is also truly superior. You won't like the fan on the IC-706.

The IC-706 does do 2m, but it is somewhat underpowered and it
is clumsy to use with repeaters. It also lacks sensitivity, and
at the same time suffers intermod problems. A double whammy.

In summary, the IC-706 is a good radio (despite the faint praise
I gave it above, there is a lot to like about it), but the IC-735 is a
great radio. I wouldn't trade great for good. Buy it as a second
radio, but don't let go of that IC-735 unless you upgrade to a radio
that is really better, like the IC-746.

Yep, sure does. Yaesu says it may not tune properly there, but mine does.
A lot depends on how a mobile HF antenna is mounted. I have mine mounted
on a 40 foot mast with radial wires, IE I don't use it mobile. I have a Texas
Twister big screwdriver on the truck.

Just use a DC pickoff box (available from Polyphaser, or you can build
one, it isn't rocket science). That allows you to insert DC on the coax
without backfeeding it into your radio. It is just a capacitor and a choke,
capacitor in series with the coax inner, choke in series with the DC
source lead which is connected to the inner on the antenna side of
the capacitor.

It won't autotune with your IC-735, but it will work like any other manual
screwdriver antenna.

>I'm thinking "what was Yaesu thinking?". What kind of an idiot would
>mobile a new $1700 radio?

Lots of people apparently. The FT-847 is a nearly ideal radio for the
rover in VHF/UHF contests. The HF section can be used to drive
transverters too, and lets you receive time hacks from WWV. Oh,
and you could use it directly on HF I guess, though there are certainly
better HF radios on the market.

>Their ads state "designed for the FT-847, but
>there is no disclaimer that states it will not work with other radios! I
>think I smell some misleading advertising.....especially since the

>of RF, in case you're wondering.

It is marketed for the FT-847 and FT-100, both of which have the firmware
to drive it, but a screwdriver is a screwdriver, and you can use it manually
with other radios, just as you would any other screwdriver antenna.

From: munsch@ibm.net
Message-ID: <36f5e8d9@news1.us.ibm.net>
Source record: 113195

You are not going to know the answer unless you get a good spectrum analyzer and look. Ten or fifteen years ago the FCC stopped enforcing the prohibition against transmitters in the 72-76 MHz band within 90 miles of channel 4 and 5 transmitters. There are now 330 watt point to point paging distribution transmitters between 75 and 76 MHz which seriously degrade channel 5 reception even in grade A contours.

Could be third harmonic of a CB signal.

It also could be co-channel interference from either another full power station in another direction, or a LPTV station. If it clicks on and off, these are not likely. If it fades in and out, then these could be the problem. Wait until summer of 2000 when the bands start to open from E and F layer propagation up to 60 or 70 MHz, and then try to look at any low channels in the daytime.
Get help and good luck.

Hi again,
Sorry to be persistant, but.....
Has anyone had any experience with this set, I believe it`s used
widely in VK land (country of origin) by backpackers, flying doctors
and also by many expeditions to inhospitable places.
Speaking to South Midlands Communications here in the UK, they
sell most of them to the Antarctic stations, Raleigh international etc..
I would like to use this while hillwalking as every kilo counts, and is
specified as only consuming 350 milliamps on receive.
Cheers, Gary - G7TOK

I would go a step farther than that and go for the 830 if you want the extra receiver goodies. The 830 has provision for dual if filtering. Has VBT and IF shift and notch.
Also rit/xit, variable noise blanker and one of the cleanest speech processors they put out back then. It's a true rf clipper instead of audio processing. I have rebuilt a couple of 520's lately. They are a real good basic radio with excellent audio quality.
Being as I work cw quite a bit, I found an 830 to try for a while to compare against the 520 I had. I have to say, the 830 won on almost all counts I think. It's hard to beat the VBT/IF shift combo. I can dial 2400 hz down to 500 hz in ssb mode. In cw , 500-150 hz , with only a single 455 if -500hz cw filter. But last but not least, and this is the real kicker in favor of the 830, or the 530 also for that matter, the VFO 230! NO DRIFT!
It's so nice to have a tube /ss hybrid rig that is as stable as a 940 or whatever. And memories also. I can leave the rig on for weeks and doesn't move. If not for this , I probably would have sold the 830, but now, I really am liking it more and more as I use it. I sold the 520 I had as it was definatly obsolete in comparison. The 830 has a quiet, kick butt receiver for an old radio. And I thought my 520 had good audio, but almost every person I tested prefered the 830 over the 520 with the exact same mike used on both. It can hold it's own against most all new ones I compare it to. So anyway, I think the 830 was the king of the old kenwood hybrids. It was the last model also , so natural I guess. The 530 is also real good, and also will run on the vfo-230. MK

Hi folks :) I'm an electronic musician *seriously* looking for the following musical equipment, in any condition, even broken:

-OLD SYNTHESIZERS (from the 60's-80's)
-OLD KEYBOARDS (w/ knobs or sliders)
-OLD DRUM MACHINES
-OLD SEQUENCERs (w/ knobs for each step)
-OLD VOCODERs ("robot-voice" sound)
-MODULAR PATCHABLE SYNTHESIZERs
-RACK SYNTHS
-INTERESTING EFFECTS and anything related to the above.

-Moog, ARP, Korg, Roland, Sequential Circuits, Oberheim, Yamaha, EML, Electrocomp, EMS, Synthi, Putney (VCS3), RSF, Buchla, Serge, Polyfusion, Ionic, Paia, SMS, Wavemaker, E-mu, Steiner-Parker, Chroma, Aries, etc.

-Roland TB-303 Bassline
-Roland TR-909 Drum Machine
-Roland TR-808 Drum Machine
-Synton Syrinx Monosynth
-All broken ARP products
-ARP Avatar Guitar synth
-Recording studio effects processors
-Roland System-100m

http://members.aol.com/rolandman1/index2.html

Also looking for old literature on synths and electronic music techniques and equipment...

If you have any of the above OR SIMILAR for sale or know someone who might, please email me at rolandman1@aol.com and include phone number as well if you'd like.

Thanks in advance and apologies if this post annoys anyone.

I have two amplifiers (an Ameritron AL-811 -2 tubes- and Yaesu FL-7000 solid state)
Both of them have smoke damage from a house fire.
These amps were in perfect condition and on the air at the time of the fire (across the room about 15 feet).
My insurance company has written them off so I am selling them AS IS.
As far as I know, other than the fact that they stink of smoke and I've not attempted to clean the soot off of them, they should work if simply given a good cleaning.
I want $250 for the AL-811 and $750 for the FL 7000.

If interested, give me a call.

Hello,

I am currently looking for a 440 HT or Mobile. To keep
my costs down, I would like to purchase from someone
in Canada, and preferably in Ontario, or even Ottawa.

Must have original packaging, manuals, and odd & ends
and receipt if possible.

I will only purchase from a Radio Amateur.

If you have one forsale, please email me.

Hi BD,

I've used an FT-840 for about 5 months now and have really enjoyed it. I rate it an excellent, though not stellar, rig. If you're going to do CW, be sure to get the optional 500 Hz filter. Obviously, it's not a contester's rig, but for getting started it's hard to beat.

Spend some time or money on a decent antenna and you won't me disappointed.

73,

Marv, KC0EGB

4941. QUESTION: TS830S WITH AMERITRON AL811H

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-22 00:00:00 UTC
From: Steve <sbynum@earthlink.net>
Message-ID: <7d5nij$a41$1@oak.prod.itd.earthlink.net>
Source record: 113212

A few issues to bring up.....(answers preferred from users of both}
1. Does the relay in the TS 830S handle keying the Ameritron AL811H properly or is a outboard relay needed?

2. The AL811H amp comes stock wired for 110v....does it really work ok at 110v {i dont have 220v but could have it if really needed}.

3. What desk mic {with your experiences} do you recommend for the TS 830S for all around performance {Im considering the Shure 444d}. I want a desk mic that doesnt have too much bass to it but has some highs as well without it sounding too narrow.
Thanks for any input

Has anyone ever heard of the C401 by Standard? Its simuliar in design to a C508 HT. I just got a couple of them and would like to learn how to operate them as I have no manuals with them. They seem to be design for use in europe as the band width is 430mhz to 439.995mhz. They seem to have alot of parameter settings in the setup menu but I've only been able to figure out about 11 of them out of 24. Does anyone have an info and/or mods for this HT. (Like, can it be expanded to the 440-450 range?)

John

4950. Re: TVI on Channel 5

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-22 00:00:00 UTC
From: Jonesy <jonz@rmi.nospam.net>
Message-ID: <7d5tcr$6d5$1@news1.rmi.net>
Source record: 113221

jathatcher@hotmail.com wrote:
: I live along the Southern end of the Salt Lake region, in Orem Utah about 70
: miles from the TV transmitters. All channels have near perfect recepition
: except for Channel 5. Channel 5 suffers from TVI that on screen resembles CB
: or HAM interference.
<--snip-->
: While the picture interference seems to suggest CB or HAM interference (based
: on the examples I have seen at the FCC web site), I have never heard an
: operator's voice.

: Also, on occasion at night, the Channel 5 interference will
: suddenly clear for about 10 seconds then return when a refrigerator
: or furnace fan powers on.
: But on most other occasions, the refrigerator or furnace fan
: has no effect.

This is NOT Amateur Radio or cb interference -- not according to
your description.
Sure the image(s) you see on the screen may look like the reference
images you cite -- but, the operation you relate belies this cause.
No Amateur Radio operator (nor, even a cb operator) transmits
continuously for hours on end! They usually run a 50-50% duty
cycle of transmitting and then receiving -- a true conversational
mode.
Notwithstanding that, the operator has to pee once in awhile, or eat,
or bathe, spend quality time with the spousal unit, or even sleep.
You may well have interference from some nearby transmitter -- but,
I doubt if it's Amateur Radio.

Test(s):

Check with neighbors: If ALL your TV's experience the problem,
then your next door neighbor should probably have the problem, too.
Check with neighbors further and further away from your house.
This will classify it as either a localized problem, or a
wide area problem.

If the Professional Install of your TV antenna employs the use of
an amplifier between the antenna and the n-way distribution block,
try taking it out of the circuit temporarily (and unplug it.)
A defective amplifier can cause this sort of problem.

If you can see the TVI on one of your sets while using rabbit
ears, proceed that-a-way.
Elsewise, use the TV as is.
With the TV on and while someone is monitoring the TVI,

flip off and then back on, one-at-a-time, each circuit
breaker at your electrical box.
(Use an extension cord to a different circuit to (re)power the
TV when you reach the circuit *it* is on.)
If killing one of the circuits clears (or, Greatly Modifies)
the problem, then you have some HouseHold Appliance that is
causing the problem.
It could be a touch-lamp, a dimmer switch, a cordless phone,
a home security thingy, a garage door opener, a baby monitor,
a kid's toy, a (remote) doorbell, a sub-assy in your PC or LAN,
und so weiter, etc.
(The reason I said "...Greatly Modifies..." is because some
equipment is backed up by rechargeable batteries -- but, when
the AC mains are killed, the unit 'sags' when running on
battery alone and frequencies can change appreciably.)

Even worse: It could be a problem HouseHold Appliance over
in your neighbor's house.

No, this is basically an HF rig with some extra bands. You can use an idea of DUAL watch, but it simply acts like a priority channel and changes the active VFO to the alternate freq. for a moment. I actually leave my D7A HT in the truck to monitor a local repeater for when I am scanning on HF.

To summarize, if you are used to features of a dual-bander, you will not be happy with this radio as it is not a true dual-bander on VHF/UHF.

Tom, NY4I

PS Yes, I do have one installed and operating.

Hello,

I am considering the purchase of an Alinco DX-77T HF radio. I would like to correspond with any current owners of this rig.

73,

Jacob Worthington

4957. Switching P.S. Question (KWD PS-40)

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-22 00:00:00 UTC
From: nw2m@qsl.net
Message-ID: <7d46j0$f2u$1@nnrp1.dejanews.com>
Source record: 113323
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

Greetings,

I have a Kenwood PS-40 switching power supply. Every 3rd of 4th time I turn it on, it will not power on. I have traced the AC prower thru the ON/OFF switch and onto the circuit board. All is well. Switch and wiring are both good.

If it toggle the on/off switch, plug it in and out of the wall with the switch on, or let it sit for several minutes it will (finally) power on when it is in this mode. Very strange. I have also tried it with and without load on the output. Sounds like a cap is going bad in the osc area.

I can trace a linear supply, but I am not familiar with switchers.

It does not want to kick start!

73,

Al, NW2M

I have just got my hands on a ic706 mk11G. Super radio and has a datajack at the back which works the interface cable. I have not found any working control software on the net. Have tried your fantastic prog for the q7. From what you have found with the q7, it would be interesting to see what the full posibilites are for the 706.

It would be handy as a starter if at least the memories could be accessed in the same way as the q7

Also, the software available on the net and via your site will not work with the new 706 due to the UHF coverage.

Keep and the super work and
73s from Scotland

4973. FT100 Sidetone level

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-23 00:00:00 UTC
From: "Thomas M. Schaefer" <toms@altahealth.net>
Message-ID: <922225056.127.52@news.remarQ.com>
Source record: 112989

I just spoke to Yaesu...The CW sidetone level is adjustable. If you open the radio (2 screws on each side and two on the top), next to the speaker you will see VR04. This is really VR1004 on the schematic. Tech support said that was the sidetone level. I HAVE NOT tried this yet. If you bought it locally, bring it back and get your store to do it.

I mention this only as information...Do it at your own risk. Yaesu is supposed to send me an email, and I will forward it when I get it.

Tom NY4I

4974. FT100 receiver squelch issue

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-23 00:00:00 UTC
From: "Thomas M. Schaefer" <toms@altahealth.net>
Message-ID: <922225586.310.102@news.remarQ.com>
Source record: 112990

If you have an FT100 and the receiver seems to stop listening while you tune the VFO, but comes back when you stop, tweak the squelch a little bit. I had this problem and Yaesu said it was a FEATURE of the radio to remember the squelch setting on a previous band, but this has the side effect of making it seems like the receiver is not working. I expressed my feelings that this was a bug, but Tech support said this was not a bug, but a feature (Didn't know that Microsoft made the FT100, did you?).

If anyone experiences this, the solution is supposed to be adjust the squelch a bit. I suspect they tried to have the radio remember the previous squelch setting so if you go from fully-squelched on 2 meters, then unsquelched on HF, then back to 2m, the radio would stay unsquelched. If that is what they tried, it did not work.

There is a menu setting to make the squelch control act as the RF Gain. I will play with this and see if it does anything to help out this dismal situation.

"But, other than that Mrs. Lincoln...How was the play"

I just got an old Dentron GLA-1000 HF amp. Gave it the static "smoke test" (dummy connected an NO input) and all filaments lit (a good thing), fan worked ... but only read 500v when I switched to VOLTS. That seems low for a 1kw linear. I did NOT put a load on it ... what might be the problem? I don't know this (sweep tube) or have a manual.

73, Jim

Yes . No Problem. Just place it carefully behind a truck wheel and back up. Thats all theres to it. Easy Huh?? Try it. Im sure youll be pleased with the results.
You can repaint later after you give it a test on the 10 meter AMATEUR BAND where you need a license. If you had a license you would know how to do this simple feat.

Even more strange is to list your shipping price on this post but not the price of the mug, true it is in the Order Form, but not on the post, would be appreciated by interested parties and maybe more productive.

Ron,

Typically 13vdc @ 20A is the standard for a 100W HF rig
running SSB/CW. Just get a good connection off the
p/s. That is, I wouldn't use the CigLighter connection (if
it has one).
Watch the meters on the p/s if it has any. Otherwise
I would throw a voltmeter across the dc input
to the rig and watch it during keydown for a while.

I think you will be OK too.

Ramsey Kits makes one that may be a starting point for you.
Depending on your application you may need to use this
to drive a relay.

I've seen VOX circuits that use OPAmps to drive
a xistor crkt to switch control voltage of a relay

maybe a book/article on OpAmps would have something
you could homebrew.

msb

Now wait a minute, Dean. Before you go off the deep end you have to realize a few things here. Paul probably has never heard any UT0 stations on his local VHF repeater, so you have to excuse his ignorance.

With the 400,000 Indonesian, Filipino, Chinese, and South American CB'ers we have on ten meters now, one more 5 watt signal will do permanent damage to the E layer and ten meters will never work again.

And you have to realize that Paul probably was a CB'er before he got his ham license, so it's his job as a duly licensed amateur radio operator to condem anyone associated with 11 meters in order to squelch any thoughts that maybe he used to operate there....

Finally, Dean, you have to realize that Paul doesn't realize that the CB'ers all over the ten meter band are using Kenwood, Icom, and Yaesu radios and 'export models' of good buddy stuff, so few of them are converting anything to become a pain in the neck.

Or maybe Paul is just like he is because somebody backed up over him with a truck.

And to our friend, UT0IY, yes, you can convert old 11 meter radios to ten meters, but how to do it is very dependent on the type of radio. The old one I converted required crystals be changed, some of the new ones don't. Post the model of the radio you have and maybe we can help you find out how to do it....

Hi Tom,

The IF-232C is basically a level translater, RS-232 to TTL, W1GEE sells a cable/kit for $39.00, althought
I opted for an original kenwood to compliment my 940. You will need however to obtain an IF-10B, this is
a daughter board and eprom that go inside the 940. They are not easy to find. I did find one and am working on duplicating the board/eprom, but it's slow going right now because of work/life getting in the way of more
important stuff like radio. If you want me to add you to my "IF-10B" mailing list let me know.

> >identifies the station, not the operator. I have always found this to

Ah while a call sign may identify the station an Amateur Station is very personalized, its a hobby and the call sign was earned by the work of an individual, as a hobby the individual who earned the call sign is usually the one using the "station" the majority of the time (except for say a club or repeater). Of course its not really even an individual station as we take our Callsigns mobile or portable with us and even our fixed station is usually in our personal residence. So its pretty easy to see the call sign being linked with the individual, besides there might be a dozen John Smiths or Jane Thomas's but the call sign itself is unique (and as stated above usually is linked to the single individual who holds it).

Sometimes calls have sentimental value, for example I don't really think of myself as N9KKP which I got when I failed to renew my license on time during a period of inactivity. Thanks to the Vanity program for a measly $13 I will (hopefully) receive my original Callsign which I earned through a lot of hard work when I was in High School a big accomplishment for a 14 year old kid. I think that's the other reason for personalizing our Callsigns, its like a fond memory, I have thousands of conversations as Steve some good some for work, some not so good. But all the conversations I've had with my callsign since it was a hobby and for fun have been mostly pleasant (similar to my IRC nickname, it helps make the hobby relaxing leaving some of the day to day issues of ourselves a bit behind).

Regards,
Steve

5013. FS: Kenwood TH-215A 2m H/T $100

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-23 00:00:00 UTC
From: martyt@pobox.com
Message-ID: <36f811d7.101044547@news.supernews.net>
Source record: 113080
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

FOR SALE:

Kenwood TH-215A Handheld 2m Transceiver. Works great, looks very good. Has 10 memories, sub-audible tones, wideband RX, 5W high power and about 2 watts low power, power saver, scanning, DTMF pad.

Includes Kenwood SMC-30 speaker/mic, rubber duck antenna, 12v DC power cord and a copy of the owner's manual. No battery charger - but has a standard plug so most any 12v charger should work. Battery pack was rebuilt last summer and is in like-new working order.

$100 shipped to your door via UPS Ground. Payment by money order preferred; checks must clear bank before shipping.

E-mail if interested.

5014. Computer Control for 940S/AT?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-23 00:00:00 UTC
From: tom <tsokol@injersey.com>
Message-ID: <7d7598$9f3$1@nw001t.infi.net>
Source record: 113081

I have recently acquired a Kenwood 940S/AT. There is no mention about computer control options in the manual, but vintage (well, 1989!) ads in QST featuring the TS-940S mention a "IF-232C Computer Interface Level Translater" and a "IF-10B Computer Interface Module."
It appears as though the IF-232C is still available from retailers, but the latest "module" available seems to be a IF-10F (not sure if they are interchangeable.)
Do I need both the module and the "level translater" to connect this to a PC?
There is a schematic for a computer control interface on the net (using a MAX 232 chip), but I don't know if this does the same thing as the Kenwood IF-232C or the IF-10B.
Can someone guide me in the correct direction for hooking the rig up to a computer?
Thanks!
Tom, N2LDE

> Butch Magee KF5DE
> Brandon, MS

I've done a lot of usenet purchasing/selling over the years, alot has to depend on having the intuition on when to go/not go I usually will make at least 1 phone call to the prospective party, and ship COD. The phone call helps weed out a significant amount of the deadwood, there are those who can look good on email but you can tell when you get them on a more personal level that something is amiss. As always if a deal sounds too good to be true, it may very be a scam. If you still are concerned there are a some sites with for a small fee will do escrow payments, this also I beleive permits you to let the buyer pay by Credit Card. They basically take payment from the buyer notify the seller. The seller then ships and the escrow sites verifies that shipment of the product has been received. At that time they release payment to they seller.

I have more confidence in a seller that states his price. The auction sellers are essentially saying they want to get the most they can regardless of the fair value of the item. I suppose this is the capitalist way but it seems less than straight forward to me. I also suspect that you're more likely to get the shaft from an auction deal.

Larry, You are correct. This requires 24-28VDC, not 13.8VDC as I indicated
below. The 13.8V supply is model MP-1 or something like
that.

This PS runs the KWM2 and the 32S-x series transceiver/transmitter.

Hi,
Looking for the old Turner +3B microphone (of 1970's CB vintage)
or the Turner CS-1 custom special mic. This is for a nostalgia ham
station that I'm putting together. Does not have to be perfect,
just working and looking reasonable.

Check your top shelf -- probably been collecting dust since the
1970's, right?! Let me know condition and price.

thanks,
Joe K7JOE

Message-ID: <36F75573.C26C4449@ix.netcom.com>
Source record: 113091

You might want to pass on this one if it is to be your first HF rig. It is a pretty good radio with a good reputation (I have one I really like), but not having the TX stage working can either be a simple fix (like replacing the driver tube) or an expensive and difficult one if the 6JS6C finals are gone (more likely). Possible power supply and alignment problems get even scarrier. The 'green band' replacement finals are nearly impossible to find and the ones without are expensive and difficult to neutralize. There is a mod available to help the neutralization problem, though. Without schematics, the job gets tougher. Some '101B's have seen mobile service and that takes a toll on them as well.

Other radios of this vintage and price range to consider (aside from a working '101B) are: FT-101Z, FT-101ZD, FT-901DM, TS-520, TS-530, TS-820 (all using less-expensive readily available 6146B's as finals), or the solid state TS-120. Consider too, a working FT-101E which is about the same as the B. Prices for a working radio should be from about $250 to $450 depending upon condition and additions (spare finals, CW & AM filters, WARC additions, DC power inverter/supply, microphones, ops manual, service manual). As always with a used sale, it is nice to be able to trust your seller and have him offer to fix problems for you for a period or just to agree to buy it back if it is not to your liking--that is worth paying a little more for.

I'd only be tempted by the '101B that you described if the price were $100 or below or if I had great repair skills and a bit of time to work on it.

Good luck,

-- John (N0BUP)

I have been using PC Packratt for windows v2.0a since I started with log windows with great success. I like the way it integrates with Log Windows and the way you can run digital modes and DX cluster at the same time with a PK2232. But... Just for fun I tried running Packratt on my computer with the time set for 1/1/2000 and the program came up with some (bad arguments for date). Although this did not disable the program I was wondering if anyone knows who might be supporting PC Packratt and if anyone still does, if there is any plan for Y2K fixes.

Any information would be appreciated.

Hi,

I have just acquired a Bird "RF Power Analyst" Model 4391, which seems to be a hi-tech version of the famous Bird "Thruline" power meter. Does anyone have an operator's manual for this device that they could either copy, scan or loan for copying? Any info, etc., gratefully received, e-mail replies preferred. (I have checked the Bird Web site and I don't think this model is in their current catalogue, although I'll be contacting them about a manual).

Thanks,

Roger Basford

3/22/99

A few observations on e-bay:

How do we know the seller is not bidding against himself,using another name and address,to raise the price?

What reputation does any e-bay seller have to protect? If he gets caught,he just makes up another name for the next deal.

In response to the "what seller in his right mind" question,there are actually people who are not out to get more than the fair value of an item. Apparently you're not one of them.

A good receiver would be the Lowe HF150. Don't know how much it sells for
in the good old USofA, but in GM a good 2nd hand one would cost 200 to 250
pounds.
Excellent receiver, ditto for construction (diecast case) and easy to use.
It is also compact (off the top of my head it's about W*D*H = 200*100*75mm)
Alan

I thought the FT-10 was already wide band recieve--just type in the
weather frequency. The weather freq's are in the 162MHz range--just
scan in that immediate 1-2 megahertz of frequency.

I have a laptop that I am willing to sell or trade for an HF radio along the lines of the Kenwood TS450S, or other brand similar radio.
It is a Toshiba Satellite Pro 440CDX, Pentium 133MMX, 16mb ram,1.4gb harddrive,10X CD and 3.5 FD swappable, 33.6 modem, sound card, color display, Win95,95 Plus, and cordura carrying case. It is in real good condition and works great, I know of no problems with this unit either in appearence or function. Let me know what you have, or make me a cash offer. Thanks for reading.

Hi Jim,
I am curious as to how a screwdriver antenna would fail to cover the WARC bands if it cover the other bands from 40 through 10? Does not sound possible for this type of antenna. Does it uses a different tuning method than other screwdriver antennas? According to the specs the antenna should cover 40 through 70 cm.

I know that most HT mikes will not work with most CBs because they use different types of microphones (I don't remember the names.) I need to use an HT mike on both my HT and my CB (using a switch to switch back and forth.) I was reading either QST or 73 years ago and saw a schematic for a converter which one could use between the HT mike and the CB. I can't find the article. Does anyone know where I can find this article or a schematic for this device.

Thanks and 73,

5063. Universal Programmer

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-23 00:00:00 UTC
From: Ingra-Beton@t-online.de
Message-ID: <36F6F8AB.C8C8175F@t-online.de>
Source record: 113172

Hi,

I have just released a nice little Software for:
(download from my page)

Read/write/edit any SmartCard like
- async.T=0 (GSM SmartCards)
- sync. Telecards (Phonecards)
- sync. I2C (Towitoko Cards, 2Kbit-64Kbit, ...)
- sync. 2-wire (German Social insurance, ...)
- sync. 3-wire (German Social insurance, Towitoko Card with Pin, ...)
- sync. microwire

Read/write ANY Serial EEPROM
- I2C (24C00,24C01,24C02,24C04,24C08,24C16,24C32,24C64,24C128,...)
- Microwire (93C46,93C56,93C66,93C76,93C86, ... 8 and 16 bit org.)
- SPI (X25C02,X25020,X25040,X25057,X25138,X25170,X25330,X25650,...)

It is developed with and for the makinterface,
but some parts of it might work with some
other interfaces like the DumbMouse, SerProg,
Phoenix, ...

What this has to do with Radio Amateur :)))))

These nice little EEproms are in almost every
device today. In your GSM phone (containing
the byte for activating the engeneering menu),
in your DVD player (containing the country
code), ... and of course in EVERY Radio Scanner
and Radio Transciever.

I have read (and written to) without problems
the EEproms on my TM-V7 and IC-Q7.

And I am VERY disapointed in ICOM.

The EEprom is used only 25%, the rest is EMPTY.

I don't understand the world any more, instead of
pushing the technologie to the edge, ICOM is cutting
the Frequency range, the number of memorys, ...
and the Hardware is all there.

What a shame, in the intention to sell the IC-R2
they have crippled the IC-Q7.

Well now I am playing a little with the CPU, the
M38267M8L-209GP, I have found the assembly language
manual, ... and with a little luck we will be able
to write our own firmware soon.

And I bet my Firmware will be better then ICOM's, :)
it will have 800 memorys, 80 scan edges and will
cover 0.5-1.6GHz :), and I will help ICOM a little
bit, I will make the IC-Q7 the best mini HT :)))))

Please don't ask my about the possibilitys the
EEprom reprogramming will offer for the IC-Q7,
I have to explore a little bit (In my free time)

The Software was tested with every SmartCard and
EEprom I could find, play a little with the
Software and report any bugs, sugestion, ...

Hello,

I have an ICOM AT-180 tuner for sale. I purchased it to utilize my ICOM 706MKII while operating in doors with a dipole antenna. With in the last 18 months I am now the proud father of two daughters. Hamming in the house just does'nt happen all that often these days. My 706MKII now has a pretty permanent place in my pickup truck and I use it mobile during my commutes to and from work.

Will sell for $340.00 and I will ship UPS COD...

I have the tuner in its original box with connection cable ready to ship...

Thanks and 73

>UT0IY

Hello OM,
I've successfully converted two synthesized CBs to 28 MHz for CW operation. The first radio was converted by removing the 10.240 MHz PLL reference crystal and replacing it with 10.635 MHz crystal I chose that frequency for no other reason than it was the first one to fall out of the junkbox! It was a good choice, for now Channel 1 is at 28.005 MHz.

The second CB was converted only after I had studied how PLL circuits work so as to learn how to re-wire the 8-bit binary-coded decimal (BCD) programming scheme.

I highly recommend the first method!

Keep in mind that if you change the crystal to get the radio up to 29 MHz, the crystal oscillator will need to be aligned, as will the RF stages.

Hope this helps!
73 from Hawaii, Jeff WH6U

Hey Jim, I tried to trade a Laptop Computer for an Amateur Radio a few years ago and had no luck. The reason is simple. The used radio I wanted to trade for still is worth about what it was worth then. The computer is now worthless. Who wants a 486/66 black and white screen with 4 meg memory and a whopping 175 Meg hard drive. The laptop cost plenty when it was new but boy.... those computers loose value faster than yesterdays donuts. Amateur radios on the other hand seem to hold their value a lot longer.

Mars/Cap mod for Kenwood TM-V7A

Remove the top and bottom covers and the detachable face holder.
Look at the pc board that is vertical behind the front of the radio.
There will be
2 small chip resistors on the left side of the board. Carefully remove
the one
with the number 0 . It will be the one closest to the left near the
grounding
spring. You will probably have to scrape it off with a pair of needle
nose
pliers.

After you remove it the TX should be VHF TX 136.995 - 173.995. RX should
be 118-174. UHF TX should be 410-469.995 RX should be 300-470.

Finding ham equipment on eBay is a lot easier than getting it for a reasonable price.
If I was a seller that is the best place to get the most money out of my equipment.
If I was a buyer that would be the last place I would expect to find a good deal.
However there are rare ocations that something will sell for less that it is worth.
The worst part of it all is that all the serious bidding takes place in the last 30 seconds of the auction.
I would never bid on anything until literately the very last minute on any auction.

Could it be that Denrton rated the amplifier as 1KW on SSB?
That would relate to about 500 watts CW.
Even still the voltage seems low.
Did you key the Amplifier with no input to see if the voltage increased?
Did you see any AC ripple on the HV?
I would first check all the diodes in the HV power supply to see if any had opened or become leaky.
Next step would be to check all the filter capacitors.
I hope this puts you on the right track to solving your problem.

Hi,
I've got a problem with receiving anything on 50 Mhz band.
I tried switching between HF and 6m port but it simply changes nothing.
Also, it seems that there is no problem with transmiting (probably)
- separate power meter proves that.
After turning antenna amplifier I can hardly hear some stations,
but still it is almost "mission imposible" to understand anything.

What could it be ?

Tnx & 73

Paul,

UT0IY may well be a valid call sign. Looking at the QRZ New DX page at http://www.qrz.com/wrad/directory.cgi?new_dx I find a couple other UT prefixes listed. I also find in the 5th edition of the ARRL Operating Manual (ch. 17, pg. 90) that the prefix UT indicates someplace in the Ukraine, specifically Kiev.

I'm not up on searching for non-US call signs online. I've no way of confirming that UT0IY is valid or not - but it sure looks like it may be, but of what class/type - I don't know.

Now if this poster had indicated he was some yak-jawed 'good buddy' I'd have to totally agree with your suggestion. In this case though, methinks you've keyed up before listening.

Message-ID: <36F95F02.63C3@flash.net>
Source record: 112950

Drake experts:
I have an opportunity to obtain a TR7 (not an "A") in good shape, with power supply and book(s). It does not have the CW filter or noise blanker. Price unknown at this point.
Questions:
1) What does it take to make this thing into an "A"? I am guessing at: noise blanker, aux 7 option and CW filter.
2) About how much do these pieces go for these days?
3) Can it be put on the WARC bands without a redesign?
4) The owner seemed interested in trading for my mint Kenwood TS820S with CW filter. Is this a fair trade? I'm guessing the 820 is worth $350.
Thanks
Bob

But also note that if you change the reference crystal, the spacing will
be different. Also, the CB sets I've seen use the 10.240MHz crystal to
convert the 10.7MHz first IF to the 455KHz second IF. If you move the
reference frequency, depending on the rig you may move the signal out of
the first IF passband.

The CB sets that I've seen block diagrams of use a mixer between the VCO
and the programmable divider. It's there to simplify the calculations
and/or to get the VCo down to a frequency that the programmable
divider can handle.

They use a harmonic of the reference frequency as the second signal to the
mixer. The real change of the CB set's frequency comes from that harmonic,
not the actual reference frequency. The reference frequency is divided
down to 5KHz or so, and to make much difference at that point would
require a very large jump to another frequency for the crystal. However,

the change at the crystal frequency, especially when multiplied something like three times means the VCO has to move up in frequency by that much in order for the signal at the output of the mixer (ie the input to the programmable divider) to be the same as when the reference crystal was unchanged.

In other words, if you move the reference frequency up almost 400KHz, the injection to the mixer is over 1MHz higher so the VCO moves up that much.

The trick in the old magazine articles was to uncover where the reference frequency is multiplied and fed into the mixer between the VCO and the programmable divider, and cut the signal path. Feed a new oscillator into that point.

This moves the VCO (and the rest of the CB set) higher without messing with the channel spacing. It also will not mess with the second conversion osciilator.

Don't know how to activate your filter?

Don't know how to skip over a post when the subject is CLEARLY
indicated?

I suspect your REAL problem is that you haven't the WILLPOWER to avoid
the very subject you CLAIM annoys you,

AND that you suffer the inner "need" to play "newsgroup censor"...

Is this a moderated group? If it IS, the moderator is capable of
controlling posts - if not, then let your conscience - and your
keyboard - be your guide.

As for ME, all private Email from those complaining about my posts
here on this and similar subjects, will be "deleted unopened"...

Make sure you have a good resonant antenna...I have found the 6 meter band very non forgiving of un-resonant antennas...

A 10 meter antenna will not help you, nor will a 2 meter antenna...It must be specifally cut for the 6 meter band!

I had a simular problem until I put up a 6 meter verticle!

5107. Kenwood TS-940S/AT

I need some help from my fellow Amateur operators. I just bought a Kenwood TS-940S/AT, used, and the salesman couldn't tell me much about it. Kenwood has nothing about it on their website either. What I wan t to know is:

1.) Can it be interfaced to a PC?
2.) Where do I get the cable if so, or how do I make one? (I'm sure it would use RS-232.)
3.) Where can I get the software to control it, if it does interface to a PC?

Any other information anyone has to share with me would be welcome as well. I can not find any modifications for it, except one that repair eratic displays, so any additional mods would be appreciated. It did come with the manual, but I haven't picked up the radio yet, so I haven't had time to read the manual, so forgive me if the information in contained therein.

Thanks in advance,

Fred
KC8LNM

I made a comment, I didn't ask for anyone's opinion, including yours Gary. That's what's wrong with this world today, too many people sticking their nose into other people's business. And no, I don't know how to activate my filter, wasn't aware I even had one. But seeing as how you know it all oh wise one, how about "elmering" me on this subject. And then I could filter out your posts. And yes, I can skip over threads such as these, and I don't read them. But I have one question, what in the hell do boatanchors have to do with shooting people? You don't know anything about my Real problem, or my WILLPOWER, or my inner "need". And you really should have sent this post to me PRIVATELY, but seeing as you apparently have the "need " to waste NG space, it's fine by me. Go to Dejanews and see if there are any posts from me attempting to be a "newsgroup censor".
Thanks for setting me straight, Keeps Jacking 6 Queers.

<Remainder of senile rant deleted...>

Why OM, I'm TRULY chagrined at your distress, and your need to even go
so far as making *multiple* posts to as broadly as possible
distribute your anguish... I'm SO distressed, I may even burn my
license, toss out my PC and chop down my tower... NO!, I'll do THIS
instead (watch carefully now...) and just filter YOU!

Here's how it's done :

<FLUSH!>

THere, now, as far as MY PC is concerned, YOU don't exist anymore...
But I'm not REALLY sure you ever did anyway... BUT, *do* rant on
endlessly for the benefit of the others - I'm SURE they are quite
amused...

Gary - KJ6Q

Harry,
I own a 706MKII and am very happy with it. Have had it about 18 months and no complaints. As far as the FT-100 is concerned, remember, it's a new radio. If it starts out like the FT-920 it could be a real nightmare for somebody. The 706MKII is a second generation radio. All the "bugs" have been virtually eliminated.

5117. Daiwa PS300 Power Supply

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-24 00:00:00 UTC
From: rpemers@aol.com.alt.edu
Message-ID: <19990323201520.01730.00000215@ng-fy1.aol.com>
Source record: 113026

Does anyone know anything about the Daiwa PS300 power supply as far as it being suitable to run an HF rig from??? It sounds ok to me in that it produces variable V of 9-15 VDC and 30amp current. I would appreciate input from anyone familiar with this supply and use for an HF rig. Please email.

Thanks

Ron

I seen that the new g707a does get father on receive than the V7a.
Kenwood has the mod for the G707a at their web site and I took a look
at them. The boards where the mods are performed are as far as I can
tell very similar. If it weren't such a pain in the ass for me to get
my radio uninstalled from my car, i'd perform the 707 mod on my V7a
just to see what happens.

No I would have to say that we are all lucky ......same thing up here in Canada the display tends to be faded for the first few minutes of operation aswell. I have one other problem though and that is with that bloody modular mic plug it tends not to be too snug and very often has to be played with so that all the mic functions work has anyone out there had this problem? I love the radio but have to admit that the cheap connector is a real let down.....even the connector on the RadioShack HTX 242 is better made and this is an understatement!!!!!!!!

Paul, such a rude response!

But the apology speaks well of your character--most would not have had the courage to type it. Let's see if we can help this guy (or his radio sport club) out in simple English:

Okay Vostok-Radio, the conversion involves changing the reference crystal in the phase-lock-loop (PLL) circuit to the part you are interested in moving to in 10M. In North America, most AM activity is 29.000 to 29.100 MHz, sideband is from 28.300 on up to 28.700 or so. You can also frequency shift the carrier and operate in the FM portion of 10M from 29.400 to 29.700, but this is a slightly harder modification unless you have one of those FM CB radios that are built for overseas markets. A company named Melco used to offer a kit to make an FM conversion of an AM CB radio that was pretty easy to do. After the PLL's xtal is changed the reference voltage must be adjusted. Harder to figure out is the band-pass filter that comes after these oscillators. The new frequency will be attenuated if this is not changed. Usually it involves just changing a simple capacitor or inductor or two.

The hard part to all of this is understanding the theory behind PLL's and in finding a circuit diagram (schematic) since they are not usually published by the manufacturers and there are so many different models that have been sold. There is a CB web page that sells service manuals for CB repairmen that may help. Try

http://www.cbcintl.com

or just keep asking on these newsgroups if you have more specifics of the circuit you are working on. In the 1970's an American magazine called '73' published many articles on CB conversions. I'm afraid that I am not going to be much help. It has been 15 years since I did my last conversion and I cannot even find my notes.

If you are going to operate illegally, be sure to work from 27.5 to 28.3 MHz, always overmodulate, add echo effects if you can, and try to speak a very fast Spanish or Portuguese so that you blend in with the other operators I usually hear there. Just kidding!

Good luck,

-- John (N0BUP)

5142. ????? SGC 237 "Mini" Coupler ?????

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-24 00:00:00 UTC
From: jhulet@aol.com
Message-ID: <19990324050103.01055.00000979@ng-fs1.aol.com>
Source record: 113051

Hey all,

I see on SGC home page they are coming out with a "mini" SGC 237 Coupler. It appears face value to be a SGC 231 but smaller in size. The new 237 tunes from 3.5 - 60 Mhz and is 5in X 5in X 1.5in ! SGC says that they will sell for $295.00! I wonder what that differences are being the SGC 231 sell new for $500.00?

I had the same problem with the mic connector. The good news is that they are really easy to fix (although a little pricey to buy the tool!). Radio Shack sells a tool for crimping on the 8 conductor telephone plugs and of course the plugs too...The cable jacket of my mic cord had come loose from the tab that acts as a strain relief for the cable, in turn loosening the finger connections that cut thru the wires in the cable, causing my transmit audio to be intermittent. Once I replaced the connector with a fresh one the problem was solved. Now all I gotta do is figure out what esle to do with this tool???

Good grief Paul,
One must assume that there is some history of conflict between the two of
you, for you to start ranting away like this.
What an interesting way you have of conveying the spirit of Amateur Radio.
(sarcasm was never my strong point)

I'm curious to as which CB's would make the best subjects for
conversion. I know that it would be better to get one w/SSB (who does
work w/AM?), but I'm more curious about what models work best. After,
why pay $100-200 for a real 10m radio when, if I spend $20 bucks for an
old cb and do $10 worth of mods, I can have something that does the
trick?

Hey, wait a minute! I have held a amateur license for 18+ years and I don't know how to convert a CB to 10M. Actually I have just started using 10M mobile and think it is great fun. I want to put an inexpensive radio in my Jeep and I would appreciate learning the answer to this question.

BTW: He did sign his message with his call, UT0IY.

Good Luck with the test.
I have had both radios and liked both. the 51R has a better speaker but
the w32a has 900meg recieve. The 51R is about $ 100.00 more than the
w32a... They both are able to be programed with computer...
Either one would be a good choice... but if you like the 800-900meg
recieve go with the cheaper w32a.
Good luck.

I am selling my AOR 7030 receiver, in like new condition, with remote control and manual. It is about a 9.5 out of 10.

Best offer over $650 gets it. Buyer to prepay with money order and will also pay for shipping and insurance of his choice.

The right to have a gun can be very practical here in the wild west. After the recent infamous O.J. trial, when the L.A. riots started, the cops just backed out and abandoned the citizens. Those with guns got some respect and saved their businesses. Those without were burned out...

Hi There.

I have a friend who is an amateur who lives close to me and he uses a
Kenwood TS570D hf tranciever.

When he switches the DSP function on there is an increase in
noise,similar to a RX which is suffering from crossmod.ie a type of
hetrodyning, whistling sound.

So he has asked to to post this on the news group to see if anyone else
is suffering from the same problem.

He bought the rig second hand so he thinks there may be a fault.

Cheers.............73's De Keith G4MIU

I am considering the purchase of a used Tokyo Hy-Power
HX-240 is VHF-to-HF Transverter.

I would appreciate any feedback as to the performance of
this device, and any potential "gotcha's" such as difficult-to-replace
parts, chronic failure parts, high noise level on RX, difficult to
interface with an amp, etc.

Would also appreciate any positive reviews that would encourage
to make the purchase, as well as the current used market value.

Thanks! & 73,
~~~

ThomasS <stop@spam.com> wrote:
: Make sure you have a good resonant antenna...I have found the 6 meter
: band very non forgiving of un-resonant antennas...
: A 10 meter antenna will not help you, nor will a 2 meter antenna...It
: must be specifally cut for the 6 meter band!
: I had a simular problem until I put up a 6 meter verticle!

hrumpf! Horse hockey. *IF* the band is open, any piece of
wire up in the open will pick up signals.
I have a scanner on 50.125 in the kitchen with a 20" whip --
when the band is open it picks up signals (and alerts me to run
downstairs to the shack.)

WHEN THE BAND IS OPEN <-- the defining condition. All-in-all,
six meters has *not* been open lately with wide area Es
propagation. There was damn little of it this Winter, as well.
There's been some TEP -- but mostly out of the southern band
of states. And, there's been a little F2 recently -- but the
occurrence and end-points of that phenomenonin the states has
been VERY SPOTTY.

WHEN THE BAND IS OPEN I work folks who are using a whole
'spectrum' of "improper" antennas. 80m dipoles. 40m inverted
Vees (which turn out to be three 1/2 wave lengths.) 20-15-10m
tribanders. HF verticals, as well as simple 6m verticals.
Lotsa times they are running QRP levels.

When the band ain't open you'll think your coax is cut.
If your rig can tune down below 50mcs, try checking to see
if you can receive the baby monitors and cordless phones
down at 48/49mcs.

Now, for transmitting -- yes, it's A Very Good Idea to be
using an antenna that makes your transmitter 'happy' -- i.e. low swr.

From: martyt@pobox.com
Message-ID: <7ddvgtsjm1@nnrp1.dejanews.com>
Source record: 112831
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Can someone with a tube reference book tell me what the driving impedance is for a 572B tube (or tell me where I can find that info on the 'net)?

I'd like to try adjusting the input networks on my SB-200, and can do so with the MFJ-259 antenna analyzer but must have a couple of resistors that are the same value as the driving impedance of the tubes (572Bs).

Any help would be appreciated.

Hello all,
I'm wondering if anyone out there has a schematic to this bugger. I'm interested in seeing if there is some work that I can do to this radio, especially to see if I can improve the reception next to computers--this radio is known to be very sensitive around computers. Mostly, I think I just need to somehow increase the squelch capabilities. Anyhow, is there some place that has the schmatic for a low cost or preferably free? Thanks.

5185. HOW TO FILTER OUT POSTS YOU DON'T LIKE

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-25 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <36FA8B8E.DB7C4642@ix.netcom.com>
Source record: 112836
Cross-posted to:
rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.audio.tubes

(This is for Netscape 4.5 and later only--
Other news readers will work in a similar fashion to this.
I don't know Internet Exploder and
hope you MS fans will provide the much-needed primer.)

Although I clearly didn't want to start a thread, I'm responsible
for a big, off topic one. This is my attempt to help
people who either cannot or will not simply ignore
posts they say they don't like, be they off topic or auction.

This primer will show you how to "filter" messages so that
you never see them and are therefore not tempted to "click"
on them. I do this to filter out posts about YaeComWoodies,
about which I have not the slightest interest.

1. Open your news reader. Select the newsgroup you want to filter.

2. On the upper tool bar, click on "Edit."
Select "Message Filters..." from the pull-down menu.

3. Click the "New" button. This will open a window called
"Filter Rules." Give your new filter a name.

4. Examine the boxes. You have many options to delete, mark
or otherwise automatically handle message from selected
persons or about certain subjects. For example,
you can tell your new filter to delete any messages
from "CBSambo" or "the cuban." You can also send
all auction messages to a special folder by filtering
for "FA:" or "ebay."

5. When finished building your filter, click "OK."
Restart your internet software and your new filters should
be ready to remove your temptations.

You can create multiple filters for each newsgroup if you wish.

I hope this is of some help and invite others to write short
primers on how to do this for other news readers.

Kind Regards,
David Stinson

Source record: 112839

Open up receive on the 10R:
Press down and hold the top knob and lamp button while holding the power button for .5 sec to turn the rig on. This should do it.

I picked up a used 10R recently for my son. This rig has the SMA conector, but the opposite gender from 50R. You can use one of the great new antennas such as the Premier 98 if you get a small SMA barrel connector. Also, you may want to get a new, shorter, orange on-button so that the rig is not accidently turned on as easily.
All of the other accessories for the 50R can be used on the 10R.

Steve

5189. Re: Yaesu FT-10 / FT-50 accy info needed

Newsgroup: rec.radio.amateur.equipment

Message-ID: <7de51d$8deq$1@newssvr03-int.news.prodigy.com>
Source record: 112840

I have both rigs. They share all batteries and accesories except the antenna because they have opposite gender SMA mounts. The simple solution to use the antennas made for the 50R on the 10R is to get a amall SMA barrel connector. These are about 1/2 inch, double female. I got a couple of these at a hamfest for about $2 each.
I use the PRemier RD-98, which is one of those long, very thin and flexible antennas. It has a very small base section, so the barrel puts the rigid section of the antenna only about 1.5 inches above the rig.

A TR-7 with all the components that comprise a TR-7A, is not a TR-7A.
You will be money ahaead to buy a real TR-7A...if you hurry up.
Drake is the next upcoming supply and demand market to be exploited.
Any vintage TR-7 with a little work and patience can rival todays radio,
less the gadgets.

Nice, Paul. Learn how to recognize international callsigns, buddy, if you
had a license you would know how to do this simple feat. Oh wait, you
seem to have a license already, how did you miss the part about callsigns?

You don't even need a license to learn how to be courteous, but that
seems to be passe in amateur radio today.

Jim -

Have you checked the B+ with another voltmeter. It may just be that the meter resistor has gone way up in value.

What kind of final tubes does the amp have? If they are sweep tubes, 500v sounds about right and that "1 Kw" rating probably means PEP.

73, CJ K0CJ

Hi All

Thanks for reading this.

Does anyone out there have the details for re-programming these rigs onto the 70cms band?

Any help would be appreciated

Cheers

My 13 year old son (Timothy) owns a Kenwood TR-2500 handheld 2 meter transceiver. He is looking for accessories to go along with it. He wants:

=> speaker-mic (SMC-25 or equiv)
=> drop in desk charger (ST-2 or equiv)
=> battery back(s) good or bad (we have new guts, we need the case)
=> Mobile stand (MS-1 or equiv)

If you have any or all of these items, please let us know.

5209. Needed S-38EB Schematic or Info

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-25 00:00:00 UTC
From: markd@silogic.com
Message-ID: <F9665q.6Jp@silogic.com>
Source record: 112860
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I have a Hallicrafters S-38 EB (the AC/DC model).

It appears the previous owner thought that the radio would work better if he/she applied AC to the headphone jack on the rear of the unit.

It does not appear to have caused the radio any major harm but there is (was) a resistor(?) across the headphone jack which is now mostly vaporized.

I'm looking for a schematic or source for info on what this resistor was and also how the headphone jack is wired in so that I can check if anything else was damaged.

If I can buy a manual, get a copy of the schematic or other option, it would help me get this radio fixed up.

Thanks, Mark K3FWT

5210. RE : Chuck Lorentson TR-9130...

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-25 00:00:00 UTC
From: Jordan Arndt <jordana@nucleus.com>
Message-ID: <36FAE0D0.6D4A@nucleus.com>
Source record: 112861

In the interest of all... Mr Lorentson kc5cqa <kc5cqa@devtex.net>, purchased a WORKING Kenwood TR-9130 from myself last spring on E-Bay.

The unit had been used on a daily basis for several years, and had performed quite well. Upon receiving the unit Mr. Lorentson claimed that when he plugged it in, the display and memories would not hold. I then explained to him that the Back-up Ni-Cad battery would need to be fully charged before this stopped unless he removed it all together and reset the memories etc when he powered the rig up, or that he leave the 12VDC Supply on all the time.

I did not hear from him agaim for about 5 months, when he informed me that he had not done anything with the rig and was very upset about having spent money on the unit. I poffered to have him return the rig for inspection and that I would repair any problems that were found, unless they were due to someone elses work. He refused to return it, and demanded that I refund his money and then he would return the rig. This I refused , as the unit was in excellent operational condition when it left here. It was not in 9+ condition cosmetically, and this was clearly stated in the E-Bay ad. I explained to him that even Kenwood or ICOM or any other manufacturer would only offer a repair after the lentgh of time that had expired. He still refused to return it. I did not hear anything from him for many months again , until now. He claims that he took the rig to a Dealer and was told the rig had suffered severe damage, and would be between 100 and 200.00 to repair, I AGAIN asked him to return it so that I could look at it. He again refused , demanding that I refund his money, a year after he purchased the rig. After suffering several insulting and threatening e-mails from him, I am letting you ALL know the circumstances about the transaction, at least from my side. He has told me that he will be e-mailing people and informing them of my ripping him off, but there are always 2 sides to every story. I am also posting this to other groups. I am sorry to have taken up this BW, but I feel that you all have the right to now. I have also retracted my offer to him of having him return the unit, as I feel that making the offer 3 or 4 times and being refused , even a year later is sufficient... WHAT do YOU think??? Please let me know... 73 de Jordan...

When I went into RS the other day carrying my 202, the guy said that
they no longer carried the 202. They might already be done selling the
202, or at least my area/state is out of 'em.

I have the following for sale or trade:

ITEMS
* Kenwood TH-79A Dual Band HT
* PB-32 6v 600mAh NiCd Battery
* PB-34 9.6V 900mAh NiMh Battery (for 5W output)
* Cigarette Lighter Adapter Pack
* BT-9 Alkaline Cell Pack
* BC-17 Charger
* Soft Case
* Nylon Cord Wrist Strap
* Manual
* Original Box

FEATURES
* Power-on call sign display
* 82 non-volatile memory channels with alphanumeric ID
* Dot-Matrix LCD and menu system
* Encoder/Decoder built-in
* Simultaneous receive on both bands using VHF/UHF,VHF/VHF or UHF/UHF
configuration
* 5 watts power with PB-34, 3 watts with B-32

$275.00 or
I would consider trading for 2 meter Multimode rig.

Idiot, you're doing it again. Not content to have cross-posted a message that had nothing to do specifically with amateur radio in the first place, and seen it turn ugly because it had nothing to do with amateur radio, you are now cross-posting a second time because you didn't like people criticizing you for doing it in the first place.

I have a choice whether I want to read political diatribe. I can very easily find plenty of newsgroups set up for that. I choose not to. I expect to not find them in the amateur radio newsgroups, especially when the threads ignore the fact that not everyone here is American.

I shouldn't have to filter to keep your junk from my view, because I've made the decision to not read it by not reading the newsgroups where it belongs.

Why don't you just stick to rec.radio.swap and sell your junk there, instead of turning newsgroups intended for discussion of specific amateur radio related topics into your personal advertising space. Since you have no consideration for that in the first place, I'm not surprised that you'd think nothing of posting your off-topic political junk here.

Hello Kansas City Tracker User or enthusiast.

I'm collect the names of all the available programs that being written, or suppot the kansas city tracker.

All these information wil be placed in a Database and wil be available to all of you.

On my homepage http://www.ping.be/~p4u11324/ you wil find a list of all available software.
If you know a program that not being in the list, PLEASE fill in the Question form:

If you click here, you go wright to the question form
http://www.ping.be/~p4u11324/KCT_Ques.html

click below for the software list !

Thanks to all of you !

5226. Amplifier Parts

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-25 00:00:00 UTC
From: kb5mer@aol.com
Message-ID: <19990324194600.26206.00000960@ng63.aol.com>
Source record: 112877

List #1= 3CX3000A7 tube,
Socket, Filament transformer 7.5 volts @ 51 Amps
Plate Transformer 2.7 Amps @ 5000 volts
HV Caps, Blower, Meters, Tank Coils
Cabinet to build a large amplifier.
I will sale all parts for $2,000.00 plus shipping.

5227. FS: Kenwood TH78A Accesories...

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-25 00:00:00 UTC
From: azmatik@bigfoot.com
Message-ID: <7dc74h$bj4$1@nnrp1.dejanews.com>
Source record: 112878

Believe it or not (I am not making this up)...
My wife smashed up my Kenwood TH-78 HT, so now I have a bunch of useless accesories.

FOR SALE - CHEAP:
Kenwood TH78-a Accesories -

Kenwood Alkaline battery holder pack.
Kenwood Cigarette lighter power cable.
Original Kenwood DC power Cable for Hardwiring to +12vdc.
Kenwood mini HT - Speaker mic (the small little black one).
Original Stock Antenna.
Orginal Kenwood 'leatherish' grey case.
Some other stuff too...

Sell all of it for $25 + $5 shipping.
You can't even buy one item on that list for that price.

Email me at jgom@bigfoot.com

I am located in the Bay Area California - locals welcome to pick up in person.

Hi Jr,

Lack of education is hard to cope with. However, as long as you do not realize that the first military bombing of an open - read: undefended - city occured in the Netherlands, May 1940: the city of Rotterdam, the discussion ends. That sort of warfare will not be opposed by hunting guns. I might mention the Grebbeberg as well, look it up. Or ask me for details.

Sorry, group, I've laid low for days, waiting for the sentiments to blow over. But frankly, I've had it with the half-educated nonsense here.

Hi, D.S.,

1) The Low Countries, as you put it, are a rather strange combination of both the Netherlands and Belgium. Two different states. that fared differently in the second world war. We share a language - Belgium has also French and German. Nothing more.

2) 'Scuse me?

> Right on!.....and look what happened to the Low Countries in '38 thru '41.

Both Belgium and the Netherlands were invaded in 1940. The Germans were expelled from both countries in 1944 and 1945.

> Some people never learn!!!

How very true...

Sorry group, but I've taken all the abuse I could. Laid low for days, but some people just have to voice unfound opinions.

Kind regards, Wammes Witkop

Dear Gerald,

Do I understand correctly, that freedom means no comment at all could be allowed? Free speach only to those of American Blood? Otherwise, you wont't buy Tulips anymore? I don't give a hoot wether you buy tulips, honestly. But I do know, I'd like to present you with some. Only where... Oh - here's the clue: butt. Bend over. They'll stay fresh longer...

By the way, it seems you did forget quite some other nations involved in WWII. English, French, Greeks, Polish, Soviets, even Dutch. To name some. Sorry, Australians and all the others...

And sorry, group. I've taken all the abuse I will, publically and privatly. I waited for this to blow over, but stuff turns up here and in my mailbox that I will not stand for. Anti-military does not mean I will accept endless abuse!

Kind regards and excuses to all others,

Wammes Witkop

5237. SB-200 Problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-25 00:00:00 UTC
From: martyt@pobox.com
Message-ID: <36f9ab5e.271337915@news.supernews.net>
Source record: 112888
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

Help!!

I've got an SB-200 and am unable to get it to load up on 10m. It used to work on 10m, giving me 500w out or so. But something apparently has changed in the last few months, and I'm having a heck of a time figuring out what is wrong. Let me say upfront that I don't know much at all about tube amps, but I can read a schematic and have a good general idea of how it all works...

The problem is that I see an SWR of > 3:1 on 10m at the exciter, and I can't get even 100w output from the amp with 50 to 100w input. The internal tuner in the exciter can't get a better impedandce match at all. I've tried different lengths of coax, etc to no avail. It appears that the SWR is fluctuating very rapidly - the SWR meter in the exciter (FT-920) is an LCD bargraph, and I can see it going back and forth between say 2:1 and 5:1 or so, very very rapidly.

When the SWR at the tuner is lowest, I see a plate current of about 100 ma and a grid current of 10ma or less. But less than 100w out for 50 watts in, and the tube light up bright red in a heartbeat.

I've just installed a brand new matched pair of Svetlana 572Bs, and can load 700+ watts out on most of the other bands; the old tubes still loaded up to around 500w on all bands but 10m. So I'm fairly confident that most of the tuner works fine.

I've replaced the 10m input coil and the 68pf capacitor on the 10m input network, to no avail.

I've also tried disconnecting the capacitor on the input network - that gives a much better match at the exciter, but I reach a point as I increase input power where the SWR suddenly skyrockets, the exciter cuts back it's output power to protect itself, the SWR comes back to normal and the cycle starts over again.

Beyond that, I have no idea where to look to find the problem. It seems obvious that there's one or more components somewhere that are affected by 10m operation, but I am stumped.

Any suggestions would be greatly appreciated. Please reply here and via direct e-mail if you would as I can't get to the newsgroups as often as I need to.

73 & thanks in advance.

5242. Problem with Alinco DX70

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-25 00:00:00 UTC
From: Anselmo Stiffan <anselmos@worldcom.ch>
Message-ID: <36F9DBFC.45F894C@worldcom.ch>
Source record: 112893

My Alinco DX70 is generating spurious frequencies when in full power position and
on 18 MHz band and above. This seems to be caused by the low gain of the power
amplifier which creates a "varicap" effect.
The consequencies are that on 18MHz and above there are SWR at full power while they
do not happen at low power. Additionally its power output is self limited to about 30Watts.

Did somebody else experienced the same problem?
Did someone solve it and how?

Thanks in advance,
73 HB9ICK Anselmo

5243. Yaesu FT-50R Modification

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-25 00:00:00 UTC
From: Major Gurung <Gurung@post1.com>
Message-ID: <7dcng8$q2v$1@newton.pacific.net.sg>
Source record: 112894
Cross-posted to: rec.radio.amateur.equipment,tw.bbs.rec.radio.amateur,uk.radio.amateur

I need some help on modifying FT50R to operate within a RESTRICTED range. There's a lot of info in making it real wide range, but I cant find any info on modifying it to operate within legal limits for Asia. The Yaesu Tech Support (surprisingly!!) says they dont have any such information.

For Asian operation, the 2m band is 144-146 MHz. How can this be done... ?

thanks
Nitin

5247. For sale : Transmitting tubes/roller inductors

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-25 00:00:00 UTC
From: dslosty@pipeline.com
Message-ID: <36f9ffa4.47313974@news.pipeline.com>
Source record: 112898

Following is available:

RCA roller inductors, approx 9" x 5" x 4", value of approx 35 uh,
shaft extends 3/4" front front panel. Silver with double rollers.
3 available @ $50/ea

Tubes (empty state devices):

Amperex 4-250A, European equivalent - 1 avail - used - $25
Penta Labs 5D22/4-250A - 1 avail - used - $40
RCA 4-250A - 1 avail - used - $40

Eimac 304TL - 1 avail - used - $40

Western Electric CW705A/VT255 - 1 avail - used - $10

United 813 - 2 avail - new except for test scratches - $30/ea
National 813 - 3 avail - new - $40/ea
RCA 813 - 4 avail - used - $15/ea

RCA 814 - 1 avail - new - $25

RCA 828 - 4 avail - used - $15/ea

RCA 833A - 1 avail - used - $40

RCA 8008 (mercury vapor rectifier with same ratings as 872A but
different base) - 5 avail - used - $10/ea

Philips 5894 - 1 avail - new - $25

Also, a selection of large wattage (100 watts or greater) wire-wound,
plug in resistors (they look like cartridge fuses) - various values -
INQUIRE.

All tubes are guaranteed 30 days. Shipping is extra - probably about
$5 to $10 per tube. Most of the used tubes are used only in that they
were kept in a test jig.

Alinco DJ160T 2 Meter HT for auction on eBay. Well-used, shows some wear and scratches, but works great. Needs new battery. No box, book, or vinyl case. Has rubber-duck antenna and wall charger. Great first radio for the new Tech, just add a new battery or DC and your're on the air.
Current high bid is $38.
Follow this URL for full description and to bid:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=81074435

Thanks and good luck,
Glen KB1CRN

5251. Re: Problem with Alinco DX70

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-25 00:00:00 UTC
From: Anselmo Stiffan <anselmos@worldcom.ch>
Message-ID: <36FA2638.583EE6AA@worldcom.ch>
Source record: 112902

THIS INFORMATION MAY BE IMPORTANT FOR ALINCO DX70 OWNERS.

The problem of high SWR at full power on 17m band and higher can be
solved
by loading the output with a non inductive resistor. In my case a
1000ohm resistor
cured the problem.

The "varactor" effect on upper bands is due to the collector base
capacitance
of the PA transistors whenever these have low gain. Such effect
generates
spurious frequencies of 1/2 the fundamental frequency and several upper
harmonics
which, loaded with an antenna resonant at the fundamental, generate
substantial
standing waves.

Hopefully Alinco will cure the problem if not already done. My Alinco
DX70 has been purchased
back in Oct 96 and it's very possible that later production is OK.
The DX70 is an excellent transceiver: all reports received confirm a
very good modulation
and all comparisons I did with much more expensive receivers support
my satisfaction.

This mail is also adressed to Alinco Germany for fairness.

It sounds like the input pie network on 10 meter position is damaged
check the silver mica caps they may be burmt In worst case jump out the input
circuit and drive direct in that position let the radio tuner match it .Good
luck.

If the tubes are running red at that power level, then your efficiency must be pretty low. This is indicative that something in the output network is not tuning properly.

The only part of your description that doesn't fit together is that you are getting red anodes with only 100 ma plate current??

Stop spending time on the input side and look at the ouput tuning and loading area. Are the 10 meter bandswitch contacts OK? Also, I once had an SB-200 problem with similar symptoms and it turned out to be the plate RF choke had many shorted turns from being overheated. I had to rewind it with #26 enamelled wire. But, the problem mainly showed up on 75 meters, as I recall, because of the lowered inductance.

Hope this helps,

Al - K8EUR

Figure in the the Next few weeks all the backorders will be filled and you will see a display model at the hams stores. I plan on comparing the features/receiver against similar models side by side at the store. If you go during the week you can sit there and have agrand time and make decision what is best for you unrushed. I also figure the price will fall once the demand has fallen. Remeber the IC-706 and Ic-706 MK II started at $1350
and fell till the $970 price of current.
I figure you will see it going for $1200 in 6 months or a free separation kit etc.

bo>Newsgroups: rec.radio.amateur.equipment,rec.radio.amateur.misc
bo>?? I just got out my Gordon West No-Code book and looked up the
bo>freq-charts in it.. Totally different than what I got off the Icom
bo>website. The 433mhz simplex freqs are shown as repeater freqs in
bo>the book, and most of the rest are also different... "Woe is me.."
bo>What should I do? What should I do?... ;)

Look at the A.R.R.L. 70cm band plan. It is available at www.arrl.org.
Go th the site, go to the site index, go to the B section, and band plans.
You will se a list of band plans. Go to the one for 70cm. I was just
there...there are no FM voice frequencies listed below 444.000Mhz.
444.600Mhz is the national simplex frequency. Band plans can be somewhat
different locally. I also suggests getting a copy of the A.R.R.L. Repeater
Directory. Don't trust the Gordon West book, or the Icom web site. The
chart on the Icom web site was developed by Gordon West! so if it doesn't
agree with the study guide by Gordon West, something is a little screwy
there.

Hi Tony,

I beleive you are a bit ill-informed regarding the early days of WWII and the virtually complete lack of small arms in the British Isles. Litterally THOUSANDS of sporting firearms were donated by concerned American gun owners so that the Brits could defend themselves from Hitler. Seems the government there had curtailed individual rights to bear arms, with predictable results once the bulk of thier "official" arms were lost in Northern France, Singapore, etc. While it wasn't a huge number and they went to Home Guard units, these arms freed up a bunch of Enfields, and a couple of extra divisions made a BIG difference early on. Enough to turn the tide? Probably not, but it's just another example of why an armed citizenry is the best guarantor of Freedom.

Kevin McDonald

5279. ITT Mackay 403A marine lifeboat radio info wanted...

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-26 00:00:00 UTC
From: Randy and Cara Randall <crrandal@seidata.com>
Message-ID: <36FC3023.9A38C1E9@seidata.com>
Source record: 112679

Hello. I have a chance to buy one of these and was
wondering the following:
Is it solid state or tube type?
Is it CW only or if voice capable AM or SSB?
How many watts output?
The approximate age.

This is a marine lifeboat radio with a crank generator and
antenna kit in a portable suitcase.
I thought it might be a novel rig for field day, emergency
use or just for fun. Any info
greatly appreciated.

Randy.

I'd like to buy the 1000H slug @60.00 if it's still available. (that's the
1KW HF 2-30 mc right?)

Please let me have your address so I can send you the $$$$!!!

Thanks - 73 Al W1UX

Fred,

East Coast transistor is Kenwood's east coast parts and service
vendor. There is a west coast vendor too. If they don't have what
you're looking for, start looking for a parts rig! I've bought KW stuff
from ECT.

Dear Mr. Stiglitz, and to those following this thread.
I mean no offense to anyone's personal beliefs (nor do I mean to violate anyone's privacy), however I would like to share a few facts that bear relevance to this discussion.

1)Americans did join the militaries of Canada, Britain (and other free fighting forces in Europe) before the U.S. became officially involved (in both World Wars). Many of these people did bring their own weapons with them, typically handguns to be used as a secondary weapon. While this may have been "officially" frowned upon, most of the allied nations allowed it since they all (minus the U.S.) had a shortage of weapons, which brings me to the second fact:

2) After the British defeat/rout at Dunkirk, the British military was in short supply of weapons (having left most of them on the European beaches). Thousands of americans donated their personal weapons to the British government, as part of a U.S. Gov. sponsored weapons drive. While few of these weapons made it to the front lines in Europe and Asia, they served proudly in the British home guard and reserve/training units, thus freeing-up the purpose-built military arms (made in the US, Canada, Australia, India and the UK) for front line soldiers

3) The pilots and air-crew members of the U.S. military are still allowed to carry personal pistols as part of their survival gear, assuming the firearm meets a few minimum standards.

Now allow me to shift slightly into a philosophical mode:

If a people are disarmed, their freedoms are kept about only through the good will of those who would otherwise take them. I'm sure (ok, its actually just an opinion) that every Albanian in the Balkans wishes he or she had a firearm right now.
I believe it was Jefferson who said "Our freedoms are protected by three boxes: the soap-box, the ballot-box and the cartridge box"

Sincerely,
James Jewell

5290. FT-847 SSB distortion

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-26 00:00:00 UTC
From: MANOS <pelamare@her.forthnet.gr>
Message-ID: <7deke6$eu9$1@medousa.forthnet.gr>
Source record: 112736

Does anyone have any experience using the FT847 for sats having a 2M uplink
and a 440 downlink, when connected to a
70cm/2M antenna system?
When I transmit, I hear distorted audio.
It just sounds very distorted on the FT847 while keying the mic.
I use separate antennas.
It's a real pain, especially if you are trying to hear your echo when
tweaking for sat work...
Can anyone tell me if they are experiencing this as well,i think that it's a
serious problem?

Just insert one end of a 25' wire in the SMA connector or put an alligator clip on one end then clip it to the tip of the supplied antenna.

Enjoy

I use the IC-T2H and it is absolutely FANTASTIC for the price. No experience with harsh weather conditions, but the march issue of QST has several tips on using HT's in cold weather extremes. it's my first and only radio, so i can't really compare it to anything else as far as quality of reliability, but it is quite rugged. I'd go with a separare mobile for a base station, because you can get a single bander for less than the cost of the HT and an amp if cost is the major factor, but 6W (about 4W with alkalines) from the T2H should be plenty. I live in the mountains of SW Virginia and can talk simplex about 20 miles away, you should be able to get out just fine but a heftier base station might be nice.

73, kevin

That's kinda what Gary was infering (about you)

including yours
>Gary. That's what's wrong with this world today, too many people
>sticking their nose into other people's business.

You set the example okay... I mean so we'll know what it looks like when we
see it!

And no, I don't know
>how to activate my filter, wasn't aware I even had one. But seeing as
>how you know it all oh wise one, how about "elmering" me on this
>subject. And then I could filter out your posts.

You 'can' filter his post's... All you have to do it jump aroung them. I on the other hand am having to drop to the bottom of the list to 'find' the thread, as it contains some ongoing dialog I am interested in.

And yes, I can skip
>over threads such as these, and I don't read them.

You don't read what? "BUSTEEEEEDO"

But I have one
>question, what in the hell do boatanchors have to do with shooting
>people?

Well I think you have just won the "Pinko Liberal Award!" Where in this thread have you seen anyone carry on the dialog that pertains to 'shooting people.' My threads, and those of other's have by and large been contained to the subject of our "Inalienable Rights." Please don't attempt to 'group' individuals into what is obviously "your" 'contentious' predisposition on the subject of guns, when the subject matter is deeper than either guns in general, or as you put it, 'shooting people.'

Oversimplification of the 'subject at hand' is boorish at best.

Jon Pearl W4ABC

FOR TRADE....RETAIL VERSION PII 333{NO MOTHERBOARD} WITH ATX {ANTEC MODEL KS-28}MID SIZE TOWER AND SONY CDU311 CDROM DRIVE AND IOMEGA EXTERNAL ZIP DRIVE. I have in the retail box {w/fan and heatsink}few months old Intel PII 333mhz processor that came with a 3 yr warranty {i will include original receipt for your intel warranty}. Also an Antec mid size ATX {Designed for the PII} Tower with power supply and a Sony CDU 311 IDE CDRom drive and an external Iomega zip drive with one blank 100 meg disk. For someone building a PII system, this is a great start. Nothing else is included. I want to trade this for a WORKING {in good shape and non smoking environment}TS 520,TS 820,530 ect or what do you have??..... Remember, this is an incomplete PII system and is intended as a kick start to building your PII system .

Perhaps gross margin? :)

You might look at the Alinco EDX-2. Similar technology, Rated for 200
watts, typically priced at 299.95. Although not obvious from their
brochures, it works with non-Alinco radios too. K9DC

...Only the serial number can make it a TR-7A. But the radios are identical in performance if you have the same options and late revision boards.

Here's an obscure one for the REAL TR-7 experts: Was any TR-7 or TR-7A ever shipped with the band-1 low pass filter installed? I've always assumed it was only included in the commercial versions destined for maritime service. I purchased the components and installed it in my TR-7. Needless to say, if you have to ask me what it is...

I'm considering networking the ham shack computer with those in another part of the house.

Any recommendations with respect to the type of cable (UTP or RG-58) to use? I'm concerned about RF getting into the network cable and messing up the data -and- data signals leaking out and interfering with the HF radios.

TIA, Rick N6CY

I use it to listen Chinese broadcast at 5.95MHz all the time. It works better
than my icom R-1.

Cross-posted to: rec.radio.swap,rec.radio.amateur.antenna,rec.radio.amateur.equipment

FOR SALE: 2m & 6m J-Pole Antennas

These are the classic J-Pole antennas used by countless amateur operators for 2m work; they are inexpensive and rugged. Designed for fixed-station use either outdoors or in an attic. Assembled height is just over 6 ft.

Made from 1/2" rigid copper tubing with an SO-239 Coax connector at the feedpoint. Two-piece design for easy transport - breaks down to less than 40" height. Pre-tuned using an MFJ Antenna Analyzer for center frequency of 146.00 MHz and SWR < 1.5:1 at the band edges. Assembles in under 2 minutes with no special tools (other than a screwdriver). Just assemble, erect the antenna on your support, attach your coax and you're on the air!

Price: $20 each plus $5 shipping/handling (UPS Ground)

A 6m version, made from 3/4" and 1/2" pipe, is also available for $37 plus $5 shipping.

SPECIAL: Buy both the 2m and 6m antennas together for $55 plus $7 shipping. (Save $5)

For more information or to place an order, reply via e-mail.

73,

-Marty KI0LO

It is already a discontinued item.

Grab one if you still can at Radio Shack's close-out price. It is a very
solid 2-meter performer, and accessories (batteries, microphones, et al)
are universally available for it.

5344. Re: RF AND COMPUTER NETWORK

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-26 00:00:00 UTC
From: ME <ME@HERE.COM>
Message-ID: <7dgh60$8k8$1@galaxy.us.dell.com>
Source record: 112790

That's a valid concern....I worked for my local police department for several years and did all of the computer work in the department. We had 8 systems networked with RG58 on a peer to peer network and Win95. We would have some strange errors across the network when sharing info with the court clerk on the other side of city hall. One day I was having coffee in the dispatch room, another officer was called on the radio so he got onto his HT and replied. I noticed that the screen on all the monitors in the comm room blinked when he keyed up, and sure enough, later that day i had to reindex our database due to errors. My only fix was to get my fellow officers to not use the handhelds in the vicinity of the computers. We were running VHF radios, don't know if this is true with UHF and beyond though....

Good luck,
Brian

(plus attached file with the schematic of programmer)

And here is the letter from Bob Koerber to my private E-mail:

>Well glad to piracy is alive and well have fun after all those in
business are
>gone

Hi Bob,
Well, well, well!
Are you really suppose what I am pirate? I'd bought this unit and
can use it for any private purpose, including the schematic diagram
EXCEPT commercial. If you think what my help to other radioamateur
is piracy, I've no words! Are you the author of this schema or you
patented it for yourself only?
Is this "Top secret" or commercial "know how"?
Generally speaking, it is Yaesu (not RTS!!!) programmer, which
produced during many years for professional&amateur use, and you can
find
it at many-many Websites over the world.
Do not worry, be easy. I am NOT pirate!
Igor UN7GM

I have the following for sale or trade:

ITEMS
* Kenwood TH-79A Dual Band HT Serial #60204257 (1995)
* PB-32 6v 600mAh NiCd Battery
* PB-34 9.6V 900mAh NiMh Battery (for 5W output)
* Cigarette Lighter Adapter Pack
* BT-9 Alkaline Cell Pack
* BC-17 Charger
* Soft Case
* Nylon Cord Wrist Strap
* Manual
* Original Box

FEATURES
* Power-on call sign display
* 82 non-volatile memory channels with alphanumeric ID
* Dot-Matrix LCD and menu system
* Encoder/Decoder built-in
* Simultaneous receive on both bands using VHF/UHF,VHF/VHF or UHF/UHF
configuration
* 5 watts power with PB-34, 3 watts with B-32

$275.00 or
I would consider trading for 2 meter Multimode rig.

I have one and I made some out-of-band sensitivity measurements.
There is a problem with the radio receiving images. For example, I
can hear 2 meter repeaters on 241 MHz

Here are some sensitivity measurements that I made on my VX-5R
(ser. num. 8L010040) using an H.P. 8920A

Freq
MHZ Sensitivity Mode

108 .8 uV AM
135 1 uV AM
140 .17 uV NFM
146 .17 uV NFM
223 2.2 uV NFM
250 20 uV NFM
300 28 uV NFM
350 .4 uV NFM
400 .31 uV NFM
450 .25 uV NFM
500 .35 uV NFM
550 17 uV NFM
630 3.5 uV NFM
675 2.25 uV NFM
700 2.5 uV NFM
730 1.8 uV NFM
815 2.2 uV NFM
850 2 uV NFM
910 1.5 uV NFM
962 1.8 uV NFM
989 3.1 uV NFM
998 2.5 uV NFM

levels are based 20 db s/n

I can understand all responces made to the request unknowingly Paul did not reconize the sorce of the ?,
we do have a problem with the cb's getting used wrong and there is no easy fix. Howevever the mods are easily done by a ham or anybody else that gets the info in the future why not deliver the info to a lic. ham via email and not public display it may only keep one radio from being modified for the wrong reason but it is a start.

I have heard that *mildly* abrasive toothpaste heavily diluted with water on a

soft cotton cloth will do the trick, but quite frankly I am afraid this might
cloud the whole damn display so have not tried it. Others have, tho, and swear

by it. Do so at your own risk.

I have had good success with Meguiar's auto cleaner and wax. It has a very mild abrasive to remove surface scratches and leaves a solid protective wax coating when you are done. Works great on cars, too!

Hope this helps,

Al - K8EUR

3M plastic polish (PN 39010) is the best thing I have found, but it only works on fine scratches.
They do make another product called plastic cleaner (PN 39017) which is more abrasive but I have not tried this. It is available at NAPA

I used to feel safe dealing with fellow HAMs with a valid callsign......the last 3 radios I have purchased have had real problems in regards to what I was told was the condition on a scale of 1-10.....I am sick and tired of someone saying that a radio is in #9 condition and receiving what looks like a #5 etc......it seems that people either think a radio is unused #10 or used #9 for all other conditions...what has happened to 1-8?
At least on Ebay you can post a picture of what you are selling, and if you get something funky in buying you can report them sleazebag for ripping you off.....

HAMs have become as sleazy as the rest of the world BUYER BEWARE!

5378. For Sale - CSI Model 9800 MicroPatch (Autopatch/Controller)

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-26 00:00:00 UTC
From: wa4vrv@srv.net
Message-ID: <36fd15a6.764828@news.srv.net>
Source record: 112824

Hi and thanks for reading this posting.

I had originally sold this unit, but the deal fell through, so I am reposting it.

I have a CSI 9800 MicroPatch (with the optional 9801 Electric Voice Delay option which costs $139.95) that is in excellent condition. It has a small wear mark on the paint on the top of the case. Electrically, it is in excellent condition.

This is an autopatch with 90 dialing memories as well as a repeater controller. This is a full-duplex or simplex autopatch. It is very similar to the CSI 800 (which goes for $359.95 without the optional 9801). Too many features to go into, but you can visit the CSI home page and see what it does.

The URL is http://www.connectsystems.com/cs9800d.htm.

The only reason for selling this is that we purchased a CAT-300 and it does what we need. We never used the full features of this MicroPatch.

Original cost was just under $600.00. Will sell for $300.00 shipped in the U.S.

Email or call.

Steve:

The reply you got about microphone choice from Rich N2NMH is right on. A properly matched D104 into a TS830 makes for an absolutely great sounding SSB signal. I did not need to use an amplified D104 or an external audio equalizer. HINT: use a stock D-104 without amplifier. Insert a 500K ohm potentiometer in series with the hot mike wire.
Listen on an external receiver if you can (preferable to the built-in monitor). Then simply rotate the pot and note the wide range of audio responses you get while talking into the mike. Once you find a setting you like, either put the pot in the base of the D104 or measure resistance on the pot and solder-in a fixed reisitor. A lot of guys like to keep the pot so they can vary the microphone response depending on band conditions, etc.

I don't know this model, but the usual lifeboat radio used to be 500
kilohertz CW only. They called them Gibson Girls, ' cause of their
shape -- meant to be held between your legs while you cranked and sent
the Morse Code from the chart. Not a real good bet for Field Day.
500 kilohertz is being phased out as the International Distress
Frequency in favor of satellite links at VHF and UHF. It is probably
a tube radio, if it's the oldie I am thinking of.

5391. Future of HTX-202 in Canada...

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-27 00:00:00 UTC
From: Mike <stonb@sk.sympatico.ca>
Message-ID: <36FDC0CC.2EFF@sk.sympatico.ca>
Source record: 112587

Over the past little while, I've heard rumours flying about the future of the Radio Shack HTX-202. While many people are insisting that it's already been discontinued, why is it still being stocked in Canadian Radio Shack's? Is this discontinuation applicable to the USA only, or is this an international implication?

If anyone here knows anything in regards to the future of the HTX-202 2m Radio Shack Transceiver in Canada, any/all comments and messages would be much appreciated.

Thanks in advance;

Mike (VE5NWO)

It would appear that you accessed usenet via a RemarQ server.
RemarQ provides outsourced usenet services to a number of
ISPs and businesses. Apparently your ISP is one of them.

I had that concern when I networked my machines too. I ran double
shielded coax (RG-214). No interference due to the network has been
noted.

This is a swap group...not a "Ebay rip-off auction" area !!!
Post this Ebay junk somewhere else, please!!

Greetings,

I have a Shure 444D microphone that is new in the box (never been used or had a mic plug installed). What I would like to know is what is it worth or how much could I expect to get for it if I decided to sell? Any assistance would be greatly appreciated. Please respond via e-mail. Thanks in advance.

Anyone know what the story is on all the ICOM equipment which was
purged from Ebay overnight (Fri-Sat)? One note from them said
inapropriate offering, another said impropper bidding. Some
unblocked rigs remain however.

I have an Alinco DR-130 and for an unk reason the DTMF portion of the microphone stopped working. The radio is not used much and not subjected to harsh use. I've check for the obvious loose wire or connection with no luck!!! Anyone ever had the same problem or any suggestions??? Mic works great otherwise would hate to have to buy a completely new mic.

Ebay seems to have its share of problems. Did you know a hacker shut
them down the other day?
See http://www.maximumpc.com/inside_sources/99.3/99.3.20.phtml . Too many
times I have tried to view the auctions and have not been able to get
through - that would be disaster if you were a seller. A lot of prices get
bid way up in the last hour. I have used Ebay and like it, but i hope they
solve their problems!

5443. Re: Kenwood TM-V7A 4s patch cord?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-27 00:00:00 UTC
From: Rick Pemble <pemble@earthlink.net>
Message-ID: <7djnmc$5oi$1@ash.prod.itd.earthlink.net>
Source record: 112675

This pops up about twice a month on this newsgroup. The cable is more than a patch cord, it contains electronics in the hood of the DB-25. It plugs into the packet connector. The electronics is assumed to be level converters (although it may be a RS232 to audio converter as it plugs into the packet connector which is expecting to pass and receive packet audio tones to a TNC).

No one has been able to publish a schematic. They do seem to be hard to come by -- Europeans tell me that they can't be had at all there.

I bought mine at AES -- (and they ship internationally). I have used it to program my TM-V7A and my TM-G707A, both with the free software that Kenwood provides on their web site. It works FB.

Good luck

Rick W4RP

Yep:

Found More Motorola Factory Rib Boxes,(RLN400*B's) "Brand New" Still in the box with the Original Instructions, Antic-Static Bag, and Original Carton. All Late Code Dates (Still within Factory Warrantee).

Asking $175.00 + Shipping ($8.00) covers Pirority Mail, Insured, With return Receipt Requested. As a Bonus, I have a Few OEM Power Supplies that I will supply for $15.00 Extra, or I can give you a similar one with plug for $10.00, but you have to solder on the plug.
==========
Also there appears to be number of Clone Cables for the" Maxtrac" , All Brand New, appear to be well built, but Most know how I feel about Clones. $30.00ea, however these have a "Heavy Duty" support for the modular plug, and also a Strain Relief at the DB 25 pin connector, All pins Gold Plated....Pretty Nice Cable Set for a Clone.
==========
For a Picture of the Cable Go too:

http://www2.4dcomm.com/metrotech/maxtrac2.jpg

Terms:

Acceptable PrePayment in the form of a Postal Money Order or other mutaul Piror arrangements. Persons already in the data base do not have to worry about Money Orders, Personal Checks A-OK

Someone once said that a piece of silk was good for removing minor scratches
or surface dulling. Certainly worth a try before trying the more abrasive
products.
LOL

THE FUN AND EASY WAY TO MAKE MONEY

(I couldn't believe this actually worked)

I found
this on a bulletin board and decided to try it. A
little while
back, I was browsing through newsgroups,
and came across an article similar to
this that said you could make thousands of dollars
within weeks with only an initial investment of $6.00!
So I
thought, "Yeah right, this must be a scam", but
like most of us, I was curious, so I kept reading.
Anyway, it
said that you send $1.00 to each of the 6 names
and address stated in the article. You then place your
own
name and address in the bottom of the list at #6,
and post the article in at least 200 newsgroups. (There
are
thousands) No catch, that was it. So after
thinking it over, and talking to a few people first, I
thought
about trying it. I figured: "what have I got to
lose
except 6 stamps and $6.00 right?" Then I invested the
measly $6.00. Well GUESS WHAT!?... within 7
days, I started getting money in the mail! I was
shocked! I
figured it would end soon, but the money just kept
coming in. In my first week, I made about $25.00. By
the
end of the second week I had made a total of over
$1,000.00! In the third week I had over $3,000 and
it's
still growing. This is now my fourth week and I
have made a total of just over $8,000 and it's
still
coming in rapidly. It's certainly worth $6.00, and 6
stamps, I have spent more than that on the lottery!!
Let me
tell you how this works and most importantly,
WHY it works... Also, make sure you print a copy of
this

article NOW, so you can get the information off
of it as you need it. I promise you that if you follow
the
directions exactly, that you will start making more
money than you thought possible by doing something so
easy! Suggestion: Read this entire message
carefully! (print it out or download it.) Follow the
simple
directions and watch the money come in! It's easy.
It's legal. And, your investment is only $6.00 (Plus
postage)
IMPORTANT: This is not a rip-off; it is not
indecent; it is not illegal; and it is 99% no risk -
it really
works! If all of the following instructions are
adhered
to, you will receive extraordinary dividends. PLEASE
NOTE:
Please follow these directions EXACTLY,
and $50,000 or more can be yours in 20 to 60 days.
This
program remains successful because of the honesty
and integrity of the participants. Please continue
its
success by carefully adhering to the instructions.
You
will now become part of the Mail Order business. In
this
business your product is not solid and tangible, it's
a
service. You are in the business of developing Mailing
Lists.
Many large corporations are happy to pay big
bucks for quality lists. However, the money made from
the
mailing lists is secondary to the income which is
made from people like you and me asking to be included
in
that list. Here are the 4 easy steps to success:
STEP 1: Get 6 separate pieces of paper and write the
following on each piece of paper "PLEASE PUT ME
ON YOUR MAILING LIST." Now get 6 US $1.00 bills and place
ONE inside EACH of the 6 pieces of
paper so the bill will not be seen through the envelope
(to
prevent thievery). Next, place one paper in each
of the 6 envelopes and seal them. You should now have 6
sealed envelopes, each with a piece of paper
stating the above phrase, your name and address, and a
$1.00 bill. What you are doing is creating a

service.
THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate
service and you are paying for it! Like
most of us I was a little skeptical and a little
worried about
the legal aspects of it all. So I checked it out
with
the U.S. Post Office (1-800-725-2161) and they
confirmed
that it is indeed legal. Mail the 6 envelopes to
the
following addresses:

#1)E. Jones 1900 Sycamore Ln. Durham, CA. 95938

#2) L.C. Wood 1909 Laurel Ln. Plano, Tx. 75074

#3) T. Schmit 2100 Date St. #1206 Honolulu, Hi. 96826

#4)K. Walker 3435 S. 173rd Street Seattle, WA 98188

#5) G. Perry GPO Box 119 Hampton 3188, Vic, Aus

#6)D. Flynn 9914 182nd Ct NE Redmond, WA 98052

STEP 2: Now take the #1 name off the list that you
see
above, move the other names up (6 becomes 5, 5
becomes 4, etc...) and add YOUR Name as number 6 on the
list. STEP 3: Change anything you need to, but
try to keep this article as close to original as
possible. Now,
post your amended article to at least 200
newsgroups. (I think there are close to 24,000 groups)
All
you need is 200, but remember, the more you
post, the more money you make! You won't get very much
unless you post like crazy. :)This is perfectly
legal! If you have any doubts, refer to Title 18 Sec.
1302 &
1341 of the Postal lottery laws. Keep a copy of
these steps for yourself and, whenever you need money,
you can use it again, and again. PLEASE
REMEMBER that this program remains successful because of
the honesty and integrity of the participants
and by their carefully adhering to the directions. Look
at it
this way. If you are of integrity, the program will
continue and the money that so many others have
received
will come your way. NOTE: You may want to
retain every name and address sent to you, either on

a
computer or hard copy and keep the notes people
send you. This VERIFIES that you are truly providing a
service. (Also, it might be a good idea to wrap the
$1 bill in dark paper to reduce the risk of mail theft.)
So, as
each post is downloaded and the directions
carefully followed, six members will be reimbursed for
their
participation as a List Developer with one dollar
each. Your name will move up the list geometrically so
that
when your name reaches the #1 position you
will be receiving thousands of dollars in CASH!!! What
an
opportunity for only $6.00 ($1.00 for each of the
first six people listed above) Send it now, add your
own
name to the list and you're in business!
---DIRECTIONS ----- FOR HOW TO POST
TONEWSGROUPS------------ Step 1) You do not need to
re-type this entire letter to do your own posting.
Simply put
your cursor at the beginning of this letter and
drag your cursor to the bottom of this document, and
select
'copy' from the edit menu. This will copy the
entire letter into the computer's memory. Step 2) Open
a
blank 'notepad' file and place your cursor at the
top
of the blank page. From the 'edit' menu select 'paste'.
This
will paste a copy of the letter into notepad so
that
you can add your name to the list. Step 3) Save your
new
notepad file as a .txt file. If you want to do your
postings in different settings, you'll always have this
file to
go back to.Step 4) Use Netscape or Internet
explorer and try searching for various newsgroups
(on-line
forums, message boards, chat sites, discussions.)
Step 5) Visit these message boards and post this
article as
a new message by highlighting the text of this
letter and selecting paste from the edit menu. Fill in
the
Subject, this will be the header that everyone sees

as
they scroll through the list of postings in a particular
group,
click the post message button. You're done with
your first one! Congratulations...THAT'S IT! All you have
to
do is jump to different newsgroups and post
away, after you get the hang of it, it will take
about 30
seconds for each newsgroup! **REMEMBER, THE
MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU
WILL MAKE! BUT YOU
HAVE TO POST A MINIMUM OF 200** That's it! You will
begin receiving money from around the
world within days! You may eventually want to rent a
P.O.Box due to the large amount of mail you will
receive. If you wish to stay anonymous, you can invent
a
name to use, as long as the postman will deliver it.
JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.
Now, each of the 5 persons who
just sent me $1.00 make the MINIMUM 200 postings, each
with my name at #5 and only 5 persons respond
to each of the original 5, that is another $25.00 for
me, now
those 25 each make 200 MINIMUM posts with
my name at #4 and only 5 replies each, I will bring in
an
additional $125.00! Now, those 125 persons turn
around and post the MINIMUM 200 with my name at #3 and
only receive 5 replies each, I will make an
additional $625.00! OK, now here is the fun part, each
of
those 625 persons post a MINIMUM 200 letters
with my name at #2 and they each only receive 5
replies,
that just made me $3,125.00!!! Those 3,125
persons will all deliver this message to 200 newsgroups
with
my name at #1 and if still 5 persons per 200
newsgroups react I will receive $15,625,00! With an
original
investment of only $6.00! AMAZING! When
your name is no longer on the list, you just take the
latest
posting in the newsgroups, and send out another
$6.00 to names on the list, putting your name at number
6
again. And start posting again. The thing to
remember is: do you realize that thousands of people

all
over the world are joining the internet and reading
these articles everyday?, JUST LIKE YOU are now!! So,
can
you afford $6.00 and see if it really works??
I think so... People have said, "what if the plan is
played out
and no one sends you the money? So what!
What are the chances of that happening when there are
tons of new honest users and new honest people
who are joining the internet and newsgroups everyday
and
are willing to give it a try? Estimates are at
20,000 to 50,000 new users, every day, with thousands
of
those joining the actual internet. Remember, play
FAIRLY and HONESTLY and this will really work.

5463. FS: CUSHCRAFT ARX-270U "2m/440mhz" Fbg 16ft Vertical

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-27 00:00:00 UTC
From: jhulet@aol.com
Message-ID: <19990327035908.11919.00000657@ng124.aol.com>
Source record: 112707

Hello,

I have a "Cushcraft ARX-270 U" dual band (2m/440mhz) antenna for sale in excellent condtion. I have moved from a country location where I needed it to a "in town" location. This antenna is a fiberglass vertical that comes in three sections. It is 16ft total length so you don't have to get it up that far to really get some gain. I used it with a Yeasu FT-50R handheld with 5 watts and was supprised just how far this antenna reaches. It has a shiny white, thick, fiberglass exterior. It has a really heavy duty, thick aluminm base with "U" brackets to connect it to a pole. It comes comes complete with easy to connect SO-239 pigtail. There are also three ariels that protude horizonally from the aluminum base... The quality of this antenna is really something, I have mixed feeling on letting it go... =)

$200.00 firm I'll pay shipping UPS COD...

5465. ICOM PCR-1000 Software Problems

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-27 00:00:00 UTC
From: Paul Telco <paul@telco1.demon.co.uk>
Message-ID: <922534678.1010.0.nnrp-04.9e984783@news.demon.co.uk>
Source record: 112709

Hi,

Is anyone else having trouble with the Software supplied with Icom's otherwise excellent IC-PCR1000?

It installs and loads ok so by normal PC standards I should feel lucky but as the only way of using the PCR1000 is by software I think it should be a lot better.

In detail:

Version 1.03.011 supplied. Also tried version 1.03 (downloaded). Both have similar problems.

1. Auto scan - pause until signal disappears. This must be one of the most used modes but it drops out of auto scan after a short period. This means you can't leave it without constantly watching to check it's still scanning!

2. Memory function. When you find a signal that you want to store to a memory you have to WRITE DOWN THE SETTINGS ON PAPER. If you attempt to select an empty memory location all settings are lost!!! The way round this is to select an empty location before you start searching but that means you can't use an existing memory as a starting point.

3. The manual supplied with the unit is about ten pages long and only describes the most basic functions. The main source of help is the online helpfile but this is also very sketchy.

4. On the main tuning display (component display mode) the font chosen for memory and bank info is too big for the window and does not display properly.

If anyone has found a way round any of these or thinks it may be due to mistake on my part (No I don't think it was a mistake to buy the PCR1000) please let me know. Also I have heard that there is third party software available any experiences of this?

Many Thanks,

Paul Telco

Source record: 112710

I hear you! I have sold one radio over the WEB and had a good experience
but it could have been bad. I think the problem is that there is no
definition of what 1 to 10 means. What is a 1? Is it a working radio
that has been beat to shit. Is it a non-working radio? This is of course
the opposite end of the spectrum. A 10 to me is a new radio, while a 9
is a used radio in like new condition MINT with all the items that came
in the box, including the box. An 8 radio in near mint condition maybe
one visible scratch. A 7 is a radio that works and has been used a lot
the knobs and panel have noticible signs of wear the antenna jacks may
be worn etc. A 6 is that it works and is not pretty. But the pattern is
working and cosmetic. anything less than 5, I consider not working. I
have noticed that people do not put low numbers on radio's that do not
work. Did I mention that 1 is high and 10 is low, this is important.
People only put the numbers on working radio's. I am sure there is a
chart somewhere that has what each category means. I think all my
radio's are a 7 or above? I have no 10's and one 9. This is how I
interpret the numbers and I could be wrong.

> recalls. Its got that going for it, and a 20 year track record. Let's shoot
> for 40 years.
It's a pretty good rig. Good audio and a good punchy signal. Drawbacks:
All kenwoods that age drift some with the internal VFO. It is due to
temp change. The more unstable the temp, the more unstable the rig.
Also only have one tuning speed. And is middle range speed. So when
mobile on a bumpy road can be tricky to get tuned in. But there is good
news for this problem, the VFO-230 and the DFC-230 I believe is the
model. Both will give a stable radio. The 130 uses the same VFO as the
830 and the 530. So any of these PLL VFO's will work between these model
rigs. Also the DFC will give you 4 memories. The VFO-230 gives you 5.
But as the VFO-230 really matches the 830 and 530, I think I would
prefer the DFC for use with a TS-130. It's smaller and can be used
mobile.
The TS-130 was the kenwood competition to the IC-730. Both were out at
the same time and about the same price. I have used both, have 2 friends
who have had 130's for many years. I have had a IC-730 for the same
amount of time. The 130 has a little punchier transmit and audio, but I
prefer the 730 as it has 3 tuning speeds. It's way easier to use mobile.
Also a good bit more stable with it's internal PLL vfo. MK

Oh goodie: Bough mine on Wed, and it starts with 9D04.

Seldom use HT tone squelch on local repeaters (some don't pass the tone,
anyway) nor on simplex. On my base and mobile radios it is a must on my
main repeater due to frequent ducting from another on same freq about
120 miles down the coast

Re AMDS-1E: Bought at noon yesterday, had it working later in the afternoon.

You do need to make a template and put the radio in the clone tx mode to do that.

I did fail the first time. So I unplugged the cables, replugged them a few times, and it worked fine the second try.

Phil

Remove the tip from the "short" antenna. Clip a long wire (10-20 ft) to
the metal end.

Most SW receivers benebit by something better than the built in whips;
and the VX-5R antenna is not designed for those freqs (worse than a
telescoping whip).

Mike, it a good time to buy one at the low price they are asking - but Radio Shack will be putting a Dual Band HT to replace the 202 & 404. Similiar to the Dual Bander they were selling a couple of years ago, but had to pull off the market because of some FCC violation and that they were to easy to modify into police, fire & the celluar bands... also a new dual band mobile is in the works for the future. Sorry, I do not know of the release dates on any of this equipment, but it comes from a reliable source in RS... 73, Rich

Greetings all,

Actually, having something shipped C.O.D. is no real protection for the buyer either. Since U.P.S. doesn't allow you to open the package for inspection before accepting it, there's nothing to keep the seller from packing a cinderblock instead of that nice Icom etc. you thought you were going to get. Bottom line is, the buyer is always the one at most risk. So the old addage applies: " Buyer Beware!"

>73's de SV9ANJ

This isn't unusual. Lots of setups suffer from this. This problem
has been around as long as there have been mode J satellites.
You need a mode J filter in your 70 cm antenna lead to cure it.
Either a high pass or bandpass filter will work as a mode J filter.

The problem is fundamental overload of the 70 cm receiver
by the 2m transmitter. That happens because the input network
of most receivers is a pi-section filter, which has low pass
characteristics, and that lets the strong 2m signal through.
The problem doesn't exist when you run mode B because
the 70 cm transmit frequency is above the cutoff frequency
of the 2m receiver front end. But it is a nuisance for mode J.

The Satellite Experimenter's Handbook has a mode J filter you
can build, and I think several places sell them commercially.
Any 70 cm bandpass cavity will work too. Make sure you're using
a good grade of coax, and keep the 2m and 70 cm coaxes well
separated to avoid cross coupling which could bypass the filter.

Sideways. You get a VHF/UHF all mode that can also work HF.
It won't work HF as well as the TS850SAT, but then the TS850
can't do 2m or 70 cm either.

Source record: 112531

This would be for anyone who does a lot of work on computers.It is a professional model board that will diagnose hardware problems with a PC even if the computer will not boot.The only thing that has to working is the power supply, the processor and the main data bus.It has its own on board bios with three different bios chips in order to diagnose component level problems in IBM PC, XT, AT(286-486 and Pentium) machines.Has indicators on board so you can test even without video card and monitor.Has parallel and serial loop-back test plug and operating manual.I've been told that this sold for over $500 new.Asking $200 plus shipping OBO
Thanks,
Steve KC5ZOS

No nation has been conquered by air power alone. To conquer and hold
territory, ultimately you have to have foot soldiers with rifles standing on it,
contesting it inch by bloody inch with the defenders. That is, you do unless
the defenders are unarmed sheep.

Bandplans vary widely by locality. Don't pay any attention to bandplans
published nationally. They're almost always wrong for your area. Inquire
locally, usually from the local frequency coordinating body, as to the details
of any plan in effect in your area.

>Another question,do you think that puting the optional ssb filters YF-112S-02
>TX +RX i'll solve this problem?
>Thanks Manos SV9ANJ

No. The mode J filter has to be before the receiver front end. Better filtering in the IF doesn't help because it is the front end that is overloading. However, the optional SSB receive filter is worth installing anyway, especially for HF operation. The steeper skirts make the FT-847 a different radio. I don't think the optional Tx filter is worth the money. The stock filter is Ok for that.

There are many different grades/types of RG-6 cable. Belden Cables would be
a good place to look for this data. They have an excellent on-line catalog.
I think their website is: <http://www.belden.com> Click on the
"products & catalogs button.

I know this is not exactly ham radio, but it is to be used for digital modes with the ham station.

I am in need of a 1.44 Meg Floppy Drive that will fit into a Toshiba 425 CDS Laptop.

This is the drive that can be exchanged with the CD-ROM drive.

Does any one have one, or know where one can be found? It is hard to load drivers from a 1.44 M floppy without a drive!

Thanks.

This sounds like features that the new version of ADMS is supposed to have. I'm about to buy ADMS just for the import/export features, but if there is other software available that can do the same thing, then I'm very interested.

By the way, will there be a version for the VX-5R? I have a VX-1R, but I'm primarily looking for software for my VX-5R that has the import/export feature.

Also, since these programs were converted from Linux to DOS, will they run acceptably on DOS running under windows?

The just-shipped version, ADMS-1E, specifically does support the VX-5R, plus all the earlier Yaesu radios that are programmable (VX-1R, FT-50, FT-51, etc.). I picked up a copy at Jun's in LA on Friday and so foar, so good (with my new VX-5R).

There is a downloadable program called EVE that I've read about but not tried. I'm sure another reply will give you more info on that.

This is a rare one in excellent condition. Very few were built. Using only high quality Johnson ceramic caps and Roller Inductor. This tuner handles 2KW output. It has a built in wattmeter and SWR 200Watt and 2000Watt and it has a bypass switch. Outputs for coax or longwire. Case is wrinkle black and front panel is black. No dings no scratches. The counter is very smooth. All connections inside are made using large RG8 coax. Tunes all HF bands $295+shipping.

I HEARD that at least one (the HT) is due out in April. Someone
told me that they EXPECT it to be available at the hamfest in
Raleigh, NC on the 11th, but it may not be quite that quickly.

I had someone in RS looking for the HTX-202 ? for me (the one
that was 199 and went to 120). She said she found 4 and none
were in sellable condition. I guess they've about sold out of
that unit by now.

Anyone knowing of a RS that has any left, I'd like to pick up a
couple.

Phil,

I'm familiar with both ADMS and EVE software...and the copy of ADMS
that you bought was supposed to be sold to me...(just kidding :), I was just
a day too late). Each program does a little bit of something that the other
one doesn't. I'm specifically looking at the import/export features that
I've been
hearing about from ADMS. I'm also interested in knowing if the program that
Frank (from the first post of this thread) described will support the VX-5R
in the future. The programs that he listed only mentioned the VX-1R and
FT-50R.

To Phil and everybody else that purchased ADMS software, I'm interested
in getting you opinion on which interface looks easier to use. If you can,
go to

http://www.geol.com/vx5/

download EVEv120.zip, and at least take a look at the user interface. I'm
not asking any ADMS user to try EVE on their radio, but just asking what
they like or dislike about each user interface. It can't hurt to
ask...especially
since I don't have any ADMS software to work with yet.

And Frank...you probably haven't had a change to reply yet , but I'll
patiently
wait for your news as to whether or not there will a program like
VX1TOOLS.ZIP a
nd/or FT50TOOL.ZIP for the VX-5R.

I think we are going to be putting that theory to the test here shortly,
Gary. I die a thousand death's when individual's see us as intruders on
foreign soil, thinking that we as Americans 'go blindly' while others burn
our flag in retaliation.

Burn my flag today... Tomorrow I will 'still' have the courage of my
convictions to stand my ground knowing that for all it faults, this country
is 'still' the land of milk and honey, and if other's could, they too would
model their government's after that of ours.

The unarmed sheep are on the ground now, and I think they are being lead to
the slaughter!

Source record: 112590

Hi all,
Have a slight (I say slight with tongue in cheek...)
with the SO-239 on the rear of my TS-140S. Every
time I connect any feedline, contact with the threaded
portion of any PL-259 with the threaded portion of the
SO-239 results in a serious drop in reception and I also
seem to have no output whatsoever. On the receiver
side, it almost sounds attenuated (to the extreme of
hearing nothing but white noise rather than strong signals
when only the center conductor is inserted into the SO-239).
On the transmit side, I seem to have nothing (i.e., testing with
friends and they can't hear me at all). Anyhow, I've not gotten
the subchassis off yet to have a look at the connection,
and I'm waiting on my friend to get home so I can examine it
with some real test equipment, but I'm interested in opinions
as to where to start looking and what it might be. Thanks for
your help in advance ya'll.

Run a continuity check at the PL-259 male connector for
a short. You may possibly have a bad installation of the
coax to the connector .... such as center conductor of the
coax shorted to the coax shield.

Good luck!

Source record: 112598

Hello,

I have a "Cushcraft ARX-270 U" dual band (2m/440mhz) antenna for sale in excellent condtion. I have moved from a country location where I needed it to a "in town" location. This antenna is a fiberglass vertical that comes in three sections. It is 16ft total length so you don't have to get it up that far to really get some gain. I used it with a Yeasu FT-50R handheld with 5 watts and was supprised just how far this antenna reaches. It has a shiny white, thick, fiberglass exterior. It has a really heavy duty, thick aluminm base with "U" brackets to connect it to a pole. It comes comes complete with easy to connect SO-239 pigtail. There are also three ariels that protude horizonally from the aluminum base... The quality of this antenna is really something, I have mixed feeling on letting it go... =)

$200.00 firm I'll pay shipping UPS COD...

73!

>greatly appreciated.
>
>Randy.

I've worked with at least two models of Mackay lifeboat radios and I
forget the model numbers. However, I do remember the following:

If it has a cast aluminum case, taller than wide, it was built between
the 1955 and 1975 era. It's vacuum tube and operated CW on 500 and
8364 KHz. It also operated on 2182KHz AM phone.
There's a primitive code key on the front panel and a hardwired
mic/headphone set.

The above model was replace by a plastic/fiberglass cased unit that
was wider than it was tall. It was much lighter and was all solid
state. Operating functions were identical

Power ouput in all cases was just 3 to 5 watts on all modes.

There are too many mugs with callsigns already.

> If you what to buy your personal callsign mug all you will have to do is
> send a check or money order for the amount of the mug plus $4.00 for

I don't mind sending a check since you can't get money out of a check.
What you need if you want to make money is a cheque.

Hi,

When using the DSP 232 TNC from A.E.A. I experience problems with accessing
my mailbox.

When the maildrop is used (e.g. S on1dod) the DSP232 node responds with
"TNC System error. Next instruction address: 0005A136)

Does anybody know precisely with caused this error (and how to solve it) ?

All help is greatly appriciated

This TNC is extremely flaky. I had mailbox problems, could never get it
to work in KISS mode and had random resets like you show above.
AEA went out of business, and while Timewave picked up AEA's TNC lines,
the declined to fix the DSP232.

To fix it, we either need to encourage Timewave to release the source code
or reverse engineer it to we can get working hardware. :-(

Ok,
let's lay this one to rest here. The issue at hand is not weather or not we should be able to have guns, but weather or not we are going to keep giving up our Constitutional rights. As American citizens, we are endowed with certain rights as set forth by the constitution of this country. A constitution that was written by men who had far more intelligence and forsight then any of the morons presently in power today. If we give up ANY of these rights it sets the stage for the powers that be to pick and choose whatever right they want to violate in the future. Where will it stop? Will you soon have to file an environmental statement to fart? Will you be thrown in jail for having any dissenting opinion? How long before we end up nothing more then a cowering mass at the mercy of the govenrment's every whim? If you look at a lot of what has been tried, with respect to censorship and the like, you can get an idea of the supressive agendas a lot of polititions (and their wives, Hello Tipper G.!) have. No, the issue here is not wheather or not to bear arms, the issue here is weather or not we are going to let our constitutional rights be eroded away for the sake of expediency. Anyone who believes unarming american citizens is going to cure all gun related problems is a fool. Criminals and bad people will always be able to procure weapons. It will just mean that joe average will no longer be able to buy a shotgun or hunting rifle at the local Wal-Mart.

Well, if we take away the 'cartridge box" how much longer till we also loose the 'soap box' and the 'ballot box"? I believe that was his point, and is mine.

I would have sent this by email but you seem to have used the Deja News to post your ad. I will offer $650 for the radio if it is in the condition you say it is in. I justify that offer by the fact that your radio has no optional equipment installed. I do see that you said FIRM after the price but you may change your mind later. The only thing that would set your radio apart from all the others being offered for sale is the condition that it is in. Also I would need to talk to you on the phone and get a few references. No insult intended, I am just very careful as to who I send money to.

5570. FS:==>MAXTRAC / RADIUS / R100 PROGRAMMING CABLES<<==

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-28 00:00:00 UTC
From: msisco9939@aol.com
Message-ID: <19990328100338.01180.00000388@ng-fz1.aol.com>
Source record: 112620

Yep:

Found a bunch of Programming Cables for the Maxtrac / Radius Series
mobiles. Most know how I feel about Clones, but these are Atypical of a
Premium Cable. Has the following Features:

A picture of this cable can been seen at:
==========
http://www2.4dcomm.com/metrotech/maxtrac2.jpg
==========
(Just copy, paste, and go) for AOL users

1.Super Durable (and heavy duty) Shrink tubbing around the Modular Plug.
(Even the Factory Cable does not have this support) This Prevents the
wires from being pulled out of the modular plug.
2. DB25 Housing is labled Clearly so it will not get confused with other
similar cables (Like a R100) There is a few of these too.
3. DB25 Housing has a Strain Relief at the housing so it will support the
Flat Ribon Cable from being damaged.
4. Long enough (about 6') so if you have the mobile radio in a vehical that
you may want to program with a LapTop, it is "Long" enough to reach the
mobile radio, while the Programming Computer sits on the seat.

I am looking for a telescoping tubular tower as the type the military uses for mobile operations. It has an integral base and nests down into the base. I believe they are about 30 to 50 feet tall when fully extended. Any help will be appreciated.

Message-ID: <7dll0m$76q$1@nnrp1.dejanews.com>
Source record: 112623

Just got my FT-100 from Texas Towers. What a rig. Unless Icom made some DRASTIC changes in the 706mkIIg, the Ft-100 will blow it away. Haven't found any of the bugs yet, and will take some time to get the manual down, but after owning the first 706, and from the Icom info they sent me, the dsp,70 cm, and lighted front, is nothing compaired to the FT-100!

I have a Kenwood TH-G71A, and I am very pleased with it. I have owned several other Kenwood HT's in the past, and I am happy with the performance. The G71A is a great, solid radio.

I do have 1 complaint. I don't like the way the belt clip connects to the battery pack. The clip broke off and it breaks at the batter pack. I no longer use that clip. I purchased a neoprene "pouch" and that is also a great product.

First things first, do you have the rig set up correctly? Your carrier power should be set to 1/4 of the rated output power of the rig -- for a 100 watt rig, this means 25 watts, for a 150 watt rig this is 37.5 watts. Second, the processor should be turned off. Third, the mic gain should be adjusted so that voice peaks do NOT cause ALC action. ALC action indicates that the positive peaks are being choped off.

I use a TS440 on AM with a D104 (amplified version because of the low impedance of the rig's audio input) with excelent results and no reports of lousy audio. The rising characteristcs of the D104 cut down on the lows and add a little punch.

Amp produces 150w out for 10 in on SSB/CW/FM. 20db low-noise GaAsFET preamp. RF-sense or relay-control switching. Remote control possible through rear-panel connector. Less than one year old, never mobile or portable, never out of my shack, works perfect and looks great (perhaps a little dust). Takes 13.8 vdc. Comes with manual and original packing. Selling because I don't operate much 6m. Price new is $350. Will sell for $295 + shipping. Jan N0JR

Standard C558a Dual Band HT.

5W at 12 VDC
40+ memories (opt. 200+ memories with plug-in chip)
100-200, 300-500 & 800-900 MHz receive (including AM aircraft band)
TX Amateur bands
CTCSS Encode/Decode included
DTMF squelch with Paging
Ten auto-dial memories with TX delay
Scan busy, pause or hold
Call channel both bands
Dual frequency watch
Battery save
Cross-band repeat operation
Scan busy, pause or hold
Scan priority memory channels
DTMF Air Cloning
Two volume & squelch knobs for better control
3-way frequency selection, direct, rotary-up/down, arrow
23 Menu display
Operates from 6.0 to 16 VDC
Dimensions: 6.33" (H) x 2.17" (W) x 1.22" (D)
Weight with battery 12.52 oz

Has a Rapid Charger, and the supplied antenna, battery, and belt clip.
Manual included, but no box.
Also has extended memory module. (100 channels per band.) In Very Good Condition.

$250 obo.
Nate

From: peaster <peaster@connors.cc.ok.us>
Message-ID: <7dp76j$t9d$1@sunhub-tulsa.onenet.net>
Source record: 112442

Hello,
I have an Icom 2710 which I would like to mod for out of band use on 2m and 440. I have a copy of the 1997 ARTSCI 9A Modifications book which contains mods for the 2710 but the graphic on the page doesn't match up to the radio. I am wondering if there were different runs of this radio which we're designed differently. The Serial number is 03823 if that makes a difference. Does anyone have any info that may help me?

Thanks
Mike Peaster

5600. Re: Uniden 2600 mods

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-29 00:00:00 UTC
From: Gary <catlink@erols.com>
Message-ID: <7dpj86$s4n$1@autumn.news.rcn.net>
Source record: 112450

The only way to modify the HR2600 for expanded frequency is to replace the CPU and then do the expanded frequency mod as for the HR2510. I just sold my HR2600 not to long ago. I did the modification myself and will say that you will have to be very carefull in removing the CPU as some of the pins are in solder through holes with solder on the top as well as the bottom. I used a commercial grade desoldering station to replace mine.

Once you do the modification you will get a couple of extra letters when changing bands. I beleive it was (a) through (h). I think (g) was the 11m band. On this band you can change frequencies that follow the pattern and display the channel just as a regular CB. The lowest frequency was only about 26.0 Mhz as I remember it. I hadn't used my HR2600 in years (thats why I sold it) so I don't remember all the details.

I think the HR2510 CPUs are hard to come by but I do have two new and never used CPUs. If you would like to buy one I will sell them for 30 dollars each. Thats the price I paid for them.

Hope this info helps.
Gary

I have six like new Motorola SLK 280 FRS radios. These have the NiMH
rechargable batteries and charger. These are the very best frs radios
currently sold. I want $200 per pair shipped. These are great for
keeping in touch with family or at hamfests. Range is about 2 miles.
If you like to know more about them check the website.

I have posted a reply to this same comment by different folks on other newsgroups --

It covers the WARC bands just fine. It covers the MARS freqs just fine. It covers the
14 Mhz SHARES freq that I check into each week. It doesn't go below 7 Mhz however,
which is a big minus to me, but it is small and I use mine daily with my FT-847, works
fine. I use in on my apartment balcony with a wire counterpoise and have had good
luck with it on 40 thru 6. I have not tried to compare it to the Larsen dualbander I
use on 144/440 though, but if I spend another 80$ on a triplexer, I am sure it would work well there too. Hey, call me cheap, but I already had the duplexer and the
dualbander. :-)

On Fri, 26 Mar 1999 18:34:37 GMT, wcollins@mindspring.com was
lurking in rec.radio.amateur.equipment, and composed the
following about "Display Scratches":

> Hi everyone,
>
> I have several small superficial scratches on the display of my FT-51 and
> wonder if there are any products that could remove these scratches safely.
> Thanks in advance.
>
> Bill Collins

On the real side of life...

I've tried pumice, rottenstone, polishing toothpaste, abrasive
hand soap, jewelers's rouge, and lord knows what else-

The best working stuff I've found is a two part system by NOVUS,
the people that repair car windshields. They have a two-part
plastic polishing system that has never failed for me, and it
really brings the clarity and gloss back.

The main problem is trying to find it; I got lucky at a second
hand shop. The second problem it that it's kind of expensive,
about $45-50 for the two bottles (from Novus), but it works
without any damage, and even gets out pretty bad scratches and
chemical burns. Not too much help on heat burns or deep gouges,
though.

The second best was the rottenstone mixed with a little water and
a touch of dish detergent as a lubricant, using felt as the
polishing cloth. I understand it might have worked better if I'd
used linseed oil instead of water & detergent.

Message-ID: <19990329005036.04256.00001679@ng117.aol.com>
Source record: 112497

Hello,

I have a "Cushcraft ARX-270 U" dual band (2m/440mhz) antenna for sale in excellent condtion. I have moved from a country location where I needed it to a "in town" location. This antenna is a fiberglass vertical that comes in three sections. It is 16ft total length so you don't have to get it up that far to really get some gain. I used it with a Yeasu FT-50R handheld with 5 watts and was supprised just how far this antenna reaches. It has a shiny white, thick, fiberglass exterior. It has a really heavy duty, thick aluminm base with "U" brackets to connect it to a pole. It comes comes complete with easy to connect SO-239 pigtail. There are also three ariels that protude horizonally from the aluminum base... The quality of this antenna is really something, I have mixed feeling on letting it go... =)

$200.00 firm I'll pay shipping UPS COD...

73!

I also use a TS-570D, and perhaps can shed some light on this.
Or perhaps not.

> When he switches the DSP function on there is an increase in
> noise,similar to a RX which is suffering from crossmod.ie a type of
> hetrodyning, whistling sound.

That will commonly happen when you tune around SWB stations in CW
(which is irritating) and SSB (which is extremely irritating). The
howling sound is normally right at the front and back end of the 5khz
range the broadcaster is present on. Annoying, but it happens to me as
well. The best answer I have found is to use the Beat Cancel function.
It doesn't eliminate the shrill whistling, but it makes it bearable to
tune over.

> So he has asked to to post this on the news group to see if anyone else
> is suffering from the same problem.

Yes, indeed. And I wonder if your friend is having that problem
mostly on 40 meters? That's where I get killed, at night, when Euruope,
Asia and the Caribbean crush the band with SWB.

Adam, if you talking about switching the NR on in SSB that may just be true. I have a 570DG model and noticed this the first time I used it; However in the upgrade from a 570D to the 570DG they made some worthwhile improvements. Menu item 51 allows you to adjust the level of noise reduction which worked for me, On the 570D the level is fixed. The 570D has 46 menu items where the 570DG has 51 menu items and some improvements.

It seperates the battery from the radio. You use the front of the radio as a speaker mic.

Try looking under www.qrz.com, and goto the radio mods section; I think
they have might have the mod that you are looking for. Also, try doing
a search for radio mods or cb mods; there are alot of mods out there and
I know that I have seen the mod that you are looking for.

I am looking for a radio that can receive AM/FM and VHF/UHF.
VHF is easy, but finding one with UHF is a challenge. Do they exist?
If not, what are my alternatives? Thanks for any information.

Ralph

I have one of these (got it on the $100 closeout by Timewave), and when I got it, the person I spoke with said that Timewave was working on a fix to correct the features that don't work and to allow the CW to TX as well as RX. Looks like there are about 3000 people who don't have all the promised features. He said that there will be a small cost (about $30) for the upgrades/fixes. That cost will include the board to fix the CW TX/RX problem. Timewave was very upfront about the mailbox not functioning along with other stuff.

Yes, the sensitivity should be excellent on this xcvr. Unfortunately, it is a particularly crappy rig. The scan rate is 4 channels per sec which is 1950's technology. It is such an intermod sponge, it is almost useless as a mobile in and even near large cities. There was a way to desensitize the front end to curb some of the intermod and maybe its been done on the unit you have. The desensitizing also causes you to loose overall sensitivity. It also seems that Kenwood didn't learn much and made the ugly TM-V7A also a slow scanning, intermod ridden rig but now the added feature that you can't read the dial on a bright day when using it mobile. They do continue to have the most bells and whistles of any rig, however. I guarantee that once you restore the sensitivity to your 733, you'll be listening to little but pagers and police and other dispatchers. A higher gain antenna? Then you'll hear nothing but pagers and dispatchers.

You can't make a silk purse out of a sow's ear. I have a 599zxx and I do use it (with a 1000D), occasionally. I will not, post-detection (and in fact, no audio DSP unit can) separate the wheat from the chaff. Yeah, it helps.... a bit, but for for the bucks??? You really have to think about it. I agree, try before you buy!!

Source record: 112332

I got the V7A yesterday in fact!! I asked the same question you had a few times and the same responces came back every time: Good quality, many good features, and sounds good. I will tell you Kenwod came out with NEW PRICES for the month of April!!! The V7A will go UP $20 dollars retail!!
I spent a couple hours setting it up last night and it seems like a great rig. The one thing with all Kenwoods is intermodulation, but not as severe as was entioned to me. Als, i ahev a TH-79A-HP Ht and you can use the HT to control the mobile!! That is great. I also wll use the crossband feature when I work events to save HT battery.
I hope that helps you out. I looked at the IC-2710 and the V7A. I chose the Kenwood.

I think I have all the mod sites on the net and only one of them
suggested that it might be possible to do the 800 meg mod on the 51R,
only because the Jap model has it... He tried but failed. I will post
that mod site if anyone needs it...
Thanks for replying to my posting.

there is a way of making the FT 51 SHOW that it is going to 800 mhz ,
but all its doing is making display, there is no 800 mhz front end
circuitry or amplifier.. so its stone deaf there and it will show that
it is tx'ing, but is actually putting out at 1/2 the freq
now if thery would of put in the needed circuitry we'd be in business

Looking for pass/notch only. No mobile duplexers please. Also I am not looking for any $400-$500 used duplexers, if I wanted to spend new money, I would buy new.

Thanks,

Bob

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from
the crystals used in the conventional single channel
Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. If you wish to
purchase a new receiver with "Plectron-like" signaling
capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

Someone recently asked John Cleese of Monty Python fame what the differences were between the English and Americans. He said:
1. We speak English -- you don't.
2. When we have World Championships -- we invite other countries.
3. When you meet English royalty you only have to get down on ONE knee.

5669. FS Ten-Tec Omni D complete station

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-30 00:00:00 UTC
From: N9IVO <steam@megsinet.net>
Message-ID: <LLdM2.393$_45.7500@news.megsinet.net>
Source record: 112348

I have a complete Omni D, series B station that also includes
both the 12 and 30 meter warc kits(uninstalled) and the instructions
for the kits. I bought the pieces to put this full station
together but have found that I prefer a modern rig so will sell
the Omni station. I think the only piece I don't have is the
tuner and it also does not have the noise blanker. (I hear this
was a rather ineffective noise blanker anyway!)

Omni-D series-B factory upgrade serial # 106
SSB and CW filters were installed with the factory B upgrade.
I have both (30m & 12m) warc kits with instructions (uninstalled)
I got the kits with the rig and a ham on this reflector was kind enough
to supply me with the instructions that came with the kits originally.
I don't have the nerve to attack the installation myself. I'm sure
Ten-Tec would do the installation.

Model 232m matching power supply with the over current
protection kit. (also uninstalled)

Model 243 matching external VFO for working split

Model 645 matching keyer/paddle

Model 705 desk microphone

All manuals are included.
This is a complete station and I won't break it up, so
please don't ask me to.
All equipment is in top-notch shape and works perfectly.
My price is $650 shipped.
It can be seen on my web page.
Just click on the link below and then go to the ham radio
page. I'll also e-mail larger pics on request or if you're from
the Chicago area, you can come check out and operate it
if you like.
Thanks... Mike, N9IVO

I have used a Timewave DSP-59+ with a TS-850 (among other rigs) for several years, and I really like the combination. I mostly use it for ragchewing and digital modes, but occasionally for contesting and DXing. I would still recommend the appropriate optional filters in the 850, but the DSP unit really does make a difference.

I have a TS850SAT with the 1.8 KHz and 500 Hz filters in the first IF
and a 250 Hz filter in the second IF.

My TS850 seems like an excellent cw rig. I purchased the Timewave 599zx
and like it the best on cw. However, my timewave will sometimes blank
the signal out on cw rx if there is another very strong signal nearby.
Has anyone else had this experience? I can usually rx while it
is blanking out by selecting my narrower IF filters or by pressing the
BYPASS button.

My TS850SAT has never been very great during SSB phone contests. I
usually have to use the AIP and engage the Attenuators to keep nearby
stations from eating the rx alive.

Well, I have egg on my face. The FT-51's display shows the 800 freq range but it does not actually receive there. After thinking about it, I seem to remember hearing that the RX circuitry needed to receive up there is not installed in the US version of the radio. I must have been thinking of the FT-530.

I didn't mean to cause so much excitement!

I need to find copies of manuals for the different PL tone boards as used in the Johnson PPL 6000 series radios. These are adjustable by a 10 turn trim pot with resistors that are clipped to change ranges. I need to repair one board and change the range of the other.. One has ED-32 on it and the other has 35431-1. Please respond with email directly to my address. Will gladly pay and copying/shipping costs. Even can use fax or email attachment. Thanks Don KB6GQA

Can only evaluate its use with Kachina 505DSP, has reduced audio
requiring running vol. cont. higher but otherwise it's a fine headset.
Have gotten many fine reports on my transmitted audio. I too use a foot
switch, made it myself.

..just 'cause someone's got a purty picture attached to their offer on ebay
does not guarantee the item will look as nice when the buyer opens up the box!

I received a piece of test equipment that I purchased on ebay (picture
looked good) and the unit had been stored at the bottom of a pond. It was
full of dried/caked mud and cockroach skins. The outside of the unit was
filthy, too.

The outside of the shipping box said SUCKER STUFF.....it sure was.

Your mileage may vary.......

I work for a computer company and I'm amazed how some people ship
pack their monitors when they ship it back to us for service.
Some will put a 17" monitor in a 15" monitor box WITHOUT any padding
around the monitor. Some use wadded up newspaper for padding.
Some use boxes with cardboard so thin, it doesn't hold up.

It should come as no surprise that when people ship things that way,
we receive the item damaged. Fed-Ex, UPS, RPS, ... and other shippers
will not cover damages due to improper packaging. Nor will the
manufacturer cover damages due to improper packing.

I do have a gripe against UPS; When equipment is damaged and it was
packed properly, the UPS Claims Inspector comes up with every excuse
in the book to deny the Claim or they'll say they'll only cover up
to $99. .. Oh great, they trash $3000 worth of equipment and are
willing to pay just $99! So far, I've never seen UPS cover the full
cost of their damages. (Maybe the inspectors I run into are all
jerks or maybe UPS trains their inspectors how to avoid agreeing to
cover any claim.)

On the other hand, Fed-Ex does cover damages when it's their fault.
Fed-Ex overnight is VERY expensive; however they do offer a cheaper
2 day service.

I have a Freeware G.G. Triode RF Amplifier
Prgram on my site you can download. It
will give you the driving Impedance plus Matching
circuit needed plus othe info.

You can generate a 572B *.dat file using the utility
program and a data sheet with the characteristic curves.

See T.A.P. 2.0 on http://www.imaxx.net/~kd9jq

Thank for reading this, I have for sale the following gear, all of it is in excellent condition and works perfectly, includes all documentation, original cartons, hand mics and cables. Non-Smoker owned.

Yaesu FT-1000mp with SP-8 external speaker and MD-100 desk mike, rig was purchased in the spring of 1996, This rig is a 9.8 as 10 being new $2300.00

Yaesu FT-736R VHF/UHF, has 6m, 2m, 1.25cm and 70cm, the rig has all options installed cw filter/keyer unit/ctcss encode/decode, includes SP-767 external speaker & MD-1 desk mic, the front panel is in new condition, the sides of the rig have some minor superficial
scraches in the paint. $1850.00

Yaesu FT-840 with FP-800 speaker/power supply and FC-10 auto tuner, this rig has all options installed includes YF-112A AM filter, YF-112C 500hz CW filter, FM-747 FM Unit and MD-100 desk mic this rig and assc. are a 9.5 out of 10, $1000.00.

Drake L-4 B 10 thu 80 hf amplifier includes extra set of 3-500z pulls untested, higher serial number unit (5313) perfect working condition and in beautiful shape the blue meter filters are still blue, an 9.0 out of 10 the front panel is a 9.8, $800.00 obo.

I also have a tower and antenna package for sale, U-pick up in the Northern Virginia/Wash D.C. area, 40 feet of rohn 25G with house bracket, Glen Martin heavy duty hazer with thrust bearing, Telex 15 foot steel mast, Cushcraft X-7 with 40 meter add on kit, Cushcraft 13B2 2 meter yagi, Cushcraft A50-5S 6m yagi, Yaesu G-800 SDX antenna rotator, five120 foot runs of belden cable, this whole package is about six months old except for the A50-5S which is about 3 years old

I am selling all of the gear to pursue other interest, please e-mail me if you are interested, Jim, AB4D@aol.com

This is fairly easy depending on whether you want a handheld, a desktop or a PC version.
Here's a few of the top of my head.

ICOM: PC-1000, PC-100, R-8500, R 10, R 2
Alinco DJ-X10

That doesn't include HT's with wide receive capabilities. Also here's a short list of other manufacturers: AOR, Oregon Scientific, Uniden, Alpha Delta, Drake, Grundig, MFJ, Sangean, Sony, winRadio and Blauplunk (sp). Most have online sites. I don't know if they all have wideband models, but this is easy enough to find on-line.

5694. FT-847

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-30 00:00:00 UTC
From: gary.THrelfall@littlewoods.co.UK
Message-ID: <TFSGGSDP@littlewoods.co.uk>
Source record: 112381

Yaesu FT-847 for sale, 2 months old, boxed with matching MD-100 desk mic.
£1000 sterling, no offers. Upgrading to FT-1000mp (soon to be M0).
Sorry this ones only for the UK.
Gary G7TOK qthr in 1999 call book and on QRZ.com

Recently did side-by-side comparison with FT-1000mp, TS-850sat, FT-847 and
Icom IC-746 at the local radio club.
FT-1000mp beat all on hf, FT-847 and TS-850 were equal with minor differences,
IC-746 was noticebly the worst. The FT-847 buried the IC-746 alive on VHF, the
SATT front-end filters in the FT-847 make an enormous difference.
The TS-850 had a Collins narrow ssb filter fitted, but the FT-847 only had DSP.
Aerials were full size G5RV and Cushcraft tri-band beam at 70ft for HF and
two Comet beams for 2m and 70cm respectively.
Suffice to say, the general consensus was that the IC-746 was a stinker !
The owner, a G6` licenced in 1936 was best not pleased, the upshot is,
he sold the IC-746 and has invested in an FT-1000mp (these CW guys eh!!!)
The only reason to buy a 746 is for the magnificent display.

Cheers, Gary.

FYI -

I've owned 3 FT-51's and they all receive 800+ (cell-blocked). I can listen to my city's PD at around 860 MHz with no problem. It does take a mod to get there, however. I can't remember for sure if the radio will also go up into the 900 MHz range or not, but I think it does.

Bill - you have already done some homework, because your "short list" includes very good radios...

It is time to join your local Amateur radio club! There you will meet folks who desire to do exactly what you want to do in your region. You will see old and newer equipment, and get first-hand accounts of how they perform in YOUR area under real-world conditions.

And while I'm spending your money for you <grin>, you should also join the ARRL. I believe all the HTs you listed have been reviewed in their month magazine, QST. And back issues' reviews are now available for ARRL Members ONLINE as a membership benefit.

- Clint Bradford, ATTENTION to Details
http://www.clintbradford.com

P.S. - Of the dual-banders, I really enjoy my FT-50RD from Yaesu. VERY ergonom for a medium-to-large male hand. Resting comfortably in your left hand, you can key the mike, open squelch, turn on the lamp, change channels...by using just your thumb. Coupled with the ADMS programming software package, I use my FT-50RD daily and haven't been disappointed.

> For Sale: Standard C558a Dual Band HT.

Wow...this is the first dual-band HT I purchased a few years ago. It is a great unit. Although it may be "dated" in manufacturing years, it has darned near everything ANY Amateur would ever need in an HT.

Accessories (batteries, speaker-mikes) are universally available from other vendors. This guy cannot be "pleased" to get rid of this HT - it's a winner.

I have a TimeWave 59+ that I have used on several radios (FT980, IC761,
IC775DSP).

The unit does several things, some things better than others. For reduction
of noise it is absolutely phenomenal. For reduction of QRM, especially QRM
which is stronger than the target signal, it is less effective. This stems
from the fact that the filtering activity is post-detection, and the QRM has
already impacted your AGC chain.

On the IC775DSP the unit is of less value, simply because the 775 already
performs these functions back in the IF stages.

Not common. Probably the RF amplifier is out. It should be as good as if
not better than the 251.

5703. My new Icom 756

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-30 00:00:00 UTC
From: scherbe6@airmail.net
Message-ID: <1A232B6AC200F177.7A083033880B8B6F.1F0D425190BE9E6E@library-proxy.airnews.net>
Source record: 112390

I am the proud owner of the 756 so will add these comments for anyone thinking about one.
First - it comes with the usual manual translated from Japanese which leaves about as many questions as it gives answers.
My first displeasure was when I plugged into the existing IC15 power supply that was from my old IC730 and found the 756 did not switch power on the supply. GRRRRRR ... Okay so now I have to do that separately.

Next - in the manual is a statement that if the tuner is activated with no antenna connected then there WILL be damage to the radio. Now I think this is STUPID to the limit. It would have been so easy to detect that situation and guard against damage. I ask you - is there any ham who has not now and then tried to transmit into an open antenna line? To aggravate this situation is the fact that the default condition is for the tuner to automatically activate on a power up. More GRRRRRRRR....

Then last - when the tuner activates, it uses full RF power. I would have thought it would reduce the power out while tuning. I never owned an automatic tuner prior to this one. More GRRRRRRRR...

ON the positive side - I find the spectrum scope very handy in tuning a SSB signal. Being a little hard of hearing I often had trouble getting tuned to another station, but the scope really helps.

Maybe more later....

Ted

> Was the TImewave unit worth what you paid for it?

Hi Joe -- I have the DSP 599ZX and the TS-850SAT. I use it for DXing
mostly, some contesting. It is absolutely superb for slicing up CW
signals. On SSB where there is noise and atmospherics -- it has enabled
me to pull out signals that were in the ESP category. Highly recommended
from this end. However like all things -- I suggest you borrow one and
try it out for yourself.

For example: a fellow DXer here loves his xtal filters -- I hate em --
ring ring. Not so with DSP unit -- but he hates fiddling with controls
-- so to each his own. Before I got the Time Wave -- my CW operandi was
to use CW Reverse setting on the Kenwood (with no xtal filter) -- when
the pilup was too close to the DX station (usual case).

To my ears it beats any of the built in DSP units I've heard -- but
haven't tried them all yet.

Is it worth it -- depends on if you would use it regularly -- I guess --
I do.

I want the opinion's of all. i don't now what take.
I am 1 and half years amateur and I don't have an HF tranceiver. Only that I have it is one HT (DJ-G5). Guys big dilema for take an HF. Small? Big? With all bands? With new technology? From where to start.
I like the FT-1000MP and the TS-870 it is HF with "power"this from big, but I am 19 years old I like very the much the last technology and this two they don't have. For this reason i like the FT-847 I don't believe what can you do with all band and of course with satellite. But and here many tell's that isn't good. From this I go to FT-920 and this I like: big, with 50Mhz, and other feature's. And at the end the small FT-100?, IC-706MKIIG? ,

I don't guys, it is very, very big dillema you understand all the money is much and when you buy, you buy.

Help me tell me youw opinion's to take the last decide.

KOSTAS- SV2CVC

One does have to wonder, not about eBay, but about all of the people that list their stuff on eBay and then come here to make it public knowledge.

If a person is trying to sell their equipment, that's fine. But by listing it at eBay and then trying to lure bidders by placing ads here is just poor netiquette. If a person is looking for something, they will look on eBay themselves, we don't need useless ads tying up bandwidth.

The other thing is that eBay is a for profit company, and the sellers have to pay a fee (a percentage of the selling price I believe), to eBay for the listing. By listing an auction on the newsgroups, isn't that also advertising a for profit public company (something that is also poor netiquette)?

Hello. I have a 106ft tower and several beams that I hope to put on the tower. I'm planning to use some TIC Ring Rotors on the tower, so I can mount the antennas at any height on the tower. Please let me know if you have any good height recommendations for each of these beams. I'm interested in knowing at what heights I should mount them for best performance. Any and all help is appreciated. The antennas I plan to use are:

-2 Element 40m Beam
-5 Element 20m Beam
-5 Element 15m Beam
-5 Element 10m Beam
-3 Element 12m/17m/30m Beam
-30 Element 6m-1.2 GHz Log Periodic (Mounted Vertically)
-30 Element 6m-1.2 GHz Log Periodic (Mounted Horizontally)

In my shack the mark of a good radio is it's receiver. I live within a couple of miles of about 10 serious DXers/contesters/etc, all with grteat antenna farms and competition-grade amplifiers. In this "kilowatt alley" an average receiver just simply folds up, front-end first!

The IC-775DSP simply shrugs it all off, and pulls even the faintest signal out of the noise, even just a few hundred hertz away from a neighbors S9+60 signal. Because of the way Icom has implemented DSP in the low IF, and with the full set of monolithic filters, you can "rebuild" the receiver to literally hundreds of different configurations "on the fly", dealing with whatever hostile rf situation that comes up. You have a lot of the same capabilities to tailor your signal on the transmit side, but in my mind that is secondary to the awesome receiver.

The rig simply astounds me every time I turn it on.

73, Hans, K0HB

>> sideways. Would welcome any opinions. TNX

Depends on where you are going. I have an FT-1000D and an FT-847. For DX'ing nothing beats the receiver of a good radio. And I believe the TS-850 is in that class. Add a Timewave DSP-599zx to the TS-850 and you will have a world class HF setup.

I bought the FT-847 for its size and band coverage. It is a great satellite radio and a fair HF radio, DSP is average, but no FSK support and like all other radios no DSP support for the digital modes.

The '940 cannot properly modulate at 60w, thats why the manual says to set the CAR LEVEL control for 50w. Then, you need to significantly increase the MIC gain position, so that with the meter set to read ALC, you get minimum deflection on voice peaks.

I am certainly glad to hear that. I have been comparing this radio (775) with the Yaesu 1000 d/mp and Kenwood 950, and I can't see that they are in the same class. The ICOM is the only one of the set that can produce 200 watts full duty cycle. I just have never heard where someone had one. I have never seen one displayed at HRO or any other store for that matter. They're never discussed on newsgroups. I never hear one on the air. The only hamfest that I've seen them at is Dayton at the ICOM booth. I never understood why that was.

Of course ask someone at a dealership....fat chance you'll learn anything there.

But the FT1000D is only 50% duty cycle at 200 Watts, isn't it? I
believe it has to be reduced to 100 Watts before it can stay keyed
down. My FT-847 is only 50 Watts continuous duty (100 W @ 50%).

Hi, I don't know the TX mod but I moded my IC-2710H easily w/good results. Take off the cover w/the speaker. Look on the main PCB up by the front. Mine had a white jumper labled W18. I cut it and reset the radio=full vhf/<479Mhz/800 RX. It was easy in mine. Bob, N2LMW.

5756. Commments regarding Timewave DSP add-ons

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-30 00:00:00 UTC
From: Joseph A Rodgers <jarodger@airmail.net>
Message-ID: <2FFC2C0A0F317A70.81EE27B80C591D31.7E2B72DB8BCADB3B@library-proxy.airnews.net>
Source record: 112472
Cross-posted to: alt.ham-radio.dxing,alt.ham-radio.hf,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.misc

Is anyone using a Timewave DSP unit with a late model HF rig such as the following:

TS-850, 870
TS-440-450
FT-890, 990, 1000MP, 1000D
Omni V, VI
IC-761, 765, 781

I would be interested in your comments about how well the Timewave unit works with the receiver audio in these rigs. Do you think that it makes your radio a better radio in that it is easier to use, easier to pull out weak signals, whatever. Do you use rig for ragchewing, DX, contesting?

Was the TImewave unit worth what you paid for it?

5757. tm-733 question

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-30 00:00:00 UTC
From: pbandj606@aol.com
Message-ID: <19990330012939.05006.00002411@ng142.aol.com>
Source record: 112473

I recently got my hands on a Kenwood tm-733 dual band. 440 seems to be working well. The problems is that 2m reception is quite lousy compared to the tm-251 I had in my truck before (ant. & all else the same). Repeaters that used to peg my s-meter all the way to work now only do so at tops of hills. Signal reports I get back are good. Is this common for dual banders compared to monoband, or do I have internal problems? Solutions? Higher gain ant?

Thanks
Paul

5758. new amplifier

Newsgroup: rec.radio.amateur.equipment

Does any company manufacture an hf...all freq amp. which has a built in antenna tuner? I know Alpha does but the 6k price is too steep for me...

Would like 1.3 to 1.5kw output, full auto tune, including antenna and priced around $3,000.

prefer 110-120 power source but will install 220 if necessary.

tnx

5759. For Trade: New iMac Computer

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-30 00:00:00 UTC
From: William Lee <n5wrx@mindspring.nospam.com>
Message-ID: <7dqbgtnoh1@camel21.mindspring.com>
Source record: 112475

I have a new (still under warrenty) iMac computer with the optional 256 Meg memory chip installed and matching SuperDrive disk drive unit. Comes with the following software installed on the hard drive: (the CD's are available)

Adobe PhotoShop 5
Adobe Illusrtator 8
Adobe Pagemaker 6,5
Adobe ImageReady
Adobe PageMill 3.0
Extendus Plug in effects
Extendus Mask Pro
Alain Eye Candy Plug ins
Knockout
Virtiual PC
Typeadelic
Super Goo
Claris Works Office 5.0
FileMaker Pro 4.0

The value of the software far exceeds that of the computer. This computer was won as a prize and used for about 3 hours total.

Will trade it all (plus a little cash) for a HF radio like the Yaesu 920, Kenwood 950, or Icom 756.

Selling for a friend of mine..

Kenwood TS-120S.. Good condition.
With mic and users manual...no mobile bracket.

$275 without power cord, $300 with brand new in bag, full length
power cable.

My friend wants to but a used small rig like an IC-706 or the
like, so if anyone would consider the TS-120 and $$ in trade for
a 706 type rig, please let me know..

Thanks

Steve-WA6GSD

I read somewhere that the Gonset Commander
AM/CW rig will do 160-6m, but all references I
found on DejaNews seem to suggest 80-6m, the
same as the Multi-Elmac AF-68.

I do see that the newer G-76 and G-76a models
were clearly 80-6m. Can someone clarify this for me
please?

Also, what are these rigs running for used these days
and what are the potential "gotcha's", e.g. hard-to-find
tubes, chronic hard-to-replace component failures, etc?

Thanks! & 73,

Since I haven't read many comments here about the new rig I thought I'd add my own. Portland HRO has one set up to play with, and I have on 2 different occasions. Yaesu says the control is so intuitive that you don't need the manual. To access the munu functions and settings I needed the manual. I liked the dsp on CW. I would not need any extra filter for that mode. Didn't mess with VHF or UHF. Conclusion, I'll keep my "706", maybe upgrade to the MK-II some day. Best wishes's's's's's

According to my reference, the Commander covers 1.7 thru 54 MC continuous. The Commander II is listed as continuous coverage from 160 thru 6 meters. Maybe the exact same range, but don't know for sure. In the case of the Commander, it says that 2 coils are provided for 10 thru 80 meters. For the Commander II, it says the same, plus it says you can use an external VFO for 80 thru 10 meters. Both models use a 6146 final. No idea what other tubes are used.

Charles,

I particularly appreciate your message, since it deals with my set up exactly.

Yesterday I recieved a private email, not posted to the ngewsgroup, from another ham with the same setup. He reported problems, which I will quote below:

At Dayton '98, I purchased a TS-570s, and a Heil boom mic (now I have both
elements in boom mics), and had the 'g' mod done to the radio by Kenwood. I
used the monitor function to set up the mics and found that I was always changing settings to accomodate on the air reports. Neither mic element seemed right, and I was not able to set them up so I could ever use the processor. I have both mics and use them successfully with my trusty Icom
IC-737 and use the processor when necessary. The hand mic that came with
the Kenwood works fine, and I can switch on the processor when needed, though I usually use the monitor to check how the audio sounds on transmit.
I am using Heil's mic patch cords for both radios, but at this time, I have gone back to the hand mic for the Kenwood.

Have you experienced any of the stated issues re use with the processor?

Phil

Hey Phil,
Quite the opposite. I have the mic gain set at 80, and the
processor set at 20. Also the mic gain with the processor set
at 80. All reports have been good, to great. There is no
distortion with the processor, I'm told. It just gets LOUD.
Although I seldom need the processor, I have no fear of
cranking everything wide open, if needed. Also, on AM, and FM,
this combo sounds really good.
I borrowed the Heil from a friend. He and everyone else liked
the way it worked on my rig so well, he gave it to me. I am
surprised at the other operators problems.
Your mileage may vary, but I'm hooked.

If I wanted to look at equipment that is being auctioned on Ebay, I'd look on Ebay. But I'm not, so all these Ebay posts are just a waste of Usenet for me.

Plain "forsale" posts, even if inappropriate for the newsgroup in question, at least have some information about what is being sold and the asking price. Articles with nothing but a pointer to Ebay contain absolutely *nothing* of value or even interest.

Dave

5781. FS: New MFK 969 Versa Tuner II

30/300 watt roller-inductor T-match tuner that will match almost any antenna on all bands 160 thru 6. Llighted meter reading peak and average power, SWR and reflected power. Also built-in 4:1 balun and dummy load. Connections for two coax, one single wire, and one double wire antenna, with bypass potion for each. Out of the box less than one month, unused except to test, and it works perfectly. I just don't need it badly enough to keep it. Cost $180, sell $145 + shipping. Jan N0JR

5785. MRF Transistors

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-31 00:00:00 UTC
From: Morris <morris@SPAMsssnet.com>
Message-ID: <922902055.942.48@news.remarQ.com>
Source record: 112237
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.swap

Has anyone found any substitutes for the following transistors with or without minor ckt changes:

MRF-477
MRF-497
MRF-240
MRF-240A

These are used in the Uniden HR2510, HR2600, Radio Shack 2 m, linears and other medium powered radios for the finals. The supplies are getting low and the prices are getting outrages.

Example: the MRF-240A cost with freight from RF parts is $38.+, if you order it from Radio Shack it is $78. + freight and tax. Two years ago I bought 5 for $50. which including the freight.

Thanks.

5786. FS: Yaesu 736R 2m/440 1250.00

Message-ID: <YatM2.349$8m5.767@newsr1.twcny.rr.com>
Source record: 112238

Hi,
I have a YAESU 736R 2m/440 box, manual, w/tek manual,
desk mike (MD-1) ,hand mike, keyer-B, tone board.
I payed $1,879.00 , less mike(MD-1),keyer-B(19.95), tone
board(FTS-8-58.00),Technical supplement. It's 5yr old, not much use. I'd
like to sell it (1200.00)
the Rotor is a (Yaesu G-800SDX) ,instruction manual, the antenna are a 13B2
(2m Cushcraft) and HY-Gain 215s (7030SAT 30EL 435 BEAM) I would sell all or
part of (but not if I don't sell the Radio) so
I'll take 1500.00 for all.
Tom

>STEVE.W3SY@EROLS.COM
>
>

Well, you got yourself a tough choice here

they're both great rigs...

ts-850 somewhat more "digital"
lets you adjust cw pitch ,choose cw sideband
has a much more convenient choices of main knob tuning speeds (step per
revolution)

however international radio has a progressive speed tuning mod for the 990

I am not quite happy with the quality of audio coming out of the 850 regardless
of speaker
specially at higher volume

the 990 has a better audio with ext. speaker

for 10 meter fm op 850 has pl tones easily programmable and 990 does not

if you get an 850 get a DSP-100 optional add on unit specially if you operate
SSB or AM
it makes a world of difference
and can make you sound like a million dollar hi-fi broadcast quality station
with decent mike

but you have to be a control freak to learn how to adjust all the controls ....
(it's fun)

I guess what I'm saying is that a 990 is perhaps somewhat more TRADITIONAL in
its approach and maybe slightly more SOLID ...
less toyish but that's not necesarilly better...

they're both great rigs you should try'em side by side and only then make a
choice...

5788. Re: QST magazine Indexes

I find the letters in the subject line "FA" to be a nice thing for
people advertising ebay articles. If I see FA, I just unmark the post,
and that's that--no wasted time, as I don't care to use ebay (I've used
it before, but the thrill of auctioning doesn't do it for me--I'd rather
deal with the seller directly).

I've noticed that the people selling things on ebay and then posting
stuff in this newsgroup have either used FA in the subject line, or
plainly said something to the effect, for auction on ebay. So, I have
no qualms about people using this newsgroup to post stuff on ebay.

Hello folks,
I have some VHF Gear for sale, the items are as follows:

Kenwood TS-711a 2 meter all-mode AC/DC, 25 watts, mint
shape in and out.
I need $550.00

Mirage B 2516 G 2 meter 25 in 160 out FM/SSB amp. Like new in and out.
I need $200.

Icom IC-551d & matching IC PS20 DC P/S.
Radio is a 6 mtr all-mode, 80 watts out with a very hot receiver.
Power Supply is the matching P/S for the IC-551d, and is in near mint 9/10
I need $550. for all!

Icom IC-251a this rig is the 2 meter all-mode 10 watt out match to the 551d.
But this rig does need some minor VCO work to steady the SSB portion. Icom's
Sr. bench tech said "It's no problem to fix, that's a nice radio"!
I just need to get $200. for that guy.

All gear is 9+ out of 10. If you want it all I will sell it all for $1300.
Buyer pays shipping.
Thanks and 73's

Hello,
I have extra copys of the Sunair GSR-920
HF/SSB Receiver Operation and Maintenance
Manual that I had Copied.
The whole manual was copy at 100 percent,
including the 20 some 11 by 17 two sided
schematics.
If you are getting a GSR-920, this is the
complete manual.
I am asking $30.00 US plus 3.20 for priority
mailing.
if interested email me at
fbohner@rocketmail.com
Thanks,

alt.ham-radio.marketplace,rec.ham-radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.swap,rec.radio.swap

I have a RCI-2950 that I'd like to use for 10m mobile.
It has some problems (bought it that way) and I need to
troubleshoot.

I thought a couple of GIF's I downloaded would get it done
but they had been poorly scanned and are missing large
sections of circuitry.

Scanned schematics are fine, otherwise will pay reasonable
copy and postage as agreed in advance.

Thanks!

For-sale ads for commercial ham gear, via ebay or otherwise, are not
appropriate on rec.radio.amateur.homebrew. Based on your earlier
responses to other people ("MIND YOUR OWN BUSINESS"), this and all other
ads for unrelated equipment you post to the group will be forwarded to
your ISP's postmaster and abuse accounts.

The MFR 477 and 497 are high power replacements for the original low power units. The low power versions are avaliable for about $6 each from mouser electronics. Also NTE offers a free download of their cross reference software, it list the NTE replacement for the original low power versions.

I agree with you Shawn. If I see FA I just don't bother reading the post.
If you visit rec.antique.radio-phono (or whatever it's called) there's as
much stuff for sale there as there are posts about other things. I will
grant you that since this is already being posted in rec.radio.swap, it may
not be as relevant in rec.radio.shortwave, but since he is putting FA in
there I don't think it's a big deal.

Shawn Upton <supton@eece.maine.edu> wrote in article
<37026741.500F@eece.maine.edu>...
| I find the letters in the subject line "FA" to be a nice thing for
| people advertising ebay articles. If I see FA, I just unmark the post,
| and that's that--no wasted time, as I don't care to use ebay (I've used
| it before, but the thrill of auctioning doesn't do it for me--I'd rather
| deal with the seller directly).
|
| I've noticed that the people selling things on ebay and then posting
| stuff in this newsgroup have either used FA in the subject line, or
| plainly said something to the effect, for auction on ebay. So, I have
| no qualms about people using this newsgroup to post stuff on ebay.

you whould be lucky you didn't get one of the first ones that died out of the box. There is a FORUM that I read daily and I hear one sad story after another. All the guys still post stuff but all they can say is how happy they will be to get the radio from being repaired by Yaesu. If you are smart you will cancel your order and wait till they get the bugs out.

Great little dual bander, jut hope your into the menu interface the radio is very easy to operate but to get the real functions you need to spend time in the owners manual. I have had one for about 4 months and I greatly enjoy the seperate data port on front as well as the spectrum analyzer display. Nice radio but like all nice radios it is a bit pricey

Phil,

I bought a Heil Pro Micro headset with the HC-4 mic element for use in the WPX contest last weekend (with my FT-1000D). The transmit audio quality is great! However, I am less than impressed with the headphones. The audio quality seems bandwidth limited, and I had trouble copying the fluttery/weak Europeans. I ended up yanking the headphone jack and using my desk speaker in such situations, with the headphones clamped to my head but not my ears. The copy was much better. I also tried my Yaesu headphones and the copy was fine there as well. I am considering removing the boom and mic from their headset and epoxying onto my Yaesu headphones, which would seemingly give me the best of both worlds. Either that, or try the full-sized Pro Set.

I recently purchased a used Tek 455 A2-B2 'scope. Unfortunately,
when I got it I discovered that both of the Volts/Div scales are
missing. (There are just knobs there.)

Would someone with one of these 'scopes please e-mail me with the
values that correspond to each of the 10 positions? I know they
go from 5mv to 5v, but I have no clue regarding the increments.

AI would also be interested in puchasing replacement scales, if they're
out there somewhere. I'd appreciate repair parts contacts, or I'd
love to hear from someone who has junked one of these 'scope and has
them as spare parts,

Thanks in advance,
Dave

Near mint 160-10 Meter transceiver with digital display, CW filter,
operator and service manuals. Very low hours...it still has the original
final tubes. No problems, a few documented reversable mods added from
Kenwood and QST hints and kinks. Two BNC connectors added on back to allow
external reciever. Asking $350. Local pickup in the Detroit MI area
preferred. I am the second owner (non smoker) and have had it since early
eighties.

5825. Should I choose a TH-79A(D) or IC-W32A?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-31 00:00:00 UTC
From: flying@videotron.ca
Message-ID: <37018df1.594947@news.videotron.ca>
Source record: 112277

Hello,

I'm looking for a high-power dual band HT. Should I choose a Kenwood TH-79A(D) or an ICOM IC-W32A?

The Kenwood TH-79A(D) is verylight weight but I don't know if the system that clip the battery to the radio is durable!? I'm aware of the existance of modification to expend the Rx frequency band. Also, the TH-79A(D) cost less.

The ICOM IC-W32A is heavy (compared to the TH-79A(D)), the system that clip the battery to the body is different (is it better?). Is there any modification to expend the Rx freq band? The IC-W32A cost more.

I'm sure that those 2 radios are comparable, but is there one that stand out from the other?

Thanks for your help :)

Bill,

I have a Ham Radio index that I put together just by copying the appropriate December multiple year indexes. It covers all 268 issues. The last year was a partial and I had to copy the table of contents for all those issues.

I don't know of a downloadable one. I've worked a little on scanning it and OCRing it but little luck so far. It would be a monumental typing task.

If you would like a copy of the Ham Radio Index I can probably get it copied for $6 plus a $1 for shipping. It is 30 double sided pages......Let me know...Rick...W5RH

Hi Phil

I have been using my Heil Pro on my FT920 for about 4 months and just spent a full weekend (20hrs) using it in the WPX contest. I found it extremely comfortable to the point I almost forgot it was there! I have had comparisons with other hand mic's etc and the Heil always gets excellent raps. I use a foot switch with it, which is a must for handsfree contesting. All up one of my better purchases :-)

Cheers....Allan VK2NNN

5830. Still need a copy of Force12 C3S manual

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-31 00:00:00 UTC
From: kc5egg@ix.netcom.com
Message-ID: <7dsce1$1fr@dfw-ixnews9.ix.netcom.com>
Source record: 112282
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.swap

Howdy all,

During Spring cleaning the installation manual for my used Force12 C3S got lost. I was considering installing this antenna and needed the manual for set up. After receiving a rather negitive cut and paste response from Force12 I am appealing to the net community for some help. I not even sure I want this antenna after my experience with the company but if I sell it the new owner will need the same docs.

Thanks for any help.

73 Jerry KK5YY

I have the Kenwood. I got it about 6months ago. I have had noproblems with the belt clip. I use the heck out of the HT. The only gripe I have about the unit is the battery life. I believe the newer ones come with a NiMH, but the one I got is a NiCad. There are many aftermarket dealers that you can get a new one from. I experience minor intermodulation when in major metro downtown areas , but not enough to call it a problem. I love the unit. Have you considered the new Kenwood TH-D7A portable? It is the same price as the 79. The difference is the 7 has a TNC and GPS capabilities. Also size is different. The 79 is slender and a little taller. The 7 is short and deep. Better hurry up and buy because Kenwood changes their prices on 01 Apr 99. The prices will go up $20 retail.
I hope my comments have helped you out. Good luck with your purchace.

Source record: 112288

Hello,

I have a "Cushcraft ARX-270 U" dual band (2m/440mhz) antenna for sale in excellent condtion. I have moved from a country location where I needed it to a "in town" location. This antenna is a fiberglass vertical that comes in three sections. It is 16ft total length so you don't have to get it up that far to really get some gain. I used it with a Yeasu FT-50R handheld with 5 watts and was supprised just how far this antenna reaches. It has a shiny white, thick, fiberglass exterior. It has a really heavy duty, thick aluminm base with "U" brackets to connect it to a pole. It comes comes complete with easy to connect SO-239 pigtail. There are also three ariels that protude horizonally from the aluminum base... The quality of this antenna is really something, I have mixed feeling on letting it go... =)

$200.00 firm I'll pay shipping UPS COD...

("as the unit was in excellent operational condition when it
left here.") I really like this statement! It shows a flair
Where do I begin, first yes I was wrong to ask for my money
back, because I knew by the time I got the radio, 'what' I was dealing

with, it took me 6 weeks to get the radio, he email a story about it being lost at customs, and then how he had to have it repaired in a local shop, these are his statements, look at the one above on how the unit was in
"excellent operational condition " he stated he"used it every day.,", does that fit with his statement he had have it repaired just before he sent it??? While the "radio" was taking 6 weeks to get here , I got in touch with him, and and asked for my money back, I think anyone would after that extended period, he told me he was retired and had spent the money ,(you will notice, there was NOTHING WRONG WITH THE MONEY, AND IT ARRIVED IN A WEEK) So from the gitgo, I knew I was not going to get my money back, there are three things about "all this'' that makes me angry, (one) EBay did not keep a good record of people like this,only later did I get input from others about this guy,(two) I should have never delt with someone out of the US. (three) I see he is his still working his trade.
I , didnot make this up , the radio did not work the first time I hooked it up , and I tried several of his suggestions, I then put it on the shelf, as a reminder to me that there are more dishonorable people "out there" than I like to believe.In the six weeks it took for the radio to get here, I knew just about what his word was worth. As a test of his word , I had the unit checked here in San Antionio, their words , it needs alot of work,,, from 150$ to 200$, does the estimate sound anything like """I
>explained to him that the Back-up Ni-Cad battery would need to be fully
>charged before this stopped ,"""
You can read the above statement in the first part of his comment. One thing I should say , after going thru "six weeks of wondering when that radio would arrive," I decided I would not send it back to him unless I got my money first... after all he got his money first,,, hihihihi You know this isnt all that bad when you can still laugh. If any , out there , still want deal with him. Proceed. I know when I see ""posts"" like this , I always remember the names , and then I do not get involved. So use your best decernment..I will say in closing , I have not been at this long , but you have not heard anyone say I mailed out bad goods. I am not loaded , but I would not dishonor my name for 300$. If concerned about the facts, I will email paper work , I got from Ham store... Chuck Lorentson

Hello,

I have a mint condition 146-4S Arrow Antenna for sale. It is a 4 solid element yagi antenna for 2 meters. It is of excellent quaility. It comes complete with a SO-239 connector for easy hook up. Just connect the coax with standard PL-259 and you are off and running!

I have moved into town and don't need this antenna any longer. It has never been up for any length of time. It has been hanging in my barn.

$35.00 I'll ship

The ARRL has a complete QST index going back to 1915. It's accessible
via the members-only portion of the ARRL website
(http://www.arrl.org/). Alternative, it can be installed in your
computer -- in segments, as you buy the corresponding CDs -- with the
QST View (QST on CD-ROM) product.

A friend once told me of a get even tactic for U.P.S. I have not attempted this but he says it works.

Get a box that has been sent to you by U.P.S. and open it from the end that has no U.P.S. information.
Put a brick in there and seal the box back up.
Address it to your buddy down thw street on the end you just opened and take it to U.P.S.
Set it in the counter with your address down and your buddies address down.
Be sure to insure it for a lot.
You have a Fifty - Fifty chanch of it being delevered back to you.
They will have no clue as to what happened to the package you sent to your buddy and assume it was lost somewhere.

Woops ... Set the box on the counter with your address down and your buddies address UP.

Of course this is fraud and is most illegal.
Talking about it is one thing....You could go to jail for actually doing it.

I have just acquired a nice Bearcat 300 scanner in need of a few repairs. It is working fine and will scan OK when you first turn it on. If you stop the scan and go to manual then try scanning again nothing happens the scan resume and hold buttons are completely unresponsive. I have read all of the repair tips posted on the NG, but found nothing to help. Does anyone have any ideas on what the problem might be? I would also like a copy of the schmetic. Please reply to my email address.

Thanks

Kevin, Are you planning to go to Dayton?
If you are then I would wait and look for a good used radio there.
There will be a lot of reputable dealers at the Dayton Hamvention with many good used radios for sale and Sunday is the best day to get a great deal on one of them. One word of caution.... If you wait till Sunday to buy something it may be gone. Good deals go fast.
If you are dead set on a new radio then mail order is the way to go.
No sales tax!
Just shop around for the best price and then order.

If you want to have to put the radio up to your ear to hear it, get the
79A
If you want a radio that will recieve up to 900 meg with a less intermod
and longer battery life and will do 5 watts out of the box, get the
W32A.
I must warn you , I am a professional, don't try to have an opinion at
home. :-)

No problem Jim, thats what a discussion group is for. I like the 51R but
got a W32A because of the 800 meg recieve, but I would have gotten
another 51R if it could have been modded. I will send you a great mod
page if you want it.

: A friend once told me of a get even tactic for U.P.S. I have not attempted
: this but he says it works.

: Get a box that has been sent to you by U.P.S. and open it from the end that
: has no U.P.S. information.
: Put a brick in there and seal the box back up.
: Address it to your buddy down thw street on the end you just opened and take
: it to U.P.S.
: Set it in the counter with your address down and your buddies address down.
: Be sure to insure it for a lot.
: You have a Fifty - Fifty chanch of it being delevered back to you.
: They will have no clue as to what happened to the package you sent to your
: buddy and assume it was lost somewhere.

This works! A friend had ordered a mountain bike part and had it sent to
my house. Over a YEAR later he dragged out the box, put something in it
and shipped it to CA. It arrived back at my house. UPS could not find
what they did with it. Now before you flame me, he did NOT claim it
against UPS. We figured we'd get in lots of trouble if they eventually
found it.

Hi OM's

I have two Yaesu FT-480R with the same probleme, after power supply "spikes"
are both 2M dead.
The display shows . . . . . or 6 6 6 6 6 and no reaction on VFO tuning, no
RX TX memory or scan.

I suppose the problem is related to the CPU PD-1511, but this part cost
abt. 50 from G-land so I would like to be pretty sure that this is really
the probleme.
What is the price in US if anyone knows ??

Has anyone elese tried to fix this kind off probleme on this rig ??
And do you have a service manual that can be copied ??

Tnx fer any answer and 73's de

Hi, I have 4 Motorola Radius GP300 hand held radios for sale. These units are 10/10. These units also also still under warranty. They are 16 ch @ 4 watts UHF. I really would love to find these radios a better home than my desk. I am asking $275 each or your best offer. I really need to sell these. If you need some good radio in like new condition please e-mail me at (cadezigns@juno.com) or phone me at 903-453-1818 and I would be glad to get you more info.

Thanks
Chris

RICHCOM,

I am not generally a grump, but your method of posting to the newsgroups regarding items you are selling on EBAY is getting tiresome. If someone wnats to peruse EBAY and see what's for sale, fine, but parallel postings to the newsgroups is not appropriate, especially since you have no description in your posts, just a link to EBAY! Based on the number of items you've been selling and parallel posting here, you must be in the business of selling used equipment. In such case, you are violating newsgroup rules twice, once for your own gain, and the second by promoting EBAY.

73, Mike

I use a Heil headset, with a #5 element on my TS-570D/G. Like
it so well, I disabled the amplifier in my D-104, and installed
a #5 element there also. I think you'll be pleased.

Hi, I have 4 Motorola Radius GP300 radios for sale. These radio's are 10/10, UHF, 16 ch. and still under warranty. I am asking $275. each or YOUR VERY BEST OFFER. If you need good radios in like new condition I have them for you. If you are interested you can e-mail me directly at cadezigns@juno.com) or phone me at 903-450-7725 and I will be happy to give you any info I can.

Thanks

Chris A.

5874. Help with a dead TM2550

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-31 00:00:00 UTC
From: n9jvo@my-dejanews.com
Message-ID: <7drr7mier1@nnrp1.dejanews.com>

I recently purchased a Kenwood TM-2550 2 meter rig that does not seem to have any trans output. I can hear the rig on my ht but there is no reading on an external meter. It sounds like the final transistor is dead. The transistor is a Mitsubishi marked M57726. Does any one know where I can find a replacement for this transistor, or maybe a used/different one that will work? Please email me at rick.corgiat@mail.mei.com if you can help. Thanks, Rick - N9JVO

5878. 80m Rotatable Diapole Suggestions

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-31 00:00:00 UTC
From: Tony Heatwole <heatwole@shell.clark.net>
Message-ID: <7drrrs$cq7$6@clarknet.clark.net>
Source record: 112372

Hello. I'm interested in getting a rotatable diapole for 80m, but I can't seam to find one that's still being sold today. I was wondering if anyone had any suggestions for one. All I need is one that will handle 1500w, cover the whole band, and perhaps have a little gain to it. I would prefer a "brand name" item (like Hy-Gain, KLM, KMA, Cushcraft, etc), but let me know if you have any suggestions. Thanks a lot for reading and in advance.

5879. When to buy?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-03-31 00:00:00 UTC
From: kr70657@hotmail.com
Message-ID: <7ds1dsnnm1@nnrp1.dejanews.com>
Source record: 112373

I've been thinking of buying a new rig and am curious about the best time to buy. I know that the AES superfest is coming up, and Dayton is not too far off. Should I buy now, or wait for Dayton. Are there typically good deals around Dayton time?

I am considering the 570D, 706M2, FT847, etc.

Thanks,

Kevin
